Reply to Objection 3. Every creature has a finite and determinate essence. Wherefore although the essence of the higher creature has a certain likeness to the lower creature, forasmuch as they have something in common generically, yet it has not a complete likeness thereof, because it is determined to a certain species other than the species of the lower creature. But the Divine Essence is a perfect likeness of all, whatsoever may be found to exist in things created, being the universal principle of all.

Whether the soul understands all things through innate species?

Ia q. 84 a. 3

Objection 1. It would seem that the soul understands all things through innate species. For Gregory says, in a homily for the Ascension (xxix in Ev.), that “man has understanding in common with the angels.” But angels understand all things through innate species: wherefore in the book *De Causis* it is said that “every

intelligence is full of forms.” Therefore the soul also has innate species of things, by means of which it understands corporeal things.

Objection 2. Further, the intellectual soul is more excellent than corporeal primary matter. But primary matter was created by God under the forms to which it

has potentiality. Therefore much more is the intellectual soul created by God under intelligible species. And so the soul understands corporeal things through innate species.

Objection 3. Further, no one can answer the truth except concerning what he knows. But even a person untaught and devoid of acquired knowledge, answers the truth to every question if put to him in orderly fashion, as we find related in the *Meno* (xv seqq.) of Plato, concerning a certain individual. Therefore we have some knowledge of things even before we acquire knowledge; which would not be the case unless we had innate species. Therefore the soul understands corporeal things through innate species.

On the contrary, The Philosopher, speaking of the intellect, says (*De Anima* iii, 4) that it is like “a tablet on which nothing is written.”

I answer that, Since form is the principle of action, a thing must be related to the form which is the principle of an action, as it is to that action: for instance, if upward motion is from lightness, then that which only potentially moves upwards must needs be only potentially light, but that which actually moves upwards must needs be actually light. Now we observe that man sometimes is only a potential knower, both as to sense and as to intellect. And he is reduced from such potentiality to act—through the action of sensible objects on his senses, to the act of sensation—by instruction or discovery, to the act of understanding. Wherefore we must say that the cognitive soul is in potentiality both to the images which are the principles of sensing, and to those which are the principles of understanding. For this reason Aristotle (*De Anima* iii, 4) held that the intellect by which the soul understands has no innate species, but is at first in potentiality to all such species.

But since that which has a form actually, is sometimes unable to act according to that form on account of some hindrance, as a light thing may be hindered from moving upwards; for this reason did Plato hold that naturally man’s intellect is filled with all intelligible species, but that, by being united to the body, it is hindered from the realization of its act. But this seems to be unreasonable. First, because, if the soul has a natural knowledge of all things, it seems impossible for the soul so far to forget the existence of such knowledge as not to know itself to be possessed thereof: for no man forgets what he knows naturally; that, for instance, the

whole is larger than the part, and such like. And especially unreasonable does this seem if we suppose that it is natural to the soul to be united to the body, as we have established above (q. 76, a. 1): for it is unreasonable that the natural operation of a thing be totally hindered by that which belongs to it naturally. Secondly, the falseness of this opinion is clearly proved from the fact that if a sense be wanting, the knowledge of what is apprehended through that sense is wanting also: for instance, a man who is born blind can have no knowledge of colors. This would not be the case if the soul had innate images of all intelligible things. We must therefore conclude that the soul does not know corporeal things through innate species.

Reply to Objection 1. Man indeed has intelligence in common with the angels, but not in the same degree of perfection: just as the lower grades of bodies, which merely exist, according to Gregory (*Homily on Ascension*, xxix In Ev.), have not the same degree of perfection as the higher bodies. For the matter of the lower bodies is not totally completed by its form, but is in potentiality to forms which it has not: whereas the matter of heavenly bodies is totally completed by its form, so that it is not in potentiality to any other form, as we have said above (q. 66, a. 2). In the same way the angelic intellect is perfected by intelligible species, in accordance with its nature; whereas the human intellect is in potentiality to such species.

Reply to Objection 2. Primary matter has substantial being through its form, consequently it had need to be created under some form: else it would not be in act. But when once it exists under one form it is in potentiality to others. On the other hand, the intellect does not receive substantial being through the intelligible species; and therefore there is no comparison.

Reply to Objection 3. If questions be put in an orderly fashion they proceed from universal self-evident principles to what is particular. Now by such a process knowledge is produced in the mind of the learner. Wherefore when he answers the truth to a subsequent question, this is not because he had knowledge previously, but because he thus learns for the first time. For it matters not whether the teacher proceed from universal principles to conclusions by questioning or by asserting; for in either case the mind of the listener is assured of what follows by that which preceded.

Whether the intelligible species are derived by the soul from certain separate forms?

Ia q. 84 a. 4

Objection 1. It would seem that the intelligible species are derived by the soul from some separate forms. For whatever is such by participation is caused by what is such essentially; for instance, that which is on fire is reduced to fire as the cause thereof. But the intellectual soul forasmuch as it is actually understanding, participates the thing understood: for, in a way, the

intellect in act is the thing understood in act. Therefore what in itself and in its essence is understood in act, is the cause that the intellectual soul actually understands. Now that which in its essence is actually understood is a form existing without matter. Therefore the intelligible species, by which the soul understands, are caused by some separate forms.

Objection 2. Further, the intelligible is to the intellect, as the sensible is to the sense. But the sensible species which are in the senses, and by which we sense, are caused by the sensible object which exists actually outside the soul. Therefore the intelligible species, by which our intellect understands, are caused by some things actually intelligible, existing outside the soul. But these can be nothing else than forms separate from matter. Therefore the intelligible forms of our intellect are derived from some separate substances.

Objection 3. Further, whatever is in potentiality is reduced to act by something actual. If, therefore, our intellect, previously in potentiality, afterwards actually understands, this must needs be caused by some intellect which is always in act. But this is a separate intellect. Therefore the intelligible species, by which we actually understand, are caused by some separate substances.

On the contrary, If this were true we should not need the senses in order to understand. And this is proved to be false especially from the fact that if a man be wanting in a sense, he cannot have any knowledge of the sensibles corresponding to that sense.

I answer that, Some have held that the intelligible species of our intellect are derived from certain separate forms or substances. And this in two ways. For Plato, as we have said (a. 1), held that the forms of sensible things subsist by themselves without matter; for instance, the form of a man which he called “per se” man, and the form or idea of a horse which is called “per se” horse, and so forth. He said therefore that these forms are participated both by our soul and by corporeal matter; by our soul, to the effect of knowledge thereof, and by corporeal matter to the effect of existence: so that, just as corporeal matter by participating the idea of a stone, becomes an individuating stone, so our intellect, by participating the idea of a stone, is made to understand a stone. Now participation of an idea takes place by some image of the idea in the participator, just as a model is participated by a copy. So just as he held that the sensible forms, which are in corporeal matter, are derived from the ideas as certain images thereof: so he held that the intelligible species of our intellect are images of the ideas, derived therefrom. And for this reason, as we have said above (a. 1), he referred sciences and definitions to those ideas.

But since it is contrary to the nature of sensible things that their forms should subsist without matter, as Aristotle proves in many ways (Metaph. vi), Avicenna (De Anima v) setting this opinion aside, held that the intelligible species of all sensible things, instead of subsisting in themselves without matter, pre-exist immaterially in the separate intellects: from the first of which, said he, such species are derived by a second, and so on to the last separate intellect which he called the “active intelligence,” from which, according to him, intelligible species flow into our souls, and sensible species into corporeal matter. And so Avicenna agrees with Plato in

this, that the intelligible species of our intellect are derived from certain separate forms; but these Plato held to subsist of themselves, while Avicenna placed them in the “active intelligence.” They differ, too, in this respect, that Avicenna held that the intelligible species do not remain in our intellect after it has ceased actually to understand, and that it needs to turn (to the active intellect) in order to receive them anew. Consequently he does not hold that the soul has innate knowledge, as Plato, who held that the participated ideas remain immovably in the soul.

But in this opinion no sufficient reason can be assigned for the soul being united to the body. For it cannot be said that the intellectual soul is united to the body for the sake of the body: for neither is form for the sake of matter, nor is the mover for the sake of the moved, but rather the reverse. Especially does the body seem necessary to the intellectual soul, for the latter’s proper operation which is to understand: since as to its being the soul does not depend on the body. But if the soul by its very nature had an inborn aptitude for receiving intelligible species through the influence of only certain separate principles, and were not to receive them from the senses, it would not need the body in order to understand: wherefore to no purpose would it be united to the body.

But if it be said that our soul needs the senses in order to understand, through being in some way awakened by them to the consideration of those things, the intelligible species of which it receives from the separate principles: even this seems an insufficient explanation. For this awakening does not seem necessary to the soul, except in as far as it is overcome by sluggishness, as the Platonists expressed it, and by forgetfulness, through its union with the body: and thus the senses would be of no use to the intellectual soul except for the purpose of removing the obstacle which the soul encounters through its union with the body. Consequently the reason of the union of the soul with the body still remains to be sought.

And if it be said with Avicenna, that the senses are necessary to the soul, because by them it is aroused to turn to the “active intelligence” from which it receives the species: neither is this a sufficient explanation. Because if it is natural for the soul to understand through species derived from the “active intelligence,” it follows that at times the soul of an individual wanting in one of the senses can turn to the active intelligence, either from the inclination of its very nature, or through being roused by another sense, to the effect of receiving the intelligible species of which the corresponding sensible species are wanting. And thus a man born blind could have knowledge of colors; which is clearly untrue. We must therefore conclude that the intelligible species, by which our soul understands, are not derived from separate forms.

Reply to Objection 1. The intelligible species which are participated by our intellect are reduced, as

to their first cause, to a first principle which is by its essence intelligible—namely, God. But they proceed from that principle by means of the sensible forms and material things, from which we gather knowledge, as Dionysius says (Div. Nom. vii).

Reply to Objection 2. Material things, as to the being which they have outside the soul, may be actually sensible, but not actually intelligible. Wherefore there

is no comparison between sense and intellect.

Reply to Objection 3. Our passive intellect is reduced from potentiality to act by some being in act, that is, by the active intellect, which is a power of the soul, as we have said (q. 79, a. 4); and not by a separate intelligence, as proximate cause, although perchance as remote cause.

Whether the intellectual soul knows material things in the eternal types?

Ia q. 84 a. 5

Objection 1. It would seem that the intellectual soul does not know material things in the eternal types. For that in which anything is known must itself be known more and previously. But the intellectual soul of man, in the present state of life, does not know the eternal types: for it does not know God in Whom the eternal types exist, but is “united to God as to the unknown,” as Dionysius says (Myst. Theolog. i). Therefore the soul does not know all in the eternal types.

Objection 2. Further, it is written (Rom. 1:20) that “the invisible things of God are clearly seen... by the things that are made.” But among the invisible things of God are the eternal types. Therefore the eternal types are known through creatures and not the converse.

Objection 3. Further, the eternal types are nothing else but ideas, for Augustine says (QQ. 83, qu. 46) that “ideas are permanent types existing in the Divine mind.” If therefore we say that the intellectual soul knows all things in the eternal types, we come back to the opinion of Plato who said that all knowledge is derived from them.

On the contrary, Augustine says (Confess. xii, 25): “If we both see that what you say is true, and if we both see that what I say is true, where do we see this, I pray? Neither do I see it in you, nor do you see it in me: but we both see it in the unchangeable truth which is above our minds.” Now the unchangeable truth is contained in the eternal types. Therefore the intellectual soul knows all true things in the eternal types.

I answer that, As Augustine says (De Doctr. Christ. ii, 11): “If those who are called philosophers said by chance anything that was true and consistent with our faith, we must claim it from them as from unjust possessors. For some of the doctrines of the heathens are spurious imitations or superstitious inventions, which we must be careful to avoid when we renounce the society of the heathens.” Consequently whenever Augustine, who was imbued with the doctrines of the Platonists, found in their teaching anything consistent with faith, he adopted it: and those thing which he found contrary to faith he amended. Now Plato held, as we have said above (a. 4), that the forms of things subsist of themselves apart from matter; and these he called ideas, by participation of which he said that our intellect knows all things: so that just as corporeal matter by participating the idea of a stone becomes a stone, so our intel-

lect, by participating the same idea, has knowledge of a stone. But since it seems contrary to faith that forms of things themselves, outside the things themselves and apart from matter, as the Platonists held, asserting that “per se” life or “per se” wisdom are creative substances, as Dionysius relates (Div. Nom. xi); therefore Augustine (QQ. 83, qu. 46), for the ideas defended by Plato, substituted the types of all creatures existing in the Divine mind, according to which types all things are made in themselves, and are known to the human soul.

When, therefore, the question is asked: Does the human soul know all things in the eternal types? we must reply that one thing is said to be known in another in two ways. First, as in an object itself known; as one may see in a mirror the images of things reflected therein. In this way the soul, in the present state of life, cannot see all things in the eternal types; but the blessed who see God, and all things in Him, thus know all things in the eternal types. Secondly, on thing is said to be known in another as in a principle of knowledge: thus we might say that we see in the sun what we see by the sun. And thus we must needs say that the human soul knows all things in the eternal types, since by participation of these types we know all things. For the intellectual light itself which is in us, is nothing else than a participated likeness of the uncreated light, in which are contained the eternal types. Whence it is written (Ps. 4:6,7), “Many say: Who showeth us good things?” which question the Psalmist answers, “The light of Thy countenance, O Lord, is signed upon us,” as though he were to say: By the seal of the Divine light in us, all things are made known to us.

But since besides the intellectual light which is in us, intelligible species, which are derived from things, are required in order for us to have knowledge of material things; therefore this same knowledge is not due merely to a participation of the eternal types, as the Platonists held, maintaining that the mere participation of ideas sufficed for knowledge. Wherefore Augustine says (De Trin. iv, 16): “Although the philosophers prove by convincing arguments that all things occur in time according to the eternal types, were they able to see in the eternal types, or to find out from them how many kinds of animals there are and the origin of each? Did they not seek for this information from the story of times and places?”

But that Augustine did not understand all things to be known in their “eternal types” or in the “unchangeable truth,” as though the eternal types themselves were seen, is clear from what he says (QQ. 83, qu. 46)—viz. that “not each and every rational soul can be said to be

worthy of that vision,” namely, of the eternal types, “but only those that are holy and pure,” such as the souls of the blessed.

From what has been said the objections are easily solved.

Whether intellectual knowledge is derived from sensible things?

Ia q. 84 a. 6

Objection 1. It would seem that intellectual knowledge is not derived from sensible things. For Augustine says (QQ. 83, qu. 9) that “we cannot expect to learn the fulness of truth from the senses of the body.” This he proves in two ways. First, because “whatever the bodily senses reach, is continually being changed; and what is never the same cannot be perceived.” Secondly, because, “whatever we perceive by the body, even when not present to the senses, may be present to the imagination, as when we are asleep or angry: yet we cannot discern by the senses, whether what we perceive be the sensible object or the deceptive image thereof. Now nothing can be perceived which cannot be distinguished from its counterfeit.” And so he concludes that we cannot expect to learn the truth from the senses. But intellectual knowledge apprehends the truth. Therefore intellectual knowledge cannot be conveyed by the senses.

Objection 2. Further, Augustine says (Gen. ad lit. xii, 16): “We must not think that the body can make any impression on the spirit, as though the spirit were to supply the place of matter in regard to the body’s action; for that which acts is in every way more excellent than that which it acts on.” Whence he concludes that “the body does not cause its image in the spirit, but the spirit causes it in itself.” Therefore intellectual knowledge is not derived from sensible things.

Objection 3. Further, an effect does not surpass the power of its cause. But intellectual knowledge extends beyond sensible things: for we understand some things which cannot be perceived by the senses. Therefore intellectual knowledge is not derived from sensible things.

On the contrary, The Philosopher says (Metaph. i, 1; Poster. ii, 15) that the principle of knowledge is in the senses.

I answer that, On this point the philosophers held three opinions. For Democritus held that “all knowledge is caused by images issuing from the bodies we think of and entering into our souls,” as Augustine says in his letter to Dioscorus (cxviii, 4). And Aristotle says (De Somn. et Vigil.) that Democritus held that knowledge is caused by a “discharge of images.” And the reason for this opinion was that both Democritus and the other early philosophers did not distinguish between intellect and sense, as Aristotle relates (De Anima iii, 3). Consequently, since the sense is affected by the sensible, they thought that all our knowledge is affected by this mere impression brought about by sensible things. Which impression Democritus held to be caused by a discharge of images.

Plato, on the other hand, held that the intellect is distinct from the senses: and that it is an immaterial power not making use of a corporeal organ for its action. And since the incorporeal cannot be affected by the corporeal, he held that intellectual knowledge is not brought about by sensible things affecting the intellect, but by separate intelligible forms being participated by the intellect, as we have said above (Aa. 4, 5). Moreover he held that sense is a power operating of itself. Consequently neither is sense, since it is a spiritual power, affected by the sensible: but the sensible organs are affected by the sensible, the result being that the soul is in a way roused to form within itself the species of the sensible. Augustine seems to touch on this opinion (Gen. ad lit. xii, 24) where he says that the “body feels not, but the soul through the body, which it makes use of as a kind of messenger, for reproducing within itself what is announced from without.” Thus according to Plato, neither does intellectual knowledge proceed from sensible knowledge, nor sensible knowledge exclusively from sensible things; but these rouse the sensible soul to the sentient act, while the senses rouse the intellect to the act of understanding.

Aristotle chose a middle course. For with Plato he agreed that intellect and sense are different. But he held that the sense has not its proper operation without the cooperation of the body; so that to feel is not an act of the soul alone, but of the “composite.” And he held the same in regard to all the operations of the sensitive part. Since, therefore, it is not unreasonable that the sensible objects which are outside the soul should produce some effect in the “composite,” Aristotle agreed with Democritus in this, that the operations of the sensitive part are caused by the impression of the sensible on the sense: not by a discharge, as Democritus said, but by some kind of operation. For Democritus maintained that every operation is by way of a discharge of atoms, as we gather from De Gener. i, 8. But Aristotle held that the intellect has an operation which is independent of the body’s cooperation. Now nothing corporeal can make an impression on the incorporeal. And therefore in order to cause the intellectual operation according to Aristotle, the impression caused by the sensible does not suffice, but something more noble is required, for “the agent is more noble than the patient,” as he says (De Gener. i, 5). Not, indeed, in the sense that the intellectual operation is effected in us by the mere intellectual operation is effected in us by the mere impression of some superior beings, as Plato held; but

that the higher and more noble agent which he calls the active intellect, of which we have spoken above (q. 79, Aa. 3,4) causes the phantasms received from the senses to be actually intelligible, by a process of abstraction.

According to this opinion, then, on the part of the phantasms, intellectual knowledge is caused by the senses. But since the phantasms cannot of themselves affect the passive intellect, and require to be made actually intelligible by the active intellect, it cannot be said that sensible knowledge is the total and perfect cause of intellectual knowledge, but rather that it is in a way the material cause.

Reply to Objection 1. Those words of Augustine mean that we must not expect the entire truth from the senses. For the light of the active intellect is needed, through which we achieve the unchangeable truth of changeable things, and discern things themselves from their likeness.

Reply to Objection 2. In this passage Augustine speaks not of intellectual but of imaginary knowledge. And since, according to the opinion of Plato, the imagination has an operation which belongs to the soul only, Augustine, in order to show that corporeal images are impressed on the imagination, not by bodies but by the

soul, uses the same argument as Aristotle does in proving that the active intellect must be separate, namely, because “the agent is more noble than the patient.” And without doubt, according to the above opinion, in the imagination there must needs be not only a passive but also an active power. But if we hold, according to the opinion of Aristotle, that the action of the imagination, is an action of the “composite,” there is no difficulty; because the sensible body is more noble than the organ of the animal, in so far as it is compared to it as a being in act to a being in potentiality; even as the object actually colored is compared to the pupil which is potentially colored. It may, however, be said, although the first impression of the imagination is through the agency of the sensible, since “fancy is movement produced in accordance with sensation” (De Anima iii, 3), that nevertheless there is in man an operation which by synthesis and analysis forms images of various things, even of things not perceived by the senses. And Augustine’s words may be taken in this sense.

Reply to Objection 3. Sensitive knowledge is not the entire cause of intellectual knowledge. And therefore it is not strange that intellectual knowledge should extend further than sensitive knowledge.

Whether the intellect can actually understand through the intelligible species of which it is possessed, without turning to the phantasms?

Ia q. 84 a. 7

Objection 1. It would seem that the intellect can actually understand through the intelligible species of which it is possessed, without turning to the phantasms. For the intellect is made actual by the intelligible species by which it is informed. But if the intellect is in act, it understands. Therefore the intelligible species suffices for the intellect to understand actually, without turning to the phantasms.

Objection 2. Further, the imagination is more dependent on the senses than the intellect on the imagination. But the imagination can actually imagine in the absence of the sensible. Therefore much more can the intellect understand without turning to the phantasms.

Objection 3. There are no phantasms of incorporeal things: for the imagination does not transcend time and space. If, therefore, our intellect cannot understand anything actually without turning to the phantasms, it follows that it cannot understand anything incorporeal. Which is clearly false: for we understand truth, and God, and the angels.

On the contrary, The Philosopher says (De Anima iii, 7) that “the soul understands nothing without a phantasm.”

I answer that, In the present state of life in which the soul is united to a passible body, it is impossible for our intellect to understand anything actually, except by turning to the phantasms. First of all because the intellect, being a power that does not make use of a corporeal organ, would in no way be hindered in its

act through the lesion of a corporeal organ, if for its act there were not required the act of some power that does make use of a corporeal organ. Now sense, imagination and the other powers belonging to the sensitive part, make use of a corporeal organ. Wherefore it is clear that for the intellect to understand actually, not only when it acquires fresh knowledge, but also when it applies knowledge already acquired, there is need for the act of the imagination and of the other powers. For when the act of the imagination is hindered by a lesion of the corporeal organ, for instance in a case of frenzy; or when the act of the memory is hindered, as in the case of lethargy, we see that a man is hindered from actually understanding things of which he had a previous knowledge. Secondly, anyone can experience this of himself, that when he tries to understand something, he forms certain phantasms to serve him by way of examples, in which as it were he examines what he is desirous of understanding. For this reason it is that when we wish to help someone to understand something, we lay examples before him, from which he forms phantasms for the purpose of understanding.

Now the reason of this is that the power of knowledge is proportioned to the thing known. Wherefore the proper object of the angelic intellect, which is entirely separate from a body, is an intelligible substance separate from a body. Whereas the proper object of the human intellect, which is united to a body, is a quiddity or nature existing in corporeal matter; and through such

natures of visible things it rises to a certain knowledge of things invisible. Now it belongs to such a nature to exist in an individual, and this cannot be apart from corporeal matter: for instance, it belongs to the nature of a stone to be in an individual stone, and to the nature of a horse to be in an individual horse, and so forth. Wherefore the nature of a stone or any material thing cannot be known completely and truly, except in as much as it is known as existing in the individual. Now we apprehend the individual through the senses and the imagination. And, therefore, for the intellect to understand actually its proper object, it must of necessity turn to the phantasms in order to perceive the universal nature existing in the individual. But if the proper object of our intellect were a separate form; or if, as the Platonists say, the natures of sensible things subsisted apart from the individual; there would be no need for the intellect to turn to the phantasms whenever it understands.

Reply to Objection 1. The species preserved in the passive intellect exist there habitually when it does not understand them actually, as we have said above (q. 79,

a. 6). Wherefore for us to understand actually, the fact that the species are preserved does not suffice; we need further to make use of them in a manner befitting the things of which they are the species, which things are natures existing in individuals.

Reply to Objection 2. Even the phantasm is the likeness of an individual thing; wherefore the imagination does not need any further likeness of the individual, whereas the intellect does.

Reply to Objection 3. Incorporeal things, of which there are no phantasms, are known to us by comparison with sensible bodies of which there are phantasms. Thus we understand truth by considering a thing of which we possess the truth; and God, as Dionysius says (Div. Nom. i), we know as cause, by way of excess and by way of remotion. Other incorporeal substances we know, in the present state of life, only by way of remotion or by some comparison to corporeal things. And, therefore, when we understand something about these things, we need to turn to phantasms of bodies, although there are no phantasms of the things themselves.

Whether the judgment of the intellect is hindered through suspension of the sensitive powers?

Ia q. 84 a. 8

Objection 1. It would seem that the judgment of the intellect is not hindered by suspension of the sensitive powers. For the superior does not depend on the inferior. But the judgment of the intellect is higher than the senses. Therefore the judgment of the intellect is not hindered through suspension of the senses.

Objection 2. Further, to syllogize is an act of the intellect. But during sleep the senses are suspended, as is said in *De Somn. et Vigil.* i and yet it sometimes happens to us to syllogize while asleep. Therefore the judgment of the intellect is not hindered through suspension of the senses.

On the contrary, What a man does while asleep, against the moral law, is not imputed to him as a sin; as Augustine says (*Gen. ad lit.* xii, 15). But this would not be the case if man, while asleep, had free use of his reason and intellect. Therefore the judgment of the intellect is hindered by suspension of the senses.

I answer that, As we have said above (a. 7), our intellect's proper and proportionate object is the nature of a sensible thing. Now a perfect judgment concerning anything cannot be formed, unless all that pertains to that thing's nature be known; especially if that be ignored which is the term and end of judgment. Now the Philosopher says (*De Coel.* iii), that "as the end of a practical science is action, so the end of natural science is that which is perceived principally through the senses"; for the smith does not seek knowledge of a knife except for the purpose of action, in order that he may produce a certain individual knife; and in like manner the natural philosopher does not seek to know the nature of a stone and of a horse, save for the pur-

pose of knowing the essential properties of those things which he perceives with his senses. Now it is clear that a smith cannot judge perfectly of a knife unless he knows the action of the knife: and in like manner the natural philosopher cannot judge perfectly of natural things, unless he knows sensible things. But in the present state of life whatever we understand, we know by comparison to natural sensible things. Consequently it is not possible for our intellect to form a perfect judgment, while the senses are suspended, through which sensible things are known to us.

Reply to Objection 1. Although the intellect is superior to the senses, nevertheless in a manner it receives from the senses, and its first and principal objects are founded in sensible things. And therefore suspension of the senses necessarily involves a hindrance to the judgment of the intellect.

Reply to Objection 2. The senses are suspended in the sleeper through certain evaporations and the escape of certain exhalations, as we read in *De Somn. et Vigil.* iii. And, therefore, according to the amount of such evaporation, the senses are more or less suspended. For when the amount is considerable, not only are the senses suspended, but also the imagination, so that there are no phantasms; thus does it happen, especially when a man falls asleep after eating and drinking copiously. If, however, the evaporation be somewhat less, phantasms appear, but distorted and without sequence; thus it happens in a case of fever. And if the evaporation be still more attenuated, the phantasms will have a certain sequence: thus especially does it happen towards the end of sleep in sober men and those who are

gifted with a strong imagination. If the evaporation be very slight, not only does the imagination retain its freedom, but also the common sense is partly freed; so that sometimes while asleep a man may judge that what he sees is a dream, discerning, as it were, between things, and their images. Nevertheless, the common sense remains partly suspended; and therefore, although it dis-

criminates some images from the reality, yet is it always deceived in some particular. Therefore, while man is asleep, according as sense and imagination are free, so is the judgment of his intellect unfettered, though not entirely. Consequently, if a man syllogizes while asleep, when he wakes up he invariably recognizes a flaw in some respect.

Objection 1. It would seem that the soul does not know bodies through the intellect. For Augustine says (Soliloq. ii, 4) that “bodies cannot be understood by the intellect; nor indeed anything corporeal unless it can be perceived by the senses.” He says also (Gen. ad lit. xii, 24) that intellectual vision is of those things that are in the soul by their essence. But such are not bodies. Therefore the soul cannot know bodies through the intellect.

Objection 2. Further, as sense is to the intelligible, so is the intellect to the sensible. But the soul can by no means, through the senses, understand spiritual things, which are intelligible. Therefore by no means can it, through the intellect, know bodies, which are sensible.

Objection 3. Further, the intellect is concerned with things that are necessary and unchangeable. But all bodies are mobile and changeable. Therefore the soul cannot know bodies through the intellect.

On the contrary, Science is in the intellect. If, therefore, the intellect does not know bodies, it follows that there is no science of bodies; and thus perishes natural science, which treats of mobile bodies.

I answer that, It should be said in order to elucidate this question, that the early philosophers, who inquired into the natures of things, thought there was nothing in the world save bodies. And because they observed that all bodies are mobile, and considered them to be ever in a state of flux, they were of opinion that we can have no certain knowledge of the true nature of things. For what is in a continual state of flux, cannot be grasped with any degree of certitude, for it passes away ere the mind can form a judgment thereon: according to the saying of Heraclitus, that “it is not possible twice to touch a drop of water in a passing torrent,” as the Philosopher relates (Metaph. iv, Did. iii, 5).

After these came Plato, who, wishing to save the certitude of our knowledge of truth through the intellect, maintained that, besides these things corporeal, there is another genus of beings, separate from matter and movement, which beings he called “species” or “ideas,” by participation of which each one of these singular and sensible things is said to be either a man, or a horse, or the like. Wherefore he said that sciences and definitions, and whatever appertains to the act of the intellect, are not referred to these sensible bodies, but to those beings immaterial and separate: so that according to this the soul does not understand these corporeal things, but the separate species thereof.

Now this may be shown to be false for two reasons. First, because, since those species are immaterial and immovable, knowledge of movement and matter would be excluded from science (which knowledge is proper to natural science), and likewise all demonstration through moving and material causes. Secondly, because it seems ridiculous, when we seek for knowledge of things which are to us manifest, to introduce other beings, which can-

not be the substance of those others, since they differ from them essentially: so that granted that we have a knowledge of those separate substances, we cannot for that reason claim to form a judgment concerning these sensible things.

Now it seems that Plato strayed from the truth because, having observed that all knowledge takes place through some kind of similitude, he thought that the form of the thing known must of necessity be in the knower in the same manner as in the thing known. Then he observed that the form of the thing understood is in the intellect under conditions of universality, immateriality, and immobility: which is apparent from the very operation of the intellect, whose act of understanding has a universal extension, and is subject to a certain amount of necessity: for the mode of action corresponds to the mode of the agent’s form. Wherefore he concluded that the things which we understand must have in themselves an existence under the same conditions of immateriality and immobility.

But there is no necessity for this. For even in sensible things it is to be observed that the form is otherwise in one sensible than in another: for instance, whiteness may be of great intensity in one, and of a less intensity in another: in one we find whiteness with sweetness, in another without sweetness. In the same way the sensible form is conditioned differently in the thing which is external to the soul, and in the senses which receive the forms of sensible things without receiving matter, such as the color of gold without receiving gold. So also the intellect, according to its own mode, receives under conditions of immateriality and immobility, the species of material and mobile bodies: for the received is in the receiver according to the mode of the receiver. We must conclude, therefore, that through the intellect the soul knows bodies by a knowledge which is immaterial, universal, and necessary.

Reply to Objection 1. These words of Augustine are to be understood as referring to the medium of intellectual knowledge, and not to its object. For the intellect knows bodies by understanding them, not indeed through bodies, nor through material and corporeal species; but through immaterial and intelligible species, which can be in the soul by their own essence.

Reply to Objection 2. As Augustine says (De Civ. Dei xxii, 29), it is not correct to say that as the sense knows only bodies so the intellect knows only spiritual things; for it follows that God and the angels would not know corporeal things. The reason of this diversity is that the lower power does not extend to those things that belong to the higher power; whereas the higher power operates in a more excellent manner those things which belong to the lower power.

Reply to Objection 3. Every movement presupposes something immovable: for when a change of quality occurs, the substance remains unmoved; and

when there is a change of substantial form, matter remains unmoved. Moreover the various conditions of mutable things are themselves immovable; for instance, though Socrates be not always sitting, yet it is an im-

movable truth that whenever he does sit he remains in one place. For this reason there is nothing to hinder our having an immovable science of movable things.

Objection 1. It would seem that the soul understands corporeal things through its essence. For Augustine says (*De Trin.* x, 5) that the soul “collects and lays hold of the images of bodies which are formed in the soul and of the soul: for in forming them it gives them something of its own substance.” But the soul understands bodies by images of bodies. Therefore the soul knows bodies through its essence, which it employs for the formation of such images, and from which it forms them.

Objection 2. Further, the Philosopher says (*De Anima* iii, 8) that “the soul, after a fashion, is everything.” Since, therefore, like is known by like, it seems that the soul knows corporeal things through itself.

Objection 3. Further, the soul is superior to corporeal creatures. Now lower things are in higher things in a more eminent way than in themselves, as Dionysius says (*Coel. Hier.* xii). Therefore all corporeal creatures exist in a more excellent way in the soul than in themselves. Therefore the soul can know corporeal creatures through its essence.

On the contrary, Augustine says (*De Trin.* ix, 3) that “the mind gathers knowledge of corporeal things through the bodily senses.” But the soul itself cannot be known through the bodily senses. Therefore it does not know corporeal things through itself.

I answer that, The ancient philosophers held that the soul knows bodies through its essence. For it was universally admitted that “like is known by like.” But they thought that the form of the thing known is in the knower in the same mode as in the thing known. The Platonists however were of a contrary opinion. For Plato, having observed that the intellectual soul has an immaterial nature, and an immaterial mode of knowledge, held that the forms of things known subsist immaterially. While the earlier natural philosophers, observing that things known are corporeal and material, held that things known must exist materially even in the soul that knows them. And therefore, in order to ascribe to the soul a knowledge of all things, they held that it has the same nature in common with all. And because the nature of a result is determined by its principles, they ascribed to the soul the nature of a principle; so that those who thought fire to be the principle of all, held that the soul had the nature of fire; and in like manner as to air and water. Lastly, Empedocles, who held the existence of our four material elements and two principles of movement, said that the soul was composed of these. Consequently, since they held that things exist in the soul materially, they maintained that all the soul’s knowledge is material, thus failing to discern intellect from sense.

But this opinion will not hold. First, because in the material principle of which they spoke, the various results do not exist save in potentiality. But a thing is not known according as it is in potentiality, but only ac-

ording as it is in act, as is shown *Metaph.* ix (*Did.* viii, 9): wherefore neither is a power known except through its act. It is therefore insufficient to ascribe to the soul the nature of the principles in order to explain the fact that it knows all, unless we further admit in the soul natures and forms of each individual result, for instance, of bone, flesh, and the like; thus does Aristotle argue against Empedocles (*De Anima* i, 5). Secondly, because if it were necessary for the thing known to exist materially in the knower, there would be no reason why things which have a material existence outside the soul should be devoid of knowledge; why, for instance, if by fire the soul knows fire, that fire also which is outside the soul should not have knowledge of fire.

We must conclude, therefore, that material things known must needs exist in the knower, not materially, but immaterially. The reason of this is, because the act of knowledge extends to things outside the knower: for we know things even that are external to us. Now by matter the form of a thing is determined to some one thing. Wherefore it is clear that knowledge is in inverse ratio of materiality. And consequently things that are not receptive of forms save materially, have no power of knowledge whatever—such as plants, as the Philosopher says (*De Anima* ii, 12). But the more immaterially a thing receives the form of the thing known, the more perfect is its knowledge. Therefore the intellect which abstracts the species not only from matter, but also from the individuating conditions of matter, has more perfect knowledge than the senses, which receive the form of the thing known, without matter indeed, but subject to material conditions. Moreover, among the senses, sight has the most perfect knowledge, because it is the least material, as we have remarked above (q. 78, a. 3): while among intellects the more perfect is the more immaterial.

It is therefore clear from the foregoing, that if there be an intellect which knows all things by its essence, then its essence must needs have all things in itself immaterially; thus the early philosophers held that the essence of the soul, that it may know all things, must be actually composed of the principles of all material things. Now this is proper to God, that His Essence comprise all things immaterially as effects pre-exist virtually in their cause. God alone, therefore, understands all things through His Essence: but neither the human soul nor the angels can do so.

Reply to Objection 1. Augustine in that passage is speaking of an imaginary vision, which takes place through the image of bodies. To the formation of such images the soul gives part of its substance, just as a subject is given in order to be informed by some form. In this way the soul makes such images from itself; not that the soul or some part of the soul be turned into this or that image; but just as we say that a body is made into something colored because of its being informed

with color. That this is the sense, is clear from what follows. For he says that the soul “keeps something”—namely, not informed with such image—“which is able freely to judge of the species of these images”: and that this is the “mind” or “intellect.” And he says that the part which is informed with these images—namely, the imagination—is “common to us and beasts.”

Reply to Objection 2. Aristotle did not hold that the soul is actually composed of all things, as did the earlier philosophers; he said that the soul is all things, “after a fashion,” forasmuch as it is in potentiality to all—through the senses, to all things sensible—through

the intellect, to all things intelligible.

Reply to Objection 3. Every creature has a finite and determinate essence. Wherefore although the essence of the higher creature has a certain likeness to the lower creature, forasmuch as they have something in common generically, yet it has not a complete likeness thereof, because it is determined to a certain species other than the species of the lower creature. But the Divine Essence is a perfect likeness of all, whatsoever may be found to exist in things created, being the universal principle of all.

Objection 1. It would seem that the soul understands all things through innate species. For Gregory says, in a homily for the Ascension (xxix in Ev.), that “man has understanding in common with the angels.” But angels understand all things through innate species: wherefore in the book *De Causis* it is said that “every intelligence is full of forms.” Therefore the soul also has innate species of things, by means of which it understands corporeal things.

Objection 2. Further, the intellectual soul is more excellent than corporeal primary matter. But primary matter was created by God under the forms to which it has potentiality. Therefore much more is the intellectual soul created by God under intelligible species. And so the soul understands corporeal things through innate species.

Objection 3. Further, no one can answer the truth except concerning what he knows. But even a person untaught and devoid of acquired knowledge, answers the truth to every question if put to him in orderly fashion, as we find related in the *Meno* (xv seqq.) of Plato, concerning a certain individual. Therefore we have some knowledge of things even before we acquire knowledge; which would not be the case unless we had innate species. Therefore the soul understands corporeal things through innate species.

On the contrary, The Philosopher, speaking of the intellect, says (*De Anima* iii, 4) that it is like “a tablet on which nothing is written.”

I answer that, Since form is the principle of action, a thing must be related to the form which is the principle of an action, as it is to that action: for instance, if upward motion is from lightness, then that which only potentially moves upwards must needs be only potentially light, but that which actually moves upwards must needs be actually light. Now we observe that man sometimes is only a potential knower, both as to sense and as to intellect. And he is reduced from such potentiality to act—through the action of sensible objects on his senses, to the act of sensation—by instruction or discovery, to the act of understanding. Wherefore we must say that the cognitive soul is in potentiality both to the images which are the principles of sensing, and to those which are the principles of understanding. For this reason Aristotle (*De Anima* iii, 4) held that the intellect by which the soul understands has no innate species, but is at first in potentiality to all such species.

But since that which has a form actually, is sometimes unable to act according to that form on account of some hindrance, as a light thing may be hindered from moving upwards; for this reason did Plato hold that naturally man’s intellect is filled with all intelligible species, but that, by being united to the body, it is

hindered from the realization of its act. But this seems to be unreasonable. First, because, if the soul has a natural knowledge of all things, it seems impossible for the soul so far to forget the existence of such knowledge as not to know itself to be possessed thereof: for no man forgets what he knows naturally; that, for instance, the whole is larger than the part, and such like. And especially unreasonable does this seem if we suppose that it is natural to the soul to be united to the body, as we have established above (q. 76, a. 1): for it is unreasonable that the natural operation of a thing be totally hindered by that which belongs to it naturally. Secondly, the falseness of this opinion is clearly proved from the fact that if a sense be wanting, the knowledge of what is apprehended through that sense is wanting also: for instance, a man who is born blind can have no knowledge of colors. This would not be the case if the soul had innate images of all intelligible things. We must therefore conclude that the soul does not know corporeal things through innate species.

Reply to Objection 1. Man indeed has intelligence in common with the angels, but not in the same degree of perfection: just as the lower grades of bodies, which merely exist, according to Gregory (*Homily on Ascension*, xxix In Ev.), have not the same degree of perfection as the higher bodies. For the matter of the lower bodies is not totally completed by its form, but is in potentiality to forms which it has not: whereas the matter of heavenly bodies is totally completed by its form, so that it is not in potentiality to any other form, as we have said above (q. 66, a. 2). In the same way the angelic intellect is perfected by intelligible species, in accordance with its nature; whereas the human intellect is in potentiality to such species.

Reply to Objection 2. Primary matter has substantial being through its form, consequently it had need to be created under some form: else it would not be in act. But when once it exists under one form it is in potentiality to others. On the other hand, the intellect does not receive substantial being through the intelligible species; and therefore there is no comparison.

Reply to Objection 3. If questions be put in an orderly fashion they proceed from universal self-evident principles to what is particular. Now by such a process knowledge is produced in the mind of the learner. Wherefore when he answers the truth to a subsequent question, this is not because he had knowledge previously, but because he thus learns for the first time. For it matters not whether the teacher proceed from universal principles to conclusions by questioning or by asserting; for in either case the mind of the listener is assured of what follows by that which preceded.

Objection 1. It would seem that the intelligible species are derived by the soul from some separate forms. For whatever is such by participation is caused by what is such essentially; for instance, that which is on fire is reduced to fire as the cause thereof. But the intellectual soul forasmuch as it is actually understanding, participates the thing understood: for, in a way, the intellect in act is the thing understood in act. Therefore what in itself and in its essence is understood in act, is the cause that the intellectual soul actually understands. Now that which in its essence is actually understood is a form existing without matter. Therefore the intelligible species, by which the soul understands, are caused by some separate forms.

Objection 2. Further, the intelligible is to the intellect, as the sensible is to the sense. But the sensible species which are in the senses, and by which we sense, are caused by the sensible object which exists actually outside the soul. Therefore the intelligible species, by which our intellect understands, are caused by some things actually intelligible, existing outside the soul. But these can be nothing else than forms separate from matter. Therefore the intelligible forms of our intellect are derived from some separate substances.

Objection 3. Further, whatever is in potentiality is reduced to act by something actual. If, therefore, our intellect, previously in potentiality, afterwards actually understands, this must needs be caused by some intellect which is always in act. But this is a separate intellect. Therefore the intelligible species, by which we actually understand, are caused by some separate substances.

On the contrary, If this were true we should not need the senses in order to understand. And this is proved to be false especially from the fact that if a man be wanting in a sense, he cannot have any knowledge of the sensibles corresponding to that sense.

I answer that, Some have held that the intelligible species of our intellect are derived from certain separate forms or substances. And this in two ways. For Plato, as we have said (a. 1), held that the forms of sensible things subsist by themselves without matter; for instance, the form of a man which he called “per se” man, and the form or idea of a horse which is called “per se” horse, and so forth. He said therefore that these forms are participated both by our soul and by corporeal matter; by our soul, to the effect of knowledge thereof, and by corporeal matter to the effect of existence: so that, just as corporeal matter by participating the idea of a stone, becomes an individuating stone, so our intellect, by participating the idea of a stone, is made to understand a stone. Now participation of an idea takes place by some image of the idea in the participator, just as a model is participated by a copy. So just as he held that the sensible forms, which are in corporeal matter, are derived from the ideas as certain images thereof: so

he held that the intelligible species of our intellect are images of the ideas, derived therefrom. And for this reason, as we have said above (a. 1), he referred sciences and definitions to those ideas.

But since it is contrary to the nature of sensible things that their forms should subsist without matter, as Aristotle proves in many ways (Metaph. vi), Avicenna (De Anima v) setting this opinion aside, held that the intelligible species of all sensible things, instead of subsisting in themselves without matter, pre-exist immaterially in the separate intellects: from the first of which, said he, such species are derived by a second, and so on to the last separate intellect which he called the “active intelligence,” from which, according to him, intelligible species flow into our souls, and sensible species into corporeal matter. And so Avicenna agrees with Plato in this, that the intelligible species of our intellect are derived from certain separate forms; but these Plato held to subsist of themselves, while Avicenna placed them in the “active intelligence.” They differ, too, in this respect, that Avicenna held that the intelligible species do not remain in our intellect after it has ceased actually to understand, and that it needs to turn (to the active intellect) in order to receive them anew. Consequently he does not hold that the soul has innate knowledge, as Plato, who held that the participated ideas remain immovably in the soul.

But in this opinion no sufficient reason can be assigned for the soul being united to the body. For it cannot be said that the intellectual soul is united to the body for the sake of the body: for neither is form for the sake of matter, nor is the mover for the sake of the moved, but rather the reverse. Especially does the body seem necessary to the intellectual soul, for the latter’s proper operation which is to understand: since as to its being the soul does not depend on the body. But if the soul by its very nature had an inborn aptitude for receiving intelligible species through the influence of only certain separate principles, and were not to receive them from the senses, it would not need the body in order to understand: wherefore to no purpose would it be united to the body.

But if it be said that our soul needs the senses in order to understand, through being in some way awakened by them to the consideration of those things, the intelligible species of which it receives from the separate principles: even this seems an insufficient explanation. For this awakening does not seem necessary to the soul, except in as far as it is overcome by sluggishness, as the Platonists expressed it, and by forgetfulness, through its union with the body: and thus the senses would be of no use to the intellectual soul except for the purpose of removing the obstacle which the soul encounters through its union with the body. Consequently the reason of the union of the soul with the body still remains to be sought.

And if it be said with Avicenna, that the senses are necessary to the soul, because by them it is aroused to turn to the “active intelligence” from which it receives the species: neither is this a sufficient explanation. Because if it is natural for the soul to understand through species derived from the “active intelligence,” it follows that at times the soul of an individual wanting in one of the senses can turn to the active intelligence, either from the inclination of its very nature, or through being roused by another sense, to the effect of receiving the intelligible species of which the corresponding sensible species are wanting. And thus a man born blind could have knowledge of colors; which is clearly untrue. We must therefore conclude that the intelligible species, by which our soul understands, are not derived from separate forms.

Reply to Objection 1. The intelligible species

which are participated by our intellect are reduced, as to their first cause, to a first principle which is by its essence intelligible—namely, God. But they proceed from that principle by means of the sensible forms and material things, from which we gather knowledge, as Dionysius says (Div. Nom. vii).

Reply to Objection 2. Material things, as to the being which they have outside the soul, may be actually sensible, but not actually intelligible. Wherefore there is no comparison between sense and intellect.

Reply to Objection 3. Our passive intellect is reduced from potentiality to act by some being in act, that is, by the active intellect, which is a power of the soul, as we have said (q. 79, a. 4); and not by a separate intelligence, as proximate cause, although perchance as remote cause.

Objection 1. It would seem that the intellectual soul does not know material things in the eternal types. For that in which anything is known must itself be known more and previously. But the intellectual soul of man, in the present state of life, does not know the eternal types: for it does not know God in Whom the eternal types exist, but is “united to God as to the unknown,” as Dionysius says (*Myst. Theolog.* i). Therefore the soul does not know all in the eternal types.

Objection 2. Further, it is written (*Rom.* 1:20) that “the invisible things of God are clearly seen... by the things that are made.” But among the invisible things of God are the eternal types. Therefore the eternal types are known through creatures and not the converse.

Objection 3. Further, the eternal types are nothing else but ideas, for Augustine says (*QQ.* 83, qu. 46) that “ideas are permanent types existing in the Divine mind.” If therefore we say that the intellectual soul knows all things in the eternal types, we come back to the opinion of Plato who said that all knowledge is derived from them.

On the contrary, Augustine says (*Confess.* xii, 25): “If we both see that what you say is true, and if we both see that what I say is true, where do we see this, I pray? Neither do I see it in you, nor do you see it in me: but we both see it in the unchangeable truth which is above our minds.” Now the unchangeable truth is contained in the eternal types. Therefore the intellectual soul knows all true things in the eternal types.

I answer that, As Augustine says (*De Doctr. Christ.* ii, 11): “If those who are called philosophers said by chance anything that was true and consistent with our faith, we must claim it from them as from unjust possessors. For some of the doctrines of the heathens are spurious imitations or superstitious inventions, which we must be careful to avoid when we renounce the society of the heathens.” Consequently whenever Augustine, who was imbued with the doctrines of the Platonists, found in their teaching anything consistent with faith, he adopted it: and those thing which he found contrary to faith he amended. Now Plato held, as we have said above (a. 4), that the forms of things subsist of themselves apart from matter; and these he called ideas, by participation of which he said that our intellect knows all things: so that just as corporeal matter by participating the idea of a stone becomes a stone, so our intellect, by participating the same idea, has knowledge of a stone. But since it seems contrary to faith that forms of things themselves, outside the things themselves and apart from matter, as the Platonists held, asserting that “per se” life or “per se” wisdom are creative substances,

as Dionysius relates (*Div. Nom.* xi); therefore Augustine (*QQ.* 83, qu. 46), for the ideas defended by Plato, substituted the types of all creatures existing in the Divine mind, according to which types all things are made in themselves, and are known to the human soul.

When, therefore, the question is asked: Does the human soul know all things in the eternal types? we must reply that one thing is said to be known in another in two ways. First, as in an object itself known; as one may see in a mirror the images of things reflected therein. In this way the soul, in the present state of life, cannot see all things in the eternal types; but the blessed who see God, and all things in Him, thus know all things in the eternal types. Secondly, on thing is said to be known in another as in a principle of knowledge: thus we might say that we see in the sun what we see by the sun. And thus we must needs say that the human soul knows all things in the eternal types, since by participation of these types we know all things. For the intellectual light itself which is in us, is nothing else than a participated likeness of the uncreated light, in which are contained the eternal types. Whence it is written (*Ps.* 4:6,7), “Many say: Who showeth us good things?” which question the Psalmist answers, “The light of Thy countenance, O Lord, is signed upon us,” as though he were to say: By the seal of the Divine light in us, all things are made known to us.

But since besides the intellectual light which is in us, intelligible species, which are derived from things, are required in order for us to have knowledge of material things; therefore this same knowledge is not due merely to a participation of the eternal types, as the Platonists held, maintaining that the mere participation of ideas sufficed for knowledge. Wherefore Augustine says (*De Trin.* iv, 16): “Although the philosophers prove by convincing arguments that all things occur in time according to the eternal types, were they able to see in the eternal types, or to find out from them how many kinds of animals there are and the origin of each? Did they not seek for this information from the story of times and places?”

But that Augustine did not understand all things to be known in their “eternal types” or in the “unchangeable truth,” as though the eternal types themselves were seen, is clear from what he says (*QQ.* 83, qu. 46)—viz. that “not each and every rational soul can be said to be worthy of that vision,” namely, of the eternal types, “but only those that are holy and pure,” such as the souls of the blessed.

From what has been said the objections are easily solved.

Objection 1. It would seem that intellectual knowledge is not derived from sensible things. For Augustine says (QQ. 83, qu. 9) that “we cannot expect to learn the fulness of truth from the senses of the body.” This he proves in two ways. First, because “whatever the bodily senses reach, is continually being changed; and what is never the same cannot be perceived.” Secondly, because, “whatever we perceive by the body, even when not present to the senses, may be present to the imagination, as when we are asleep or angry: yet we cannot discern by the senses, whether what we perceive be the sensible object or the deceptive image thereof. Now nothing can be perceived which cannot be distinguished from its counterfeit.” And so he concludes that we cannot expect to learn the truth from the senses. But intellectual knowledge apprehends the truth. Therefore intellectual knowledge cannot be conveyed by the senses.

Objection 2. Further, Augustine says (Gen. ad lit. xii, 16): “We must not think that the body can make any impression on the spirit, as though the spirit were to supply the place of matter in regard to the body’s action; for that which acts is in every way more excellent than that which it acts on.” Whence he concludes that “the body does not cause its image in the spirit, but the spirit causes it in itself.” Therefore intellectual knowledge is not derived from sensible things.

Objection 3. Further, an effect does not surpass the power of its cause. But intellectual knowledge extends beyond sensible things: for we understand some things which cannot be perceived by the senses. Therefore intellectual knowledge is not derived from sensible things.

On the contrary, The Philosopher says (Metaph. i, 1; Poster. ii, 15) that the principle of knowledge is in the senses.

I answer that, On this point the philosophers held three opinions. For Democritus held that “all knowledge is caused by images issuing from the bodies we think of and entering into our souls,” as Augustine says in his letter to Dioscorus (cxviii, 4). And Aristotle says (De Somn. et Vigil.) that Democritus held that knowledge is caused by a “discharge of images.” And the reason for this opinion was that both Democritus and the other early philosophers did not distinguish between intellect and sense, as Aristotle relates (De Anima iii, 3). Consequently, since the sense is affected by the sensible, they thought that all our knowledge is affected by this mere impression brought about by sensible things. Which impression Democritus held to be caused by a discharge of images.

Plato, on the other hand, held that the intellect is distinct from the senses: and that it is an immaterial power not making use of a corporeal organ for its action. And since the incorporeal cannot be affected by the corporeal, he held that intellectual knowledge is not brought about by sensible things affecting the intellect, but by separate intelligible forms being participated by the in-

tellekt, as we have said above (Aa. 4, 5). Moreover he held that sense is a power operating of itself. Consequently neither is sense, since it is a spiritual power, affected by the sensible: but the sensible organs are affected by the sensible, the result being that the soul is in a way roused to form within itself the species of the sensible. Augustine seems to touch on this opinion (Gen. ad lit. xii, 24) where he says that the “body feels not, but the soul through the body, which it makes use of as a kind of messenger, for reproducing within itself what is announced from without.” Thus according to Plato, neither does intellectual knowledge proceed from sensible knowledge, nor sensible knowledge exclusively from sensible things; but these rouse the sensible soul to the sentient act, while the senses rouse the intellect to the act of understanding.

Aristotle chose a middle course. For with Plato he agreed that intellect and sense are different. But he held that the sense has not its proper operation without the cooperation of the body; so that to feel is not an act of the soul alone, but of the “composite.” And he held the same in regard to all the operations of the sensitive part. Since, therefore, it is not unreasonable that the sensible objects which are outside the soul should produce some effect in the “composite,” Aristotle agreed with Democritus in this, that the operations of the sensitive part are caused by the impression of the sensible on the sense: not by a discharge, as Democritus said, but by some kind of operation. For Democritus maintained that every operation is by way of a discharge of atoms, as we gather from De Gener. i, 8. But Aristotle held that the intellect has an operation which is independent of the body’s cooperation. Now nothing corporeal can make an impression on the incorporeal. And therefore in order to cause the intellectual operation according to Aristotle, the impression caused by the sensible does not suffice, but something more noble is required, for “the agent is more noble than the patient,” as he says (De Gener. i, 5). Not, indeed, in the sense that the intellectual operation is effected in us by the mere intellectual operation is effected in us by the mere impression of some superior beings, as Plato held; but that the higher and more noble agent which he calls the active intellect, of which we have spoken above (q. 79, Aa. 3, 4) causes the phantasms received from the senses to be actually intelligible, by a process of abstraction.

According to this opinion, then, on the part of the phantasms, intellectual knowledge is caused by the senses. But since the phantasms cannot of themselves affect the passive intellect, and require to be made actually intelligible by the active intellect, it cannot be said that sensible knowledge is the total and perfect cause of intellectual knowledge, but rather that it is in a way the material cause.

Reply to Objection 1. Those words of Augustine mean that we must not expect the entire truth from the

senses. For the light of the active intellect is needed, through which we achieve the unchangeable truth of changeable things, and discern things themselves from their likeness.

Reply to Objection 2. In this passage Augustine speaks not of intellectual but of imaginary knowledge. And since, according to the opinion of Plato, the imagination has an operation which belongs to the soul only, Augustine, in order to show that corporeal images are impressed on the imagination, not by bodies but by the soul, uses the same argument as Aristotle does in proving that the active intellect must be separate, namely, because “the agent is more noble than the patient.” And without doubt, according to the above opinion, in the imagination there must needs be not only a passive but also an active power. But if we hold, according to the opinion of Aristotle, that the action of the imagination,

is an action of the “composite,” there is no difficulty; because the sensible body is more noble than the organ of the animal, in so far as it is compared to it as a being in act to a being in potentiality; even as the object actually colored is compared to the pupil which is potentially colored. It may, however, be said, although the first impression of the imagination is through the agency of the sensible, since “fancy is movement produced in accordance with sensation” (De Anima iii, 3), that nevertheless there is in man an operation which by synthesis and analysis forms images of various things, even of things not perceived by the senses. And Augustine’s words may be taken in this sense.

Reply to Objection 3. Sensitive knowledge is not the entire cause of intellectual knowledge. And therefore it is not strange that intellectual knowledge should extend further than sensitive knowledge.

Objection 1. It would seem that the intellect can actually understand through the intelligible species of which it is possessed, without turning to the phantasms. For the intellect is made actual by the intelligible species by which it is informed. But if the intellect is in act, it understands. Therefore the intelligible species suffices for the intellect to understand actually, without turning to the phantasms.

Objection 2. Further, the imagination is more dependent on the senses than the intellect on the imagination. But the imagination can actually imagine in the absence of the sensible. Therefore much more can the intellect understand without turning to the phantasms.

Objection 3. There are no phantasms of incorporeal things: for the imagination does not transcend time and space. If, therefore, our intellect cannot understand anything actually without turning to the phantasms, it follows that it cannot understand anything incorporeal. Which is clearly false: for we understand truth, and God, and the angels.

On the contrary, The Philosopher says (*De Anima* iii, 7) that “the soul understands nothing without a phantasm.”

I answer that, In the present state of life in which the soul is united to a passible body, it is impossible for our intellect to understand anything actually, except by turning to the phantasms. First of all because the intellect, being a power that does not make use of a corporeal organ, would in no way be hindered in its act through the lesion of a corporeal organ, if for its act there were not required the act of some power that does make use of a corporeal organ. Now sense, imagination and the other powers belonging to the sensitive part, make use of a corporeal organ. Wherefore it is clear that for the intellect to understand actually, not only when it acquires fresh knowledge, but also when it applies knowledge already acquired, there is need for the act of the imagination and of the other powers. For when the act of the imagination is hindered by a lesion of the corporeal organ, for instance in a case of frenzy; or when the act of the memory is hindered, as in the case of lethargy, we see that a man is hindered from actually understanding things of which he had a previous knowledge. Secondly, anyone can experience this of himself, that when he tries to understand something, he forms certain phantasms to serve him by way of examples, in which as it were he examines what he is desirous of understanding. For this reason it is that when we wish to help someone to understand something, we lay examples before him, from which he forms phantasms for

the purpose of understanding.

Now the reason of this is that the power of knowledge is proportioned to the thing known. Wherefore the proper object of the angelic intellect, which is entirely separate from a body, is an intelligible substance separate from a body. Whereas the proper object of the human intellect, which is united to a body, is a quiddity or nature existing in corporeal matter; and through such natures of visible things it rises to a certain knowledge of things invisible. Now it belongs to such a nature to exist in an individual, and this cannot be apart from corporeal matter: for instance, it belongs to the nature of a stone to be in an individual stone, and to the nature of a horse to be in an individual horse, and so forth. Wherefore the nature of a stone or any material thing cannot be known completely and truly, except in as much as it is known as existing in the individual. Now we apprehend the individual through the senses and the imagination. And, therefore, for the intellect to understand actually its proper object, it must of necessity turn to the phantasms in order to perceive the universal nature existing in the individual. But if the proper object of our intellect were a separate form; or if, as the Platonists say, the natures of sensible things subsisted apart from the individual; there would be no need for the intellect to turn to the phantasms whenever it understands.

Reply to Objection 1. The species preserved in the passive intellect exist there habitually when it does not understand them actually, as we have said above (q. 79, a. 6). Wherefore for us to understand actually, the fact that the species are preserved does not suffice; we need further to make use of them in a manner befitting the things of which they are the species, which things are natures existing in individuals.

Reply to Objection 2. Even the phantasm is the likeness of an individual thing; wherefore the imagination does not need any further likeness of the individual, whereas the intellect does.

Reply to Objection 3. Incorporeal things, of which there are no phantasms, are known to us by comparison with sensible bodies of which there are phantasms. Thus we understand truth by considering a thing of which we possess the truth; and God, as Dionysius says (*Div. Nom.* i), we know as cause, by way of excess and by way of remotion. Other incorporeal substances we know, in the present state of life, only by way of remotion or by some comparison to corporeal things. And, therefore, when we understand something about these things, we need to turn to phantasms of bodies, although there are no phantasms of the things themselves.

Objection 1. It would seem that the judgment of the intellect is not hindered by suspension of the sensitive powers. For the superior does not depend on the inferior. But the judgment of the intellect is higher than the senses. Therefore the judgment of the intellect is not hindered through suspension of the senses.

Objection 2. Further, to syllogize is an act of the intellect. But during sleep the senses are suspended, as is said in *De Somn. et Vigil.* i and yet it sometimes happens to us to syllogize while asleep. Therefore the judgment of the intellect is not hindered through suspension of the senses.

On the contrary, What a man does while asleep, against the moral law, is not imputed to him as a sin; as Augustine says (*Gen. ad lit.* xii, 15). But this would not be the case if man, while asleep, had free use of his reason and intellect. Therefore the judgment of the intellect is hindered by suspension of the senses.

I answer that, As we have said above (a. 7), our intellect's proper and proportionate object is the nature of a sensible thing. Now a perfect judgment concerning anything cannot be formed, unless all that pertains to that thing's nature be known; especially if that be ignored which is the term and end of judgment. Now the Philosopher says (*De Coel.* iii), that "as the end of a practical science is action, so the end of natural science is that which is perceived principally through the senses"; for the smith does not seek knowledge of a knife except for the purpose of action, in order that he may produce a certain individual knife; and in like manner the natural philosopher does not seek to know the nature of a stone and of a horse, save for the purpose of knowing the essential properties of those things which he perceives with his senses. Now it is clear that a smith cannot judge perfectly of a knife unless he knows the action of the knife: and in like manner the natural philosopher cannot judge perfectly of natural things, unless he knows sensible things. But in the present state of life whatever we understand, we know by compari-

son to natural sensible things. Consequently it is not possible for our intellect to form a perfect judgment, while the senses are suspended, through which sensible things are known to us.

Reply to Objection 1. Although the intellect is superior to the senses, nevertheless in a manner it receives from the senses, and its first and principal objects are founded in sensible things. And therefore suspension of the senses necessarily involves a hindrance to the judgment of the intellect.

Reply to Objection 2. The senses are suspended in the sleeper through certain evaporations and the escape of certain exhalations, as we read in *De Somn. et Vigil.* iii. And, therefore, according to the amount of such evaporation, the senses are more or less suspended. For when the amount is considerable, not only are the senses suspended, but also the imagination, so that there are no phantasms; thus does it happen, especially when a man falls asleep after eating and drinking copiously. If, however, the evaporation be somewhat less, phantasms appear, but distorted and without sequence; thus it happens in a case of fever. And if the evaporation be still more attenuated, the phantasms will have a certain sequence: thus especially does it happen towards the end of sleep in sober men and those who are gifted with a strong imagination. If the evaporation be very slight, not only does the imagination retain its freedom, but also the common sense is partly freed; so that sometimes while asleep a man may judge that what he sees is a dream, discerning, as it were, between things, and their images. Nevertheless, the common sense remains partly suspended; and therefore, although it discriminates some images from the reality, yet is it always deceived in some particular. Therefore, while man is asleep, according as sense and imagination are free, so is the judgment of his intellect unfettered, though not entirely. Consequently, if a man syllogizes while asleep, when he wakes up he invariably recognizes a flaw in some respect.

FIRST PART, QUESTION 85

Of the Mode and Order of Understanding (In Eight Articles)

We come now to consider the mode and order of understanding. Under this head there are eight points of inquiry:

- (1) Whether our intellect understands by abstracting the species from the phantasms?
- (2) Whether the intelligible species abstracted from the phantasms are what our intellect understands, or that whereby it understands?
- (3) Whether our intellect naturally first understands the more universal?
- (4) Whether our intellect can know many things at the same time?
- (5) Whether our intellect understands by the process of composition and division?
- (6) Whether the intellect can err?
- (7) Whether one intellect can understand better than another?
- (8) Whether our intellect understands the indivisible before the divisible?

Whether our intellect understands corporeal and material things by abstraction from phantasms?

Ia q. 85 a. 1

Objection 1. It would seem that our intellect does not understand corporeal and material things by abstraction from the phantasms. For the intellect is false if it understands an object otherwise than as it really is. Now the forms of material things do not exist as abstracted from the particular things represented by the phantasms. Therefore, if we understand material things by abstraction of the species from the phantasm, there will be error in the intellect.

Objection 2. Further, material things are those natural things which include matter in their definition. But nothing can be understood apart from that which enters into its definition. Therefore material things cannot be understood apart from matter. Now matter is the principle of individualization. Therefore material things cannot be understood by abstraction of the universal from the particular, which is the process whereby the intelligible species is abstracted from the phantasm.

Objection 3. Further, the Philosopher says (De Anima iii, 7) that the phantasm is to the intellectual soul what color is to the sight. But seeing is not caused by abstraction of species from color, but by color impressing itself on the sight. Therefore neither does the act of understanding take place by abstraction of something from the phantasm, but by the phantasm impressing itself on the intellect.

Objection 4. Further, the Philosopher says (De Anima iii, 5) there are two things in the intellectual soul—the passive intellect and the active intellect. But it does not belong to the passive intellect to abstract the intelligible species from the phantasm, but to receive them when abstracted. Neither does it seem to be the function of the active intellect, which is related to the phantasm, as light is to color; since light does not abstract anything from color, but rather streams on to it. Therefore in no way do we understand by abstraction from phantasms.

Objection 5. Further, the Philosopher (De Anima

iii, 7) says that “the intellect understands the species in the phantasm”; and not, therefore, by abstraction.

On the contrary, The Philosopher says (De Anima iii, 4) that “things are intelligible in proportion as they are separate from matter.” Therefore material things must needs be understood according as they are abstracted from matter and from material images, namely, phantasms.

I answer that, As stated above (q. 84, a. 7), the object of knowledge is proportionate to the power of knowledge. Now there are three grades of the cognitive powers. For one cognitive power, namely, the sense, is the act of a corporeal organ. And therefore the object of every sensitive power is a form as existing in corporeal matter. And since such matter is the principle of individuality, therefore every power of the sensitive part can only have knowledge of the individual. There is another grade of cognitive power which is neither the act of a corporeal organ, nor in any way connected with corporeal matter; such is the angelic intellect, the object of whose cognitive power is therefore a form existing apart from matter: for though angels know material things, yet they do not know them save in something immaterial, namely, either in themselves or in God. But the human intellect holds a middle place: for it is not the act of an organ; yet it is a power of the soul which is the form the body, as is clear from what we have said above (q. 76, a. 1). And therefore it is proper to it to know a form existing individually in corporeal matter, but not as existing in this individual matter. But to know what is in individual matter, not as existing in such matter, is to abstract the form from individual matter which is represented by the phantasms. Therefore we must needs say that our intellect understands material things by abstracting from the phantasms; and through material things thus considered we acquire some knowledge of immaterial things, just as, on the contrary, angels

know material things through the immaterial.

But Plato, considering only the immateriality of the human intellect, and not its being in a way united to the body, held that the objects of the intellect are separate ideas; and that we understand not by abstraction, but by participating things abstract, as stated above (q. 84, a. 1).

Reply to Objection 1. Abstraction may occur in two ways: First, by way of composition and division; thus we may understand that one thing does not exist in some other, or that it is separate therefrom. Secondly, by way of simple and absolute consideration; thus we understand one thing without considering the other. Thus for the intellect to abstract one from another things which are not really abstract from one another, does, in the first mode of abstraction, imply falsehood. But, in the second mode of abstraction, for the intellect to abstract things which are not really abstract from one another, does not involve falsehood, as clearly appears in the case of the senses. For if we understood or said that color is not in a colored body, or that it is separate from it, there would be error in this opinion or assertion. But if we consider color and its properties, without reference to the apple which is colored; or if we express in word what we thus understand, there is no error in such an opinion or assertion, because an apple is not essential to color, and therefore color can be understood independently of the apple. Likewise, the things which belong to the species of a material thing, such as a stone, or a man, or a horse, can be thought of apart from the individualizing principles which do not belong to the notion of the species. This is what we mean by abstracting the universal from the particular, or the intelligible species from the phantasm; that is, by considering the nature of the species apart from its individual qualities represented by the phantasms. If, therefore, the intellect is said to be false when it understands a thing otherwise than as it is, that is so, if the word "otherwise" refers to the thing understood; for the intellect is false when it understands a thing otherwise than as it is; and so the intellect would be false if it abstracted the species of a stone from its matter in such a way as to regard the species as not existing in matter, as Plato held. But it is not so, if the word "otherwise" be taken as referring to the one who understands. For it is quite true that the mode of understanding, in one who understands, is not the same as the mode of a thing in existing: since the thing understood is immaterially in the one who understands, according to the mode of the intellect, and not materially, according to the mode of a material thing.

Reply to Objection 2. Some have thought that the species of a natural thing is a form only, and that matter is not part of the species. If that were so, matter would not enter into the definition of natural things. Therefore it must be said otherwise, that matter is twofold, common, and "signate" or individual; common, such as flesh and bone; and individual, as this flesh and these bones. The intellect therefore abstracts the species of

a natural thing from the individual sensible matter, but not from the common sensible matter; for example, it abstracts the species of man from "this flesh and these bones," which do not belong to the species as such, but to the individual (Metaph. vii, Did. vi, 10), and need not be considered in the species: whereas the species of man cannot be abstracted by the intellect form "flesh and bones."

Mathematical species, however, can be abstracted by the intellect from sensible matter, not only from individual, but also from common matter; not from common intelligible matter, but only from individual matter. For sensible matter is corporeal matter as subject to sensible qualities, such as being cold or hot, hard or soft, and the like: while intelligible matter is substance as subject to quantity. Now it is manifest that quantity is in substance before other sensible qualities are. Hence quantities, such as number, dimension, and figures, which are the terminations of quantity, can be considered apart from sensible qualities; and this is to abstract them from sensible matter; but they cannot be considered without understanding the substance which is subject to the quantity; for that would be to abstract them from common intelligible matter. Yet they can be considered apart from this or that substance; for that is to abstract them from individual intelligible matter. But some things can be abstracted even from common intelligible matter, such as "being," "unity," "power," "act," and the like; all these can exist without matter, as is plain regarding immaterial things. Because Plato failed to consider the twofold kind of abstraction, as above explained (ad 1), he held that all those things which we have stated to be abstracted by the intellect, are abstract in reality.

Reply to Objection 3. Colors, as being in individual corporeal matter, have the same mode of existence as the power of sight: therefore they can impress their own image on the eye. But phantasms, since they are images of individuals, and exist in corporeal organs, have not the same mode of existence as the human intellect, and therefore have not the power of themselves to make an impression on the passive intellect. This is done by the power of the active intellect which by turning towards the phantasm produces in the passive intellect a certain likeness which represents, as to its specific conditions only, the thing reflected in the phantasm. It is thus that the intelligible species is said to be abstracted from the phantasm; not that the identical form which previously was in the phantasm is subsequently in the passive intellect, as a body transferred from one place to another.

Reply to Objection 4. Not only does the active intellect throw light on the phantasm: it does more; by its own power it abstracts the intelligible species from the phantasm. It throws light on the phantasm, because, just as the sensitive part acquires a greater power by its conjunction with the intellectual part, so by the power of the active intellect the phantasms are made more fit for

the abstraction therefrom of intelligible intentions. Furthermore, the active intellect abstracts the intelligible species from the phantasm, forasmuch as by the power of the active intellect we are able to disregard the conditions of individuality, and to take into our consideration the specific nature, the image of which informs the passive intellect.

Reply to Objection 5. Our intellect both abstracts the intelligible species from the phantasms, inasmuch as it considers the natures of things in universal, and, nevertheless, understands these natures in the phantasms since it cannot understand even the things of which it abstracts the species, without turning to the phantasms, as we have said above (q. 84, a. 7).

Whether the intelligible species abstracted from the phantasm is related to our intellect as that which is understood?

Ia q. 85 a. 2

Objection 1. It would seem that the intelligible species abstracted from the phantasm is related to our intellect as that which is understood. For the understood in act is in the one who understands: since the understood in act is the intellect itself in act. But nothing of what is understood is in the intellect actually understanding, save the abstracted intelligible species. Therefore this species is what is actually understood.

Objection 2. Further, what is actually understood must be in something; else it would be nothing. But it is not in something outside the soul: for, since what is outside the soul is material, nothing therein can be actually understood. Therefore what is actually understood is in the intellect. Consequently it can be nothing else than the aforesaid intelligible species.

Objection 3. Further, the Philosopher says (1 Peri Herm. i) that “words are signs of the passions in the soul.” But words signify the things understood, for we express by word what we understand. Therefore these passions of the soul—viz. the intelligible species, are what is actually understood.

On the contrary, The intelligible species is to the intellect what the sensible image is to the sense. But the sensible image is not what is perceived, but rather that by which sense perceives. Therefore the intelligible species is not what is actually understood, but that by which the intellect understands.

I answer that, Some have asserted that our intellectual faculties know only the impression made on them; as, for example, that sense is cognizant only of the impression made on its own organ. According to this theory, the intellect understands only its own impression, namely, the intelligible species which it has received, so that this species is what is understood.

This is, however, manifestly false for two reasons. First, because the things we understand are the objects of science; therefore if what we understand is merely the intelligible species in the soul, it would follow that every science would not be concerned with objects outside the soul, but only with the intelligible species within the soul; thus, according to the teaching of the Platonists all science is about ideas, which they held to be actually understood*. Secondly, it is untrue, because it would lead to the opinion of the ancients who maintained that “whatever seems, is true”†, and that conse-

quently contradictories are true simultaneously. For if the faculty knows its own impression only, it can judge of that only. Now a thing seems according to the impression made on the cognitive faculty. Consequently the cognitive faculty will always judge of its own impression as such; and so every judgment will be true: for instance, if taste perceived only its own impression, when anyone with a healthy taste perceives that honey is sweet, he would judge truly; and if anyone with a corrupt taste perceives that honey is bitter, this would be equally true; for each would judge according to the impression on his taste. Thus every opinion would be equally true; in fact, every sort of apprehension.

Therefore it must be said that the intelligible species is related to the intellect as that by which it understands: which is proved thus. There is a twofold action (Metaph. ix, Did. viii, 8), one which remains in the agent; for instance, to see and to understand; and another which passes into an external object; for instance, to heat and to cut; and each of these actions proceeds in virtue of some form. And as the form from which proceeds an act tending to something external is the likeness of the object of the action, as heat in the heater is a likeness of the thing heated; so the form from which proceeds an action remaining in the agent is the likeness of the object. Hence that by which the sight sees is the likeness of the visible thing; and the likeness of the thing understood, that is, the intelligible species, is the form by which the intellect understands. But since the intellect reflects upon itself, by such reflection it understands both its own act of intelligence, and the species by which it understands. Thus the intelligible species is that which is understood secondarily; but that which is primarily understood is the object, of which the species is the likeness. This also appears from the opinion of the ancient philosophers, who said that “like is known by like.” For they said that the soul knows the earth outside itself, by the earth within itself; and so of the rest. If, therefore, we take the species of the earth instead of the earth, according to Aristotle (De Anima iii, 8), who says “that a stone is not in the soul, but only the likeness of the stone”; it follows that the soul knows external things by means of its intelligible species.

Reply to Objection 1. The thing understood is in the intellect by its own likeness; and it is in this sense

* q. 84, a. 1 † Aristotle, Metaph. iii. 5

that we say that the thing actually understood is the intellect in act, because the likeness of the thing understood is the form of the intellect, as the likeness of a sensible thing is the form of the sense in act. Hence it does not follow that the intelligible species abstracted is what is actually understood; but rather that it is the likeness thereof.

Reply to Objection 2. In these words “the thing actually understood” there is a double implication—the thing which is understood, and the fact that it is understood. In like manner the words “abstract universal” imply two things, the nature of a thing and its abstraction or universality. Therefore the nature itself to which it occurs to be understood, abstracted or considered as universal is only in individuals; but that it is understood, abstracted or considered as universal is in the intellect. We see something similar to this is in the senses. For the sight sees the color of the apple apart from its smell. If therefore it be asked where is the color which is seen apart from the smell, it is quite clear that the color which is seen is only in the apple: but that it be perceived apart from the smell, this is owing to the sight, forasmuch as the faculty of sight receives the likeness of color and not of smell. In like manner humanity understood is

only in this or that man; but that humanity be apprehended without conditions of individuality, that is, that it be abstracted and consequently considered as universal, occurs to humanity inasmuch as it is brought under the consideration of the intellect, in which there is a likeness of the specific nature, but not of the principles of individuality.

Reply to Objection 3. There are two operations in the sensitive part. One, in regard of impression only, and thus the operation of the senses takes place by the senses being impressed by the sensible. The other is formation, inasmuch as the imagination forms for itself an image of an absent thing, or even of something never seen. Both of these operations are found in the intellect. For in the first place there is the passion of the passive intellect as informed by the intelligible species; and then the passive intellect thus informed forms a definition, or a division, or a composition, expressed by a word. Wherefore the concept conveyed by a word is its definition; and a proposition conveys the intellect’s division or composition. Words do not therefore signify the intelligible species themselves; but that which the intellect forms for itself for the purpose of judging of external things.

Whether the more universal is first in our intellectual cognition?

Ia q. 85 a. 3

Objection 1. It would seem that the more universal is not first in our intellectual cognition. For what is first and more known in its own nature, is secondarily and less known in relation to ourselves. But universals come first as regards their nature, because “that is first which does not involve the existence of its correlative” (Categor. ix). Therefore the universals are secondarily known as regards our intellect.

Objection 2. Further, the composition precedes the simple in relation to us. But universals are the more simple. Therefore they are known secondarily by us.

Objection 3. Further, the Philosopher says (Phys. i, 1), that the object defined comes in our knowledge before the parts of its definition. But the more universal is part of the definition of the less universal, as “animal” is part of the definition of “man.” Therefore the universals are secondarily known by us.

Objection 4. Further, we know causes and principles by their effects. But universals are principles. Therefore universals are secondarily known by us.

On the contrary, “We must proceed from the universal to the singular and individual” (Phys. i, 1)

I answer that, In our knowledge there are two things to be considered. First, that intellectual knowledge in some degree arises from sensible knowledge: and, because sense has singular and individual things for its object, and intellect has the universal for its object, it follows that our knowledge of the former comes before our knowledge of the latter. Secondly, we must consider that our intellect proceeds from a state of po-

tentiality to a state of actuality; and every power thus proceeding from potentiality to actuality comes first to an incomplete act, which is the medium between potentiality and actuality, before accomplishing the perfect act. The perfect act of the intellect is complete knowledge, when the object is distinctly and determinately known; whereas the incomplete act is imperfect knowledge, when the object is known indistinctly, and as it were confusedly. A thing thus imperfectly known, is known partly in act and partly in potentiality, and hence the Philosopher says (Phys. i, 1), that “what is manifest and certain is known to us at first confusedly; afterwards we know it by distinguishing its principles and elements.” Now it is evident that to know an object that comprises many things, without proper knowledge of each thing contained in it, is to know that thing confusedly. In this way we can have knowledge not only of the universal whole, which contains parts potentially, but also of the integral whole; for each whole can be known confusedly, without its parts being known. But to know distinctly what is contained in the universal whole is to know the less common, as to “animal” indistinctly is to know it as “animal”; whereas to know “animal” distinctly is know it as “rational” or “irrational animal,” that is, to know a man or a lion: therefore our intellect knows “animal” before it knows man; and the same reason holds in comparing any more universal idea with the less universal.

Moreover, as sense, like the intellect, proceeds from potentiality to act, the same order of knowledge appears

in the senses. For by sense we judge of the more common before the less common, in reference both to place and time; in reference to place, when a thing is seen afar off it is seen to be a body before it is seen to be an animal; and to be an animal before it is seen to be a man, and to be a man before it seen to be Socrates or Plato; and the same is true as regards time, for a child can distinguish man from not man before he distinguishes this man from that, and therefore “children at first call men fathers, and later on distinguish each one from the others” (Phys. i, 1). The reason of this is clear: because he who knows a thing indistinctly is in a state of potentiality as regards its principle of distinction; as he who knows “genus” is in a state of potentiality as regards “difference.” Thus it is evident that indistinct knowledge is midway between potentiality and act.

We must therefore conclude that knowledge of the singular and individual is prior, as regards us, to the knowledge of the universal; as sensible knowledge is prior to intellectual knowledge. But in both sense and intellect the knowledge of the more common precedes the knowledge of the less common.

Reply to Objection 1. The universal can be considered in two ways. First, the universal nature may be considered together with the intention of universality. And since the intention of universality—viz. the relation of one and the same to many—is due to intellectual abstraction, the universal thus considered is a secondary consideration. Hence it is said (De Anima i, 1) that the “universal animal is either nothing or something secondary.” But according to Plato, who held that universals are subsistent, the universal considered thus would be prior to the particular, for the latter, according to him, are mere participations of the subsistent universals which he called ideas.

Secondly, the universal can be considered in the nature itself—for instance, animality or humanity as existing in the individual. And thus we must distinguish two orders of nature: one, by way of generation and time; and thus the imperfect and the potential come first. In this way the more common comes first in the order of nature; as appears clearly in the generation of man and animal; for “the animal is generated before man,” as the Philosopher says (De Gener. Animal ii, 3). The other order is the order of perfection or of the intention of nature: for instance, act considered absolutely is naturally prior to potentiality, and the perfect to the imperfect: thus the less common comes naturally before the more common; as man comes before animal. For the intention of nature does not stop at the generation of animal but goes on to the generation of man.

Reply to Objection 2. The more common universal may be compared to the less common, as the whole, and

as the part. As the whole, considering that in the more universal is potentially contained not only the less universal, but also other things, as in “animal” is contained not only “man” but also “horse.” As part, considering that the less common contains in its idea not only the more common, but also more; as “man” contains not only “animal” but also “rational.” Therefore “animal” in itself comes into our knowledge before “man”; but “man” comes before “animal” considered as part of the same idea.

Reply to Objection 3. A part can be known in two ways. First, absolutely considered in itself; and thus nothing prevents the parts being known before the whole, as stones are known before a house is known. Secondly as belonging to a certain whole; and thus we must needs know the whole before its parts. For we know a house vaguely before we know its different parts. So likewise principles of definition are known before the thing defined is known; otherwise the thing defined would not be known at all. But as parts of the definition they are known after. For we know man vaguely as man before we know how to distinguish all that belongs to human nature.

Reply to Objection 4. The universal, as understood with the intention of universality, is, indeed, in a way, a principle of knowledge, in so far as the intention of universality results from the mode of understanding by way of abstraction. But what is a principle of knowledge is not of necessity a principle of existence, as Plato thought: since at times we know a cause through its effect, and substance through accidents. Wherefore the universal thus considered, according to the opinion of Aristotle, is neither a principle of existence, nor a substance, as he makes clear (Metaph. vii, Did. vi, 13). But if we consider the generic or specific nature itself as existing in the singular, thus in a way it is in the nature of a formal principle in regard to the singulars: for the singular is the result of matter, while the idea of species is from the form. But the generic nature is compared to the specific nature rather after the fashion of a material principle, because the generic nature is taken from that which is material in a thing, while the idea of species is taken from that which is formal: thus the notion of animal is taken from the sensitive part, whereas the notion of man is taken from the intellectual part. Thus it is that the ultimate intention of nature is to the species and not to the individual, or the genus: because the form is the end of generation, while matter is for the sake of the form. Neither is it necessary that, as regards us, knowledge of any cause or principle should be secondary: since at times through sensible causes we become acquainted with unknown effects, and sometimes conversely.

Objection 1. It would seem that we can understand many things at the same time. For intellect is above time, whereas the succession of before and after belongs to time. Therefore the intellect does not understand different things in succession, but at the same time.

Objection 2. Further, there is nothing to prevent different forms not opposed to each other from actually being in the same subject, as, for instance, color and smell are in the apple. But intelligible species are not opposed to each other. Therefore there is nothing to prevent the same intellect being in act as regards different intelligible species, and thus it can understand many things at the same time.

Objection 3. Further, the intellect understands a whole at the same time, such as a man or a house. But a whole contains many parts. Therefore the intellect understands many things at the same time.

Objection 4. Further, we cannot know the difference between two things unless we know both at the same time (*De Anima* iii, 2), and the same is to be said of any other comparison. But our intellect knows the difference and comparison between one thing and another. Therefore it knows many things at the same time.

On the contrary, It is said (*Topic.* ii, 10) that “understanding is of one thing only, knowledge is of many.”

I answer that, The intellect can, indeed, understand many things as one, but not as many: that is to say by “one” but not by “many” intelligible species. For the mode of every action follows the form which is the principle of that action. Therefore whatever things the intellect can understand under one species, it can understand at the same time: hence it is that God sees all things at the same time, because He sees all in one, that is, in His Essence. But whatever things the intellect understands under different species, it does not understand at the same time. The reason of this is that it is im-

possible for one and the same subject to be perfected at the same time by many forms of one genus and diverse species, just as it is impossible for one and the same body at the same time to have different colors or different shapes. Now all intelligible species belong to one genus, because they are the perfections of one intellectual faculty: although the things which the species represent belong to different genera. Therefore it is impossible for one and the same intellect to be perfected at the same time by different intelligible species so as actually to understand different things.

Reply to Objection 1. The intellect is above that time, which is the measure of the movement of corporeal things. But the multitude itself of intelligible species causes a certain vicissitude of intelligible operations, according as one operation succeeds another. And this vicissitude is called time by Augustine, who says (*Gen. ad lit.* viii, 20,22), that “God moves the spiritual creature through time.”

Reply to Objection 2. Not only is it impossible for opposite forms to exist at the same time in the same subject, but neither can any forms belonging to the same genus, although they be not opposed to one another, as is clear from the examples of colors and shapes.

Reply to Objection 3. Parts can be understood in two ways. First, in a confused way, as existing in the whole, and thus they are known through the one form of the whole, and so are known together. In another way they are known distinctly: thus each is known by its species; and so they are not understood at the same time.

Reply to Objection 4. If the intellect sees the difference or comparison between one thing and another, it knows both in relation to their difference or comparison; just, as we have said above (*ad 3*), as it knows the parts in the whole.

Objection 1. It would seem that our intellect does not understand by composition and division. For composition and division are only of many; whereas the intellect cannot understand many things at the same time. Therefore it cannot understand by composition and division.

Objection 2. Further, every composition and division implies past, present, or future time. But the intellect abstracts from time, as also from other individual conditions. Therefore the intellect does not understand by composition and division.

Objection 3. Further, the intellect understands things by a process of assimilation to them. But composition and division are not in things, for nothing is in things but what is signified by the predicate and the subject, and which is one and the same, provided that the

composition be true, for “man” is truly what “animal” is. Therefore the intellect does not act by composition and division.

On the contrary, Words signify the conceptions of the intellect, as the Philosopher says (*Peri Herm.* i). But in words we find composition and division, as appears in affirmative and negative propositions. Therefore the intellect acts by composition and division.

I answer that, The human intellect must of necessity understand by composition and division. For since the intellect passes from potentiality to act, it has a likeness to things which are generated, which do not attain to perfection all at once but acquire it by degrees: so likewise the human intellect does not acquire perfect knowledge by the first act of apprehension; but it first apprehends something about its object, such as its quid-

dity, and this is its first and proper object; and then it understands the properties, accidents, and the various relations of the essence. Thus it necessarily compares one thing with another by composition or division; and from one composition and division it proceeds to another, which is the process of reasoning.

But the angelic and the Divine intellect, like all incorruptible things, have their perfection at once from the beginning. Hence the angelic and the Divine intellect have the entire knowledge of a thing at once and perfectly; and hence also in knowing the quiddity of a thing they know at once whatever we can know by composition, division, and reasoning. Therefore the human intellect knows by composition, division and reasoning. But the Divine intellect and the angelic intellect know, indeed, composition, division, and reasoning, not by the process itself, but by understanding the simple essence.

Reply to Objection 1. Composition and division of the intellect are made by differentiating and comparing. Hence the intellect knows many things by composition and division, as by knowing the difference and comparison of things.

Reply to Objection 2. Although the intellect abstracts from the phantasms, it does not understand actually without turning to the phantasms, as we have said (a. 1; q. 84, a. 7). And forasmuch as it turns to the phantasms, composition and division of the intellect involve time.

Reply to Objection 3. The likeness of a thing is received into the intellect according to the mode of the intellect, not according to the mode of the thing. Wherefore something on the part of the thing corresponds to

the composition and division of the intellect; but it does not exist in the same way in the intellect and in the thing. For the proper object of the human intellect is the quiddity of a material thing, which comes under the action of the senses and the imagination. Now in a material thing there is a twofold composition. First, there is the composition of form with matter; and to this corresponds that composition of the intellect whereby the universal whole is predicated of its part: for the genus is derived from common matter, while the difference that completes the species is derived from the form, and the particular from individual matter. The second comparison is of accident with subject: and to this real composition corresponds that composition of the intellect, whereby accident is predicated of subject, as when we say “the man is white.” Nevertheless composition of the intellect differs from composition of things; for in the latter the things are diverse, whereas composition of the intellect is a sign of the identity of the components. For the above composition of the intellect does not imply that “man” and “whiteness” are identical, but the assertion, “the man is white,” means that “the man is something having whiteness”: and the subject, which is a man, is identified with a subject having whiteness. It is the same with the composition of form and matter: for animal signifies that which has a sensitive nature; rational, that which has an intellectual nature; man, that which has both; and Socrates that which has all these things together with individual matter; and according to this kind of identity our intellect predicates the composition of one thing with another.

Whether the intellect can be false?

Ia q. 85 a. 6

Objection 1. It would seem that the intellect can be false; for the Philosopher says (Metaph. vi, Did. v, 4) that “truth and falsehood are in the mind.” But the mind and intellect are the same, as is shown above (q. 79, a. 1). Therefore falsehood may be in the mind.

Objection 2. Further, opinion and reasoning belong to the intellect. But falsehood exists in both. Therefore falsehood can be in the intellect.

Objection 3. Further, sin is in the intellectual faculty. But sin involves falsehood: for “those err that work evil” (Prov. 14:22). Therefore falsehood can be in the intellect.

On the contrary, Augustine says (QQ. 83, qu. 32), that “everyone who is deceived, does not rightly understand that wherein he is deceived.” And the Philosopher says (De Anima iii, 10), that “the intellect is always true.”

I answer that, The Philosopher (De Anima iii, 6) compares intellect with sense on this point. For sense is not deceived in its proper object, as sight in regard to color; has accidentally through some hindrance occurring to the sensible organ—for example, the taste of a

fever-stricken person judges a sweet thing to be bitter, through his tongue being vitiated by ill humors. Sense, however, may be deceived as regards common sensible objects, as size or figure; when, for example, it judges the sun to be only a foot in diameter, whereas in reality it exceeds the earth in size. Much more is sense deceived concerning accidental sensible objects, as when it judges that vinegar is honey by reason of the color being the same. The reason of this is evident; for every faculty, as such, is “per se” directed to its proper object; and things of this kind are always the same. Hence, as long as the faculty exists, its judgment concerning its own proper object does not fail. Now the proper object of the intellect is the “quiddity” of a material thing; and hence, properly speaking, the intellect is not at fault concerning this quiddity; whereas it may go astray as regards the surroundings of the thing in its essence or quiddity, in referring one thing to another, as regards composition or division, or also in the process of reasoning. Therefore, also in regard to those propositions, which are understood, the intellect cannot err, as in the case of first principles from which arises infallible truth

in the certitude of scientific conclusions.

The intellect, however, may be accidentally deceived in the quiddity of composite things, not by the defect of its organ, for the intellect is a faculty that is independent of an organ; but on the part of the composition affecting the definition, when, for instance, the definition of a thing is false in relation to something else, as the definition of a circle applied to a triangle; or when a definition is false in itself as involving the composition of things incompatible; as, for instance, to describe anything as “a rational winged animal.” Hence as regards simple objects not subject to composite definitions we cannot be deceived unless, indeed, we understand nothing

whatever about them, as is said *Metaph. ix, Did. viii, 10.*

Reply to Objection 1. The Philosopher says that falsehood is in the intellect in regard to composition and division. The same answer applies to the Second Objection concerning opinion and reasoning, and to the Third Objection, concerning the error of the sinner, who errs in the practical judgment of the appetible object. But in the absolute consideration of the quiddity of a thing, and of those things which are known thereby, the intellect is never deceived. In this sense are to be understood the authorities quoted in proof of the opposite conclusion.

Whether one person can understand one and the same thing better than another can?

Ia q. 85 a. 7

Objection 1. It would seem that one person cannot understand one and the same thing better than another can. For Augustine says (QQ. 83, qu. 32), “Whoever understands a thing otherwise than as it is, does not understand it at all. Hence it is clear that there is a perfect understanding, than which none other is more perfect: and therefore there are not infinite degrees of understanding a thing; nor can one person understand a thing better than another can.”

Objection 2. Further, the intellect is true in its act of understanding. But truth, being a certain equality between thought and thing, is not subject to more or less; for a thing cannot be said to be more or less equal. Therefore a thing cannot be more or less understood.

Objection 3. Further, the intellect is the most formal of all that is in man. But different forms cause different species. Therefore if one man understands better than another, it would seem that they do not belong to the same species.

On the contrary, Experience shows that some understand more profoundly than do others; as one who carries a conclusion to its first principles and ultimate causes understands it better than the one who reduces it only to its proximate causes.

I answer that, A thing being understood more by one than by another may be taken in two senses. First, so that the word “more” be taken as determining the act of understanding as regards the thing understood; and thus, one cannot understand the same thing more than another, because to understand it otherwise than as it is, either better or worse, would entail being deceived, and such a one would not understand it, as Augustine argues

(QQ. 83, qu. 32). In another sense the word “more” can be taken as determining the act of understanding on the part of him who understands; and so one may understand the same thing better than someone else, through having a greater power of understanding: just as a man may see a thing better with his bodily sight, whose power is greater, and whose sight is more perfect. The same applies to the intellect in two ways. First, as regards the intellect itself, which is more perfect. For it is plain that the better the disposition of a body, the better the soul allotted to it; which clearly appears in things of different species: and the reason thereof is that act and form are received into matter according to matter’s capacity: thus because some men have bodies of better disposition, their souls have a greater power of understanding, wherefore it is said (*De Anima ii, 9*), that “it is to be observed that those who have soft flesh are of apt mind.” Secondly, this occurs in regard to the lower powers of which the intellect has need in its operation: for those in whom the imaginative, cogitative, and memorative powers are of better disposition, are better disposed to understand.

The reply to the First Objection is clear from the above; likewise the reply to the Second, for the truth of the intellect consists in the intellect understanding a thing as it is.

Reply to Objection 3. The difference of form which is due only to the different disposition of matter, causes not a specific but only a numerical difference: for different individuals have different forms, diversified according to the difference of matter.

Whether the intellect understands the indivisible before the divisible?

Ia q. 85 a. 8

Objection 1. It would seem that the intellect understands the indivisible before the divisible. For the Philosopher says (*Phys. i, 1*) that “we understand and know from the knowledge of principles and elements.” But principles are indivisible, and elements are of divisible things. Therefore the indivisible is known to us

before the divisible.

Objection 2. Further, the definition of a thing contains what is known previously, for a definition “proceeds from the first and more known,” as is said *Topic. vi, 4*. But the indivisible is part of the definition of the divisible; as a point comes into the definition of a line;

for as Euclid says, “a line is length without breadth, the extremities of which are points”; also unity comes into the definition of number, for “number is multitude measured by one,” as is said *Metaph. x, Did. ix, 6*. Therefore our intellect understands the indivisible before the divisible.

Objection 3. Further, “Like is known by like.” But the indivisible is more like to the intellect than is the divisible; because “the intellect is simple” (*De Anima iii, 4*). Therefore our intellect first knows the indivisible.

On the contrary, It is said (*De Anima iii, 6*) that “the indivisible is expressed as a privation.” But privation is known secondarily. Therefore likewise is the indivisible.

I answer that, The object of our intellect in its present state is the quiddity of a material thing, which it abstracts from the phantasms, as above stated (q. 84, a. 7). And since that which is known first and of itself by our cognitive power is its proper object, we must consider its relationship to that quiddity in order to discover in what order the indivisible is known. Now the indivisible is threefold, as is said *De Anima iii, 6*. First, the continuous is indivisible, since actually it is undivided, although potentially divisible: and this indivisible is known to us before its division, which is a division into parts: because confused knowledge is prior to distinct knowledge, as we have said above (a. 3). Secondly, the indivisible is so called in relation to species, as man’s reason is something indivisible. This way, also, the indivisible is understood before its division into logical parts, as we have said above (*De Anima iii, 6*); and again before the intellect disposes and divides by affirmation and negation. The reason of this is that both these kinds of indivisible are understood by the intellect of itself, as being its proper object. The third kind of indivisible is what is altogether indivisible, as a point and unity, which cannot be divided either actually or potentially. And this indivisible is known secondarily,

through the privation of divisibility. Wherefore a point is defined by way of privation “as that which has no parts”; and in like manner the notion of “one” is that is “indivisible,” as stated in *Metaph. x, Did. ix, 1*. And the reason of this is that this indivisible has a certain opposition to a corporeal being, the quiddity of which is the primary and proper object of the intellect.

But if our intellect understood by participation of certain separate indivisible (forms), as the Platonists maintained, it would follow that a like indivisible is understood primarily; for according to the Platonists what is first is first participated by things.

Reply to Objection 1. In the acquisition of knowledge, principles and elements are not always (known) first: for sometimes from sensible effects we arrive at the knowledge of principles and intelligible causes. But in perfect knowledge, the knowledge of effects always depends on the knowledge of principles and elements: for as the Philosopher says in the same passage: “Then do we consider that we know, when we can resolve principles into their causes.”

Reply to Objection 2. A point is not included in the definition of a line in general: for it is manifest that in a line of indefinite length, and in a circular line, there is no point, save potentially. Euclid defines a finite straight line: and therefore he mentions a point in the definition, as the limit in the definition of that which is limited. Unity is the measure of number: wherefore it is included in the definition of a measured number. But it is not included in the definition of the divisible, but rather conversely.

Reply to Objection 3. The likeness through which we understand is the species of the known in the knower; therefore a thing is known first, not on account of its natural likeness to the cognitive power, but on account of the power’s aptitude for the object: otherwise sight would perceive hearing rather than color.

Objection 1. It would seem that our intellect does not understand corporeal and material things by abstraction from the phantasms. For the intellect is false if it understands an object otherwise than as it really is. Now the forms of material things do not exist as abstracted from the particular things represented by the phantasms. Therefore, if we understand material things by abstraction of the species from the phantasm, there will be error in the intellect.

Objection 2. Further, material things are those natural things which include matter in their definition. But nothing can be understood apart from that which enters into its definition. Therefore material things cannot be understood apart from matter. Now matter is the principle of individualization. Therefore material things cannot be understood by abstraction of the universal from the particular, which is the process whereby the intelligible species is abstracted from the phantasm.

Objection 3. Further, the Philosopher says (*De Anima* iii, 7) that the phantasm is to the intellectual soul what color is to the sight. But seeing is not caused by abstraction of species from color, but by color impressing itself on the sight. Therefore neither does the act of understanding take place by abstraction of something from the phantasm, but by the phantasm impressing itself on the intellect.

Objection 4. Further, the Philosopher says (*De Anima* iii, 5) there are two things in the intellectual soul—the passive intellect and the active intellect. But it does not belong to the passive intellect to abstract the intelligible species from the phantasm, but to receive them when abstracted. Neither does it seem to be the function of the active intellect, which is related to the phantasm, as light is to color; since light does not abstract anything from color, but rather streams on to it. Therefore in no way do we understand by abstraction from phantasms.

Objection 5. Further, the Philosopher (*De Anima* iii, 7) says that “the intellect understands the species in the phantasm”; and not, therefore, by abstraction.

On the contrary, The Philosopher says (*De Anima* iii, 4) that “things are intelligible in proportion as they are separate from matter.” Therefore material things must needs be understood according as they are abstracted from matter and from material images, namely, phantasms.

I answer that, As stated above (q. 84, a. 7), the object of knowledge is proportionate to the power of knowledge. Now there are three grades of the cognitive powers. For one cognitive power, namely, the sense, is the act of a corporeal organ. And therefore the object of every sensitive power is a form as existing in corporeal matter. And since such matter is the principle of individuality, therefore every power of the sensitive part can only have knowledge of the individual. There is another grade of cognitive power which is neither the

act of a corporeal organ, nor in any way connected with corporeal matter; such is the angelic intellect, the object of whose cognitive power is therefore a form existing apart from matter: for though angels know material things, yet they do not know them save in something immaterial, namely, either in themselves or in God. But the human intellect holds a middle place: for it is not the act of an organ; yet it is a power of the soul which is the form the body, as is clear from what we have said above (q. 76, a. 1). And therefore it is proper to it to know a form existing individually in corporeal matter, but not as existing in this individual matter. But to know what is in individual matter, not as existing in such matter, is to abstract the form from individual matter which is represented by the phantasms. Therefore we must needs say that our intellect understands material things by abstracting from the phantasms; and through material things thus considered we acquire some knowledge of immaterial things, just as, on the contrary, angels know material things through the immaterial.

But Plato, considering only the immateriality of the human intellect, and not its being in a way united to the body, held that the objects of the intellect are separate ideas; and that we understand not by abstraction, but by participating things abstract, as stated above (q. 84, a. 1).

Reply to Objection 1. Abstraction may occur in two ways: First, by way of composition and division; thus we may understand that one thing does not exist in some other, or that it is separate therefrom. Secondly, by way of simple and absolute consideration; thus we understand one thing without considering the other. Thus for the intellect to abstract one from another things which are not really abstract from one another, does, in the first mode of abstraction, imply falsehood. But, in the second mode of abstraction, for the intellect to abstract things which are not really abstract from one another, does not involve falsehood, as clearly appears in the case of the senses. For if we understood or said that color is not in a colored body, or that it is separate from it, there would be error in this opinion or assertion. But if we consider color and its properties, without reference to the apple which is colored; or if we express in word what we thus understand, there is no error in such an opinion or assertion, because an apple is not essential to color, and therefore color can be understood independently of the apple. Likewise, the things which belong to the species of a material thing, such as a stone, or a man, or a horse, can be thought of apart from the individualizing principles which do not belong to the notion of the species. This is what we mean by abstracting the universal from the particular, or the intelligible species from the phantasm; that is, by considering the nature of the species apart from its individual qualities represented by the phantasms. If, therefore, the intellect is

said to be false when it understands a thing otherwise than as it is, that is so, if the word “otherwise” refers to the thing understood; for the intellect is false when it understands a thing otherwise than as it is; and so the intellect would be false if it abstracted the species of a stone from its matter in such a way as to regard the species as not existing in matter, as Plato held. But it is not so, if the word “otherwise” be taken as referring to the one who understands. For it is quite true that the mode of understanding, in one who understands, is not the same as the mode of a thing in existing: since the thing understood is immaterially in the one who understands, according to the mode of the intellect, and not materially, according to the mode of a material thing.

Reply to Objection 2. Some have thought that the species of a natural thing is a form only, and that matter is not part of the species. If that were so, matter would not enter into the definition of natural things. Therefore it must be said otherwise, that matter is twofold, common, and “signate” or individual; common, such as flesh and bone; and individual, as this flesh and these bones. The intellect therefore abstracts the species of a natural thing from the individual sensible matter, but not from the common sensible matter; for example, it abstracts the species of man from “this flesh and these bones,” which do not belong to the species as such, but to the individual (Metaph. vii, Did. vi, 10), and need not be considered in the species: whereas the species of man cannot be abstracted by the intellect form “flesh and bones.”

Mathematical species, however, can be abstracted by the intellect from sensible matter, not only from individual, but also from common matter; not from common intelligible matter, but only from individual matter. For sensible matter is corporeal matter as subject to sensible qualities, such as being cold or hot, hard or soft, and the like: while intelligible matter is substance as subject to quantity. Now it is manifest that quantity is in substance before other sensible qualities are. Hence quantities, such as number, dimension, and figures, which are the terminations of quantity, can be considered apart from sensible qualities; and this is to abstract them from sensible matter; but they cannot be considered without understanding the substance which is subject to the quantity; for that would be to abstract them from common intelligible matter. Yet they can be considered apart from this or that substance; for that is

to abstract them from individual intelligible matter. But some things can be abstracted even from common intelligible matter, such as “being,” “unity,” “power,” “act,” and the like; all these can exist without matter, as is plain regarding immaterial things. Because Plato failed to consider the twofold kind of abstraction, as above explained (ad 1), he held that all those things which we have stated to be abstracted by the intellect, are abstract in reality.

Reply to Objection 3. Colors, as being in individual corporeal matter, have the same mode of existence as the power of sight: therefore they can impress their own image on the eye. But phantasms, since they are images of individuals, and exist in corporeal organs, have not the same mode of existence as the human intellect, and therefore have not the power of themselves to make an impression on the passive intellect. This is done by the power of the active intellect which by turning towards the phantasm produces in the passive intellect a certain likeness which represents, as to its specific conditions only, the thing reflected in the phantasm. It is thus that the intelligible species is said to be abstracted from the phantasm; not that the identical form which previously was in the phantasm is subsequently in the passive intellect, as a body transferred from one place to another.

Reply to Objection 4. Not only does the active intellect throw light on the phantasm: it does more; by its own power it abstracts the intelligible species from the phantasm. It throws light on the phantasm, because, just as the sensitive part acquires a greater power by its conjunction with the intellectual part, so by the power of the active intellect the phantasms are made more fit for the abstraction therefrom of intelligible intentions. Furthermore, the active intellect abstracts the intelligible species from the phantasm, forasmuch as by the power of the active intellect we are able to disregard the conditions of individuality, and to take into our consideration the specific nature, the image of which informs the passive intellect.

Reply to Objection 5. Our intellect both abstracts the intelligible species from the phantasms, inasmuch as it considers the natures of things in universal, and, nevertheless, understands these natures in the phantasms since it cannot understand even the things of which it abstracts the species, without turning to the phantasms, as we have said above (q. 84, a. 7).

Objection 1. It would seem that the intelligible species abstracted from the phantasm is related to our intellect as that which is understood. For the understood in act is in the one who understands: since the understood in act is the intellect itself in act. But nothing of what is understood is in the intellect actually understanding, save the abstracted intelligible species. Therefore this species is what is actually understood.

Objection 2. Further, what is actually understood must be in something; else it would be nothing. But it is not in something outside the soul: for, since what is outside the soul is material, nothing therein can be actually understood. Therefore what is actually understood is in the intellect. Consequently it can be nothing else than the aforesaid intelligible species.

Objection 3. Further, the Philosopher says (1 Peri Herm. i) that “words are signs of the passions in the soul.” But words signify the things understood, for we express by word what we understand. Therefore these passions of the soul—viz. the intelligible species, are what is actually understood.

On the contrary, The intelligible species is to the intellect what the sensible image is to the sense. But the sensible image is not what is perceived, but rather that by which sense perceives. Therefore the intelligible species is not what is actually understood, but that by which the intellect understands.

Answer that, Some have asserted that our intellectual faculties know only the impression made on them; as, for example, that sense is cognizant only of the impression made on its own organ. According to this theory, the intellect understands only its own impression, namely, the intelligible species which it has received, so that this species is what is understood.

This is, however, manifestly false for two reasons. First, because the things we understand are the objects of science; therefore if what we understand is merely the intelligible species in the soul, it would follow that every science would not be concerned with objects outside the soul, but only with the intelligible species within the soul; thus, according to the teaching of the Platonists all science is about ideas, which they held to be actually understood*. Secondly, it is untrue, because it would lead to the opinion of the ancients who maintained that “whatever seems, is true”†, and that consequently contradictories are true simultaneously. For if the faculty knows its own impression only, it can judge of that only. Now a thing seems according to the impression made on the cognitive faculty. Consequently the cognitive faculty will always judge of its own impression as such; and so every judgment will be true: for instance, if taste perceived only its own impression, when anyone with a healthy taste perceives that honey is sweet, he would judge truly; and if anyone with a

corrupt taste perceives that honey is bitter, this would be equally true; for each would judge according to the impression on his taste. Thus every opinion would be equally true; in fact, every sort of apprehension.

Therefore it must be said that the intelligible species is related to the intellect as that by which it understands: which is proved thus. There is a twofold action (Metaph. ix, Did. viii, 8), one which remains in the agent; for instance, to see and to understand; and another which passes into an external object; for instance, to heat and to cut; and each of these actions proceeds in virtue of some form. And as the form from which proceeds an act tending to something external is the likeness of the object of the action, as heat in the heater is a likeness of the thing heated; so the form from which proceeds an action remaining in the agent is the likeness of the object. Hence that by which the sight sees is the likeness of the visible thing; and the likeness of the thing understood, that is, the intelligible species, is the form by which the intellect understands. But since the intellect reflects upon itself, by such reflection it understands both its own act of intelligence, and the species by which it understands. Thus the intelligible species is that which is understood secondarily; but that which is primarily understood is the object, of which the species is the likeness. This also appears from the opinion of the ancient philosophers, who said that “like is known by like.” For they said that the soul knows the earth outside itself, by the earth within itself; and so of the rest. If, therefore, we take the species of the earth instead of the earth, according to Aristotle (De Anima iii, 8), who says “that a stone is not in the soul, but only the likeness of the stone”; it follows that the soul knows external things by means of its intelligible species.

Reply to Objection 1. The thing understood is in the intellect by its own likeness; and it is in this sense that we say that the thing actually understood is the intellect in act, because the likeness of the thing understood is the form of the intellect, as the likeness of a sensible thing is the form of the sense in act. Hence it does not follow that the intelligible species abstracted is what is actually understood; but rather that it is the likeness thereof.

Reply to Objection 2. In these words “the thing actually understood” there is a double implication—the thing which is understood, and the fact that it is understood. In like manner the words “abstract universal” imply two things, the nature of a thing and its abstraction or universality. Therefore the nature itself to which it occurs to be understood, abstracted or considered as universal is only in individuals; but that it is understood, abstracted or considered as universal is in the intellect. We see something similar to this is in the senses. For the sight sees the color of the apple apart from its smell.

* q. 84, a. 1 † Aristotle, Metaph. iii. 5

If therefore it be asked where is the color which is seen apart from the smell, it is quite clear that the color which is seen is only in the apple: but that it be perceived apart from the smell, this is owing to the sight, forasmuch as the faculty of sight receives the likeness of color and not of smell. In like manner humanity understood is only in this or that man; but that humanity be apprehended without conditions of individuality, that is, that it be abstracted and consequently considered as universal, occurs to humanity inasmuch as it is brought under the consideration of the intellect, in which there is a likeness of the specific nature, but not of the principles of individuality.

Reply to Objection 3. There are two operations in the sensitive part. One, in regard of impression only,

and thus the operation of the senses takes place by the senses being impressed by the sensible. The other is formation, inasmuch as the imagination forms for itself an image of an absent thing, or even of something never seen. Both of these operations are found in the intellect. For in the first place there is the passion of the passive intellect as informed by the intelligible species; and then the passive intellect thus informed forms a definition, or a division, or a composition, expressed by a word. Wherefore the concept conveyed by a word is its definition; and a proposition conveys the intellect's division or composition. Words do not therefore signify the intelligible species themselves; but that which the intellect forms for itself for the purpose of judging of external things.

Objection 1. It would seem that the more universal is not first in our intellectual cognition. For what is first and more known in its own nature, is secondarily and less known in relation to ourselves. But universals come first as regards their nature, because “that is first which does not involve the existence of its correlative” (Categor. ix). Therefore the universals are secondarily known as regards our intellect.

Objection 2. Further, the composition precedes the simple in relation to us. But universals are the more simple. Therefore they are known secondarily by us.

Objection 3. Further, the Philosopher says (Phys. i, 1), that the object defined comes in our knowledge before the parts of its definition. But the more universal is part of the definition of the less universal, as “animal” is part of the definition of “man.” Therefore the universals are secondarily known by us.

Objection 4. Further, we know causes and principles by their effects. But universals are principles. Therefore universals are secondarily known by us.

On the contrary, “We must proceed from the universal to the singular and individual” (Phys. i, 1)

I answer that, In our knowledge there are two things to be considered. First, that intellectual knowledge in some degree arises from sensible knowledge: and, because sense has singular and individual things for its object, and intellect has the universal for its object, it follows that our knowledge of the former comes before our knowledge of the latter. Secondly, we must consider that our intellect proceeds from a state of potentiality to a state of actuality; and every power thus proceeding from potentiality to actuality comes first to an incomplete act, which is the medium between potentiality and actuality, before accomplishing the perfect act. The perfect act of the intellect is complete knowledge, when the object is distinctly and determinately known; whereas the incomplete act is imperfect knowledge, when the object is known indistinctly, and as it were confusedly. A thing thus imperfectly known, is known partly in act and partly in potentiality, and hence the Philosopher says (Phys. i, 1), that “what is manifest and certain is known to us at first confusedly; afterwards we know it by distinguishing its principles and elements.” Now it is evident that to know an object that comprises many things, without proper knowledge of each thing contained in it, is to know that thing confusedly. In this way we can have knowledge not only of the universal whole, which contains parts potentially, but also of the integral whole; for each whole can be known confusedly, without its parts being known. But to know distinctly what is contained in the universal whole is to know the less common, as to “animal” indistinctly is to know it as “animal”; whereas to know “animal” distinctly is to know it as “rational” or “irrational animal,” that is, to know a man or a lion: therefore our intellect knows “animal” before it knows man; and the same

reason holds in comparing any more universal idea with the less universal.

Moreover, as sense, like the intellect, proceeds from potentiality to act, the same order of knowledge appears in the senses. For by sense we judge of the more common before the less common, in reference both to place and time; in reference to place, when a thing is seen afar off it is seen to be a body before it is seen to be an animal; and to be an animal before it is seen to be a man, and to be a man before it is seen to be Socrates or Plato; and the same is true as regards time, for a child can distinguish man from not man before he distinguishes this man from that, and therefore “children at first call men fathers, and later on distinguish each one from the others” (Phys. i, 1). The reason of this is clear: because he who knows a thing indistinctly is in a state of potentiality as regards its principle of distinction; as he who knows “genus” is in a state of potentiality as regards “difference.” Thus it is evident that indistinct knowledge is midway between potentiality and act.

We must therefore conclude that knowledge of the singular and individual is prior, as regards us, to the knowledge of the universal; as sensible knowledge is prior to intellectual knowledge. But in both sense and intellect the knowledge of the more common precedes the knowledge of the less common.

Reply to Objection 1. The universal can be considered in two ways. First, the universal nature may be considered together with the intention of universality. And since the intention of universality—viz. the relation of one and the same to many—is due to intellectual abstraction, the universal thus considered is a secondary consideration. Hence it is said (De Anima i, 1) that the “universal animal is either nothing or something secondary.” But according to Plato, who held that universals are subsistent, the universal considered thus would be prior to the particular, for the latter, according to him, are mere participations of the subsistent universals which he called ideas.

Secondly, the universal can be considered in the nature itself—for instance, animality or humanity as existing in the individual. And thus we must distinguish two orders of nature: one, by way of generation and time; and thus the imperfect and the potential come first. In this way the more common comes first in the order of nature; as appears clearly in the generation of man and animal; for “the animal is generated before man,” as the Philosopher says (De Gener. Animal ii, 3). The other order is the order of perfection or of the intention of nature: for instance, act considered absolutely is naturally prior to potentiality, and the perfect to the imperfect: thus the less common comes naturally before the more common; as man comes before animal. For the intention of nature does not stop at the generation of animal but goes on to the generation of man.

Reply to Objection 2. The more common universal

may be compared to the less common, as the whole, and as the part. As the whole, considering that in the more universal is potentially contained not only the less universal, but also other things, as in “animal” is contained not only “man” but also “horse.” As part, considering that the less common contains in its idea not only the more common, but also more; as “man” contains not only “animal” but also “rational.” Therefore “animal” in itself comes into our knowledge before “man”; but “man” comes before “animal” considered as part of the same idea.

Reply to Objection 3. A part can be known in two ways. First, absolutely considered in itself; and thus nothing prevents the parts being known before the whole, as stones are known before a house is known. Secondly as belonging to a certain whole; and thus we must needs know the whole before its parts. For we know a house vaguely before we know its different parts. So likewise principles of definition are known before the thing defined is known; otherwise the thing defined would not be known at all. But as parts of the definition they are known after. For we know man vaguely as man before we know how to distinguish all that belongs to human nature.

Reply to Objection 4. The universal, as understood with the intention of universality, is, indeed, in a way, a principle of knowledge, in so far as the intention of

universality results from the mode of understanding by way of abstraction. But what is a principle of knowledge is not of necessity a principle of existence, as Plato thought: since at times we know a cause through its effect, and substance through accidents. Wherefore the universal thus considered, according to the opinion of Aristotle, is neither a principle of existence, nor a substance, as he makes clear (*Metaph. vii, Did. vi, 13*). But if we consider the generic or specific nature itself as existing in the singular, thus in a way it is in the nature of a formal principle in regard to the singulars: for the singular is the result of matter, while the idea of species is from the form. But the generic nature is compared to the specific nature rather after the fashion of a material principle, because the generic nature is taken from that which is material in a thing, while the idea of species is taken from that which is formal: thus the notion of animal is taken from the sensitive part, whereas the notion of man is taken from the intellectual part. Thus it is that the ultimate intention of nature is to the species and not to the individual, or the genus: because the form is the end of generation, while matter is for the sake of the form. Neither is it necessary that, as regards us, knowledge of any cause or principle should be secondary: since at times through sensible causes we become acquainted with unknown effects, and sometimes conversely.

Objection 1. It would seem that we can understand many things at the same time. For intellect is above time, whereas the succession of before and after belongs to time. Therefore the intellect does not understand different things in succession, but at the same time.

Objection 2. Further, there is nothing to prevent different forms not opposed to each other from actually being in the same subject, as, for instance, color and smell are in the apple. But intelligible species are not opposed to each other. Therefore there is nothing to prevent the same intellect being in act as regards different intelligible species, and thus it can understand many things at the same time.

Objection 3. Further, the intellect understands a whole at the same time, such as a man or a house. But a whole contains many parts. Therefore the intellect understands many things at the same time.

Objection 4. Further, we cannot know the difference between two things unless we know both at the same time (*De Anima* iii, 2), and the same is to be said of any other comparison. But our intellect knows the difference and comparison between one thing and another. Therefore it knows many things at the same time.

On the contrary, It is said (*Topic.* ii, 10) that “understanding is of one thing only, knowledge is of many.”

I answer that, The intellect can, indeed, understand many things as one, but not as many: that is to say by “one” but not by “many” intelligible species. For the mode of every action follows the form which is the principle of that action. Therefore whatever things the intellect can understand under one species, it can understand at the same time: hence it is that God sees all things at the same time, because He sees all in one, that is, in His Essence. But whatever things the intellect understands under different species, it does not understand at the same time. The reason of this is that it is im-

possible for one and the same subject to be perfected at the same time by many forms of one genus and diverse species, just as it is impossible for one and the same body at the same time to have different colors or different shapes. Now all intelligible species belong to one genus, because they are the perfections of one intellectual faculty: although the things which the species represent belong to different genera. Therefore it is impossible for one and the same intellect to be perfected at the same time by different intelligible species so as actually to understand different things.

Reply to Objection 1. The intellect is above that time, which is the measure of the movement of corporeal things. But the multitude itself of intelligible species causes a certain vicissitude of intelligible operations, according as one operation succeeds another. And this vicissitude is called time by Augustine, who says (*Gen. ad lit.* viii, 20,22), that “God moves the spiritual creature through time.”

Reply to Objection 2. Not only is it impossible for opposite forms to exist at the same time in the same subject, but neither can any forms belonging to the same genus, although they be not opposed to one another, as is clear from the examples of colors and shapes.

Reply to Objection 3. Parts can be understood in two ways. First, in a confused way, as existing in the whole, and thus they are known through the one form of the whole, and so are known together. In another way they are known distinctly: thus each is known by its species; and so they are not understood at the same time.

Reply to Objection 4. If the intellect sees the difference or comparison between one thing and another, it knows both in relation to their difference or comparison; just, as we have said above (*ad 3*), as it knows the parts in the whole.

Objection 1. It would seem that our intellect does not understand by composition and division. For composition and division are only of many; whereas the intellect cannot understand many things at the same time. Therefore it cannot understand by composition and division.

Objection 2. Further, every composition and division implies past, present, or future time. But the intellect abstracts from time, as also from other individual conditions. Therefore the intellect does not understand by composition and division.

Objection 3. Further, the intellect understands things by a process of assimilation to them. But composition and division are not in things, for nothing is in things but what is signified by the predicate and the subject, and which is one and the same, provided that the composition be true, for “man” is truly what “animal” is. Therefore the intellect does not act by composition and division.

On the contrary, Words signify the conceptions of the intellect, as the Philosopher says (*Peri Herm.* i). But in words we find composition and division, as appears in affirmative and negative propositions. Therefore the intellect acts by composition and division.

I answer that, The human intellect must of necessity understand by composition and division. For since the intellect passes from potentiality to act, it has a likeness to things which are generated, which do not attain to perfection all at once but acquire it by degrees: so likewise the human intellect does not acquire perfect knowledge by the first act of apprehension; but it first apprehends something about its object, such as its quiddity, and this is its first and proper object; and then it understands the properties, accidents, and the various relations of the essence. Thus it necessarily compares one thing with another by composition or division; and from one composition and division it proceeds to another, which is the process of reasoning.

But the angelic and the Divine intellect, like all incorruptible things, have their perfection at once from the beginning. Hence the angelic and the Divine intellect have the entire knowledge of a thing at once and perfectly; and hence also in knowing the quiddity of a thing they know at once whatever we can know by composition, division, and reasoning. Therefore the human intellect knows by composition, division and reasoning. But the Divine intellect and the angelic intellect know, indeed, composition, division, and reasoning, not by the

process itself, but by understanding the simple essence.

Reply to Objection 1. Composition and division of the intellect are made by differentiating and comparing. Hence the intellect knows many things by composition and division, as by knowing the difference and comparison of things.

Reply to Objection 2. Although the intellect abstracts from the phantasms, it does not understand actually without turning to the phantasms, as we have said (a. 1; q. 84, a. 7). And forasmuch as it turns to the phantasms, composition and division of the intellect involve time.

Reply to Objection 3. The likeness of a thing is received into the intellect according to the mode of the intellect, not according to the mode of the thing. Wherefore something on the part of the thing corresponds to the composition and division of the intellect; but it does not exist in the same way in the intellect and in the thing. For the proper object of the human intellect is the quiddity of a material thing, which comes under the action of the senses and the imagination. Now in a material thing there is a twofold composition. First, there is the composition of form with matter; and to this corresponds that composition of the intellect whereby the universal whole is predicated of its part: for the genus is derived from common matter, while the difference that completes the species is derived from the form, and the particular from individual matter. The second comparison is of accident with subject: and to this real composition corresponds that composition of the intellect, whereby accident is predicated of subject, as when we say “the man is white.” Nevertheless composition of the intellect differs from composition of things; for in the latter the things are diverse, whereas composition of the intellect is a sign of the identity of the components. For the above composition of the intellect does not imply that “man” and “whiteness” are identical, but the assertion, “the man is white,” means that “the man is something having whiteness”: and the subject, which is a man, is identified with a subject having whiteness. It is the same with the composition of form and matter: for animal signifies that which has a sensitive nature; rational, that which has an intellectual nature; man, that which has both; and Socrates that which has all these things together with individual matter; and according to this kind of identity our intellect predicates the composition of one thing with another.

Objection 1. It would seem that the intellect can be false; for the Philosopher says (Metaph. vi, Did. v, 4) that “truth and falsehood are in the mind.” But the mind and intellect are the same, as is shown above (q. 79, a. 1). Therefore falsehood may be in the mind.

Objection 2. Further, opinion and reasoning belong to the intellect. But falsehood exists in both. Therefore falsehood can be in the intellect.

Objection 3. Further, sin is in the intellectual faculty. But sin involves falsehood: for “those err that work evil” (Prov. 14:22). Therefore falsehood can be in the intellect.

On the contrary, Augustine says (QQ. 83, qu. 32), that “everyone who is deceived, does not rightly understand that wherein he is deceived.” And the Philosopher says (De Anima iii, 10), that “the intellect is always true.”

I answer that, The Philosopher (De Anima iii, 6) compares intellect with sense on this point. For sense is not deceived in its proper object, as sight in regard to color; has accidentally through some hindrance occurring to the sensible organ—for example, the taste of a fever-stricken person judges a sweet thing to be bitter, through his tongue being vitiated by ill humors. Sense, however, may be deceived as regards common sensible objects, as size or figure; when, for example, it judges the sun to be only a foot in diameter, whereas in reality it exceeds the earth in size. Much more is sense deceived concerning accidental sensible objects, as when it judges that vinegar is honey by reason of the color being the same. The reason of this is evident; for every faculty, as such, is “per se” directed to its proper object; and things of this kind are always the same. Hence, as long as the faculty exists, its judgment concerning its own proper object does not fail. Now the proper ob-

ject of the intellect is the “quiddity” of a material thing; and hence, properly speaking, the intellect is not at fault concerning this quiddity; whereas it may go astray as regards the surroundings of the thing in its essence or quiddity, in referring one thing to another, as regards composition or division, or also in the process of reasoning. Therefore, also in regard to those propositions, which are understood, the intellect cannot err, as in the case of first principles from which arises infallible truth in the certitude of scientific conclusions.

The intellect, however, may be accidentally deceived in the quiddity of composite things, not by the defect of its organ, for the intellect is a faculty that is independent of an organ; but on the part of the composition affecting the definition, when, for instance, the definition of a thing is false in relation to something else, as the definition of a circle applied to a triangle; or when a definition is false in itself as involving the composition of things incompatible; as, for instance, to describe anything as “a rational winged animal.” Hence as regards simple objects not subject to composite definitions we cannot be deceived unless, indeed, we understand nothing whatever about them, as is said Metaph. ix, Did. viii, 10.

Reply to Objection 1. The Philosopher says that falsehood is in the intellect in regard to composition and division. The same answer applies to the Second Objection concerning opinion and reasoning, and to the Third Objection, concerning the error of the sinner, who errs in the practical judgment of the appetible object. But in the absolute consideration of the quiddity of a thing, and of those things which are known thereby, the intellect is never deceived. In this sense are to be understood the authorities quoted in proof of the opposite conclusion.

Objection 1. It would seem that one person cannot understand one and the same thing better than another can. For Augustine says (QQ. 83, qu. 32), “Whoever understands a thing otherwise than as it is, does not understand it at all. Hence it is clear that there is a perfect understanding, than which none other is more perfect: and therefore there are not infinite degrees of understanding a thing: nor can one person understand a thing better than another can.”

Objection 2. Further, the intellect is true in its act of understanding. But truth, being a certain equality between thought and thing, is not subject to more or less; for a thing cannot be said to be more or less equal. Therefore a thing cannot be more or less understood.

Objection 3. Further, the intellect is the most formal of all that is in man. But different forms cause different species. Therefore if one man understands better than another, it would seem that they do not belong to the same species.

On the contrary, Experience shows that some understand more profoundly than do others; as one who carries a conclusion to its first principles and ultimate causes understands it better than the one who reduces it only to its proximate causes.

I answer that, A thing being understood more by one than by another may be taken in two senses. First, so that the word “more” be taken as determining the act of understanding as regards the thing understood; and thus, one cannot understand the same thing more than another, because to understand it otherwise than as it is, either better or worse, would entail being deceived, and such a one would not understand it, as Augustine argues

(QQ. 83, qu. 32). In another sense the word “more” can be taken as determining the act of understanding on the part of him who understands; and so one may understand the same thing better than someone else, through having a greater power of understanding: just as a man may see a thing better with his bodily sight, whose power is greater, and whose sight is more perfect. The same applies to the intellect in two ways. First, as regards the intellect itself, which is more perfect. For it is plain that the better the disposition of a body, the better the soul allotted to it; which clearly appears in things of different species: and the reason thereof is that act and form are received into matter according to matter’s capacity: thus because some men have bodies of better disposition, their souls have a greater power of understanding, wherefore it is said (De Anima ii, 9), that “it is to be observed that those who have soft flesh are of apt mind.” Secondly, this occurs in regard to the lower powers of which the intellect has need in its operation: for those in whom the imaginative, cogitative, and memorative powers are of better disposition, are better disposed to understand.

The reply to the First Objection is clear from the above; likewise the reply to the Second, for the truth of the intellect consists in the intellect understanding a thing as it is.

Reply to Objection 3. The difference of form which is due only to the different disposition of matter, causes not a specific but only a numerical difference: for different individuals have different forms, diversified according to the difference of matter.

Objection 1. It would seem that the intellect understands the indivisible before the divisible. For the Philosopher says (*Phys.* i, 1) that “we understand and know from the knowledge of principles and elements.” But principles are indivisible, and elements are of divisible things. Therefore the indivisible is known to us before the divisible.

Objection 2. Further, the definition of a thing contains what is known previously, for a definition “proceeds from the first and more known,” as is said *Topic.* vi, 4. But the indivisible is part of the definition of the divisible; as a point comes into the definition of a line; for as Euclid says, “a line is length without breadth, the extremities of which are points”; also unity comes into the definition of number, for “number is multitude measured by one,” as is said *Metaph.* x, *Did.* ix, 6. Therefore our intellect understands the indivisible before the divisible.

Objection 3. Further, “Like is known by like.” But the indivisible is more like to the intellect than is the divisible; because “the intellect is simple” (*De Anima* iii, 4). Therefore our intellect first knows the indivisible.

On the contrary, It is said (*De Anima* iii, 6) that “the indivisible is expressed as a privation.” But privation is known secondarily. Therefore likewise is the indivisible.

I answer that, The object of our intellect in its present state is the quiddity of a material thing, which it abstracts from the phantasms, as above stated (q. 84, a. 7). And since that which is known first and of itself by our cognitive power is its proper object, we must consider its relationship to that quiddity in order to discover in what order the indivisible is known. Now the indivisible is threefold, as is said *De Anima* iii, 6. First, the continuous is indivisible, since actually it is undivided, although potentially divisible: and this indivisible is known to us before its division, which is a division into parts: because confused knowledge is prior to distinct knowledge, as we have said above (a. 3). Secondly, the indivisible is so called in relation to species, as man’s reason is something indivisible. This way, also, the indivisible is understood before its division into logical parts, as we have said above (*De Anima* iii, 6); and again before the intellect disposes and divides by af-

firmation and negation. The reason of this is that both these kinds of indivisible are understood by the intellect of itself, as being its proper object. The third kind of indivisible is what is altogether indivisible, as a point and unity, which cannot be divided either actually or potentially. And this indivisible is known secondarily, through the privation of divisibility. Wherefore a point is defined by way of privation “as that which has no parts”; and in like manner the notion of “one” is that is “indivisible,” as stated in *Metaph.* x, *Did.* ix, 1. And the reason of this is that this indivisible has a certain opposition to a corporeal being, the quiddity of which is the primary and proper object of the intellect.

But if our intellect understood by participation of certain separate indivisible (forms), as the Platonists maintained, it would follow that a like indivisible is understood primarily; for according to the Platonists what is first is first participated by things.

Reply to Objection 1. In the acquisition of knowledge, principles and elements are not always (known) first: for sometimes from sensible effects we arrive at the knowledge of principles and intelligible causes. But in perfect knowledge, the knowledge of effects always depends on the knowledge of principles and elements: for as the Philosopher says in the same passage: “Then do we consider that we know, when we can resolve principles into their causes.”

Reply to Objection 2. A point is not included in the definition of a line in general: for it is manifest that in a line of indefinite length, and in a circular line, there is no point, save potentially. Euclid defines a finite straight line: and therefore he mentions a point in the definition, as the limit in the definition of that which is limited. Unity is the measure of number: wherefore it is included in the definition of a measured number. But it is not included in the definition of the divisible, but rather conversely.

Reply to Objection 3. The likeness through which we understand is the species of the known in the knower; therefore a thing is known first, not on account of its natural likeness to the cognitive power, but on account of the power’s aptitude for the object: otherwise sight would perceive hearing rather than color.

FIRST PART, QUESTION 86

What Our Intellect Knows in Material Things (In Four Articles)

We now have to consider what our intellect knows in material things. Under this head there are four points of inquiry:

- (1) Whether it knows singulars?
- (2) Whether it knows the infinite?
- (3) Whether it knows contingent things?
- (4) Whether it knows future things?

Whether our intellect knows singulars?

Ia q. 86 a. 1

Objection 1. It would seem that our intellect knows singulars. For whoever knows composition, knows the terms of composition. But our intellect knows this composition; “Socrates is a man”: for it belongs to the intellect to form a proposition. Therefore our intellect knows this singular, Socrates.

Objection 2. Further, the practical intellect directs to action. But action has relation to singular things. Therefore the intellect knows the singular.

Objection 3. Further, our intellect understands itself. But in itself it is a singular, otherwise it would have no action of its own; for actions belong to singulars. Therefore our intellect knows singulars.

Objection 4. Further, a superior power can do whatever is done by an inferior power. But sense knows the singular. Much more, therefore, can the intellect know it.

On the contrary, The Philosopher says (Phys. i, 5), that “the universal is known by reason; and the singular is known by sense.”

I answer that, Our intellect cannot know the singular in material things directly and primarily. The reason of this is that the principle of singularity in material things is individual matter, whereas our intellect, as have said above (q. 85, a. 1), understands by abstracting the intelligible species from such matter. Now what is abstracted from individual matter is the universal. Hence our intellect knows directly the universal only. But indirectly, and as it were by a kind of reflection, it can know the singular, because, as we have

said above (q. 85, a. 7), even after abstracting the intelligible species, the intellect, in order to understand, needs to turn to the phantasms in which it understands the species, as is said De Anima iii, 7. Therefore it understands the universal directly through the intelligible species, and indirectly the singular represented by the phantasm. And thus it forms the proposition “Socrates is a man.” Wherefore the reply to the first objection is clear.

Reply to Objection 2. The choice of a particular thing to be done is as the conclusion of a syllogism formed by the practical intellect, as is said Ethic. vii, 3. But a singular proposition cannot be directly concluded from a universal proposition, except through the medium of a singular proposition. Therefore the universal principle of the practical intellect does not move save through the medium of the particular apprehension of the sensitive part, as is said De Anima iii, 11.

Reply to Objection 3. Intelligibility is incompatible with the singular not as such, but as material, for nothing can be understood otherwise than immaterially. Therefore if there be an immaterial singular such as the intellect, there is no reason why it should not be intelligible.

Reply to Objection 4. The higher power can do what the lower power can, but in a more eminent way. Wherefore what the sense knows materially and concretely, which is to know the singular directly, the intellect knows immaterially and in the abstract, which is to know the universal.

Whether our intellect can know the infinite?

Ia q. 86 a. 2

Objection 1. It would seem that our intellect can know the infinite. For God excels all infinite things. But our intellect can know God, as we have said above (q. 12, a. 1). Much more, therefore, can our intellect know all other infinite things.

Objection 2. Further, our intellect can naturally know “genera” and “species.” But there is an infinity of species in some genera, as in number, proportion, and figure. Therefore our intellect can know the infinite.

Objection 3. Further, if one body can coexist with another in the same place, there is nothing to prevent an infinite number of bodies being in one place. But one intelligible species can exist with another in the same intellect, for many things can be habitually known at the same time. Therefore our intellect can have an habitual knowledge of an infinite number of things.

Objection 4. Further, as the intellect is not a corporeal faculty, as we have said (q. 76, a. 1), it appears to be

an infinite power. But an infinite power has a capacity for an infinite object. Therefore our intellect can know the infinite.

On the contrary, It is said (Phys. i, 4) that “the infinite, considered as such, is unknown.”

I answer that, Since a faculty and its object are proportional to each other, the intellect must be related to the infinite, as is its object, which is the quiddity of a material thing. Now in material things the infinite does not exist actually, but only potentially, in the sense of one succeeding another, as is said Phys. iii, 6. Therefore infinity is potentially in our mind through its considering successively one thing after another: because never does our intellect understand so many things, that it cannot understand more.

On the other hand, our intellect cannot understand the infinite either actually or habitually. Not actually, for our intellect cannot know actually at the same time, except what it knows through one species. But the infinite is not represented by one species, for if it were it would be something whole and complete. Consequently it cannot be understood except by a successive consideration of one part after another, as is clear from its definition (Phys. iii, 6): for the infinite is that “from which, however much we may take, there always remains something to be taken.” Thus the infinite could not be known actually, unless all its parts were counted: which is impossible.

For the same reason we cannot have habitual knowledge of the infinite: because in us habitual knowledge results from actual consideration: since by understanding we acquire knowledge, as is said Ethic. ii, 1. Wherefore it would not be possible for us to have a habit of an infinity of things distinctly known, unless we had already considered the entire infinity thereof, counting them according to the succession of our knowledge: which is impossible. And therefore neither actually nor habitually can our intellect know the infinite, but only potentially as explained above.

Reply to Objection 1. As we have said above (q. 7, a. 1), God is called infinite, because He is a form unlimited by matter; whereas in material things, the term ‘infinite’ is applied to that which is deprived of any formal term. And form being known in itself, whereas matter cannot be known without form, it follows that the material infinite is in itself unknowable. But the formal infinite, God, is of Himself known; but He is unknown to us by reason of our feeble intellect, which in its present state has a natural aptitude for material objects only. Therefore we cannot know God in our present life except through material effects. In the future life this defect of intellect will be removed by the state of glory, when we shall be able to see the Essence of God Himself, but without being able to comprehend Him.

Reply to Objection 2. The nature of our mind is to know species abstracted from phantasms; therefore it cannot know actually or habitually species of numbers or figures that are not in the imagination, except in a general way and in their universal principles; and this is to know them potentially and confusedly.

Reply to Objection 3. If two or more bodies were in the same place, there would be no need for them to occupy the place successively, in order for the things placed to be counted according to this succession of occupation. On the other hand, the intelligible species enter into our intellect successively; since many things cannot be actually understood at the same time: and therefore there must be a definite and not an infinite number of species in our intellect.

Reply to Objection 4. As our intellect is infinite in power, so does it know the infinite. For its power is indeed infinite inasmuch as it is not terminated by corporeal matter. Moreover it can know the universal, which is abstracted from individual matter, and which consequently is not limited to one individual, but, considered in itself, extends to an infinite number of individuals.

Whether our intellect can know contingent things?

Ia q. 86 a. 3

Objection 1. It would seem that the intellect cannot know contingent things: because, as the Philosopher says (Ethic. vi, 6), the objects of understanding, wisdom and knowledge are not contingent, but necessary things.

Objection 2. Further, as stated in Phys. iv, 12, “what sometimes is and sometimes is not, is measured by time.” Now the intellect abstracts from time, and from other material conditions. Therefore, as it is proper to a contingent thing sometime to be and sometime not to be, it seems that contingent things are not known by the intellect.

On the contrary, All knowledge is in the intellect. But some sciences are of the contingent things, as the moral sciences, the objects of which are human actions

subject to free-will; and again, the natural sciences in as far as they relate to things generated and corruptible. Therefore the intellect knows contingent things.

I answer that, Contingent things can be considered in two ways; either as contingent, or as containing some element of necessity, since every contingent thing has in it something necessary: for example, that Socrates runs, is in itself contingent; but the relation of running to motion is necessary, for it is necessary that Socrates move if he runs. Now contingency arises from matter, for contingency is a potentiality to be or not to be, and potentiality belongs to matter; whereas necessity results from form, because whatever is consequent on form is of necessity in the subject. But matter is the individualizing principle: whereas the universal comes from

the abstraction of the form from the particular matter. Moreover it was laid down above (a. 1) that the intellect of itself and directly has the universal for its object; while the object of sense is the singular, which in a certain way is the indirect object of the intellect, as we have said above (a. 1). Therefore the contingent, considered as such, is known directly by sense and indirectly by the intellect; while the universal and neces-

sary principles of contingent things are known only by the intellect. Hence if we consider the objects of science in their universal principles, then all science is of necessary things. But if we consider the things themselves, thus some sciences are of necessary things, some of contingent things.

From which the replies to the objections are clear.

Whether our intellect can know the future?

Ia q. 86 a. 4

Objection 1. It would seem that our intellect knows the future. For our intellect knows by means of intelligible species abstracted from the “here” and “now,” and related indifferently to all time. But it can know the present. Therefore it can know the future.

Objection 2. Further, man, while his senses are in suspense, can know some future things, as in sleep, and in frenzy. But the intellect is freer and more vigorous when removed from sense. Therefore the intellect of its own nature can know the future.

Objection 3. The intellectual knowledge of man is superior to any knowledge of brutes. But some animals know the future; thus crows by their frequent cawing foretell rain. Therefore much more can the intellect know the future.

On the contrary, It is written (Eccles. 8:6,7), “There is a great affliction for man, because he is ignorant of things past; and things to come he cannot know by any messenger.”

I answer that, We must apply the same distinction to future things, as we applied above (a. 3) to contingent things. For future things considered as subject to time are singular, and the human intellect knows them by reflection only, as stated above (a. 1). But the principles of future things may be universal; and thus they may enter the domain of the intellect and become the objects of science.

Speaking, however, of the knowledge of the future in a general way, we must observe that the future may be known in two ways: either in itself, or in its cause. The future cannot be known in itself save by God alone; to Whom even that is present which in the course of events is future, forasmuch as from eternity His glance embraces the whole course of time, as we have said above when treating of God’s knowledge (q. 14, a. 13). But forasmuch as it exists in its cause, the future can be known by us also. And if, indeed, the cause be such as to have a necessary connection with its future result, then the future is known with scientific certitude, just as the astronomer foresees the future eclipse. If, however, the cause be such as to produce a certain result more frequently than not, then can the future be known more or less conjecturally, according as its cause is more or less inclined to produce the effect.

Reply to Objection 1. This argument considers that

knowledge which is drawn from universal causal principles; from these the future may be known, according to the order of the effects to the cause.

Reply to Objection 2. As Augustine says (Confess. xii*), the soul has a certain power of forecasting, so that by its very nature it can know the future; hence when withdrawn from corporeal sense, and, as it were, concentrated on itself, it shares in the knowledge of the future. Such an opinion would be reasonable if we were to admit that the soul receives knowledge by participating the ideas as the Platonists maintained, because in that case the soul by its nature would know the universal causes of all effects, and would only be impeded in its knowledge by the body, and hence when withdrawn from the corporeal senses it would know the future.

But since it is connatural to our intellect to know things, not thus, but by receiving its knowledge from the senses; it is not natural for the soul to know the future when withdrawn from the senses: rather does it know the future by the impression of superior spiritual and corporeal causes; of spiritual causes, when by Divine power the human intellect is enlightened through the ministry of angels, and the phantasms are directed to the knowledge of future events; or, by the influence of demons, when the imagination is moved regarding the future known to the demons, as explained above (q. 57, a. 3). The soul is naturally more inclined to receive these impressions of spiritual causes when it is withdrawn from the senses, as it is then nearer to the spiritual world, and freer from external distractions. The same may also come from superior corporeal causes. For it is clear that superior bodies influence inferior bodies. Hence, in consequence of the sensitive faculties being acts of corporeal organs, the influence of the heavenly bodies causes the imagination to be affected, and so, as the heavenly bodies cause many future events, the imagination receives certain images of some such events. These images are perceived more at night and while we sleep than in the daytime and while we are awake, because, as stated in *De Somn. et Vigil.* ii†, “impressions made by day are evanescent. The night air is calmer, when silence reigns, hence bodily impressions are made in sleep, when slight internal movements are felt more than in wakefulness, and such movements produce in the imagination images from which the fu-

* Gen. ad lit. xii. 13 † De Divinat. per somn. ii.

ture may be foreseen.”

Reply to Objection 3. Brute animals have no power above the imagination wherewith to regulate it, as man has his reason, and therefore their imagination follows entirely the influence of the heavenly bodies. Thus from such animals’ movements some future things, such as rain and the like, may be known rather from human

movements directed by reason. Hence the Philosopher says (De Somn. et Vig.), that “some who are most imprudent are most far-seeing; for their intelligence is not burdened with cares, but is as it were barren and bare of all anxiety moving at the caprice of whatever is brought to bear on it.”

Objection 1. It would seem that our intellect knows singulars. For whoever knows composition, knows the terms of composition. But our intellect knows this composition; “Socrates is a man”: for it belongs to the intellect to form a proposition. Therefore our intellect knows this singular, Socrates.

Objection 2. Further, the practical intellect directs to action. But action has relation to singular things. Therefore the intellect knows the singular.

Objection 3. Further, our intellect understands itself. But in itself it is a singular, otherwise it would have no action of its own; for actions belong to singulars. Therefore our intellect knows singulars.

Objection 4. Further, a superior power can do whatever is done by an inferior power. But sense knows the singular. Much more, therefore, can the intellect know it.

On the contrary, The Philosopher says (Phys. i, 5), that “the universal is known by reason; and the singular is known by sense.”

I answer that, Our intellect cannot know the singular in material things directly and primarily. The reason of this is that the principle of singularity in material things is individual matter, whereas our intellect, as have said above (q. 85, a. 1), understands by abstracting the intelligible species from such matter. Now what is abstracted from individual matter is the universal. Hence our intellect knows directly the universal only. But indirectly, and as it were by a kind of reflection, it can know the singular, because, as we have

said above (q. 85, a. 7), even after abstracting the intelligible species, the intellect, in order to understand, needs to turn to the phantasms in which it understands the species, as is said De Anima iii, 7. Therefore it understands the universal directly through the intelligible species, and indirectly the singular represented by the phantasm. And thus it forms the proposition “Socrates is a man.” Wherefore the reply to the first objection is clear.

Reply to Objection 2. The choice of a particular thing to be done is as the conclusion of a syllogism formed by the practical intellect, as is said Ethic. vii, 3. But a singular proposition cannot be directly concluded from a universal proposition, except through the medium of a singular proposition. Therefore the universal principle of the practical intellect does not move save through the medium of the particular apprehension of the sensitive part, as is said De Anima iii, 11.

Reply to Objection 3. Intelligibility is incompatible with the singular not as such, but as material, for nothing can be understood otherwise than immaterially. Therefore if there be an immaterial singular such as the intellect, there is no reason why it should not be intelligible.

Reply to Objection 4. The higher power can do what the lower power can, but in a more eminent way. Wherefore what the sense knows materially and concretely, which is to know the singular directly, the intellect knows immaterially and in the abstract, which is to know the universal.

Objection 1. It would seem that our intellect can know the infinite. For God excels all infinite things. But our intellect can know God, as we have said above (q. 12, a. 1). Much more, therefore, can our intellect know all other infinite things.

Objection 2. Further, our intellect can naturally know “genera” and “species.” But there is an infinity of species in some genera, as in number, proportion, and figure. Therefore our intellect can know the infinite.

Objection 3. Further, if one body can coexist with another in the same place, there is nothing to prevent an infinite number of bodies being in one place. But one intelligible species can exist with another in the same intellect, for many things can be habitually known at the same time. Therefore our intellect can have a habitual knowledge of an infinite number of things.

Objection 4. Further, as the intellect is not a corporeal faculty, as we have said (q. 76, a. 1), it appears to be an infinite power. But an infinite power has a capacity for an infinite object. Therefore our intellect can know the infinite.

On the contrary, It is said (Phys. i, 4) that “the infinite, considered as such, is unknown.”

I answer that, Since a faculty and its object are proportional to each other, the intellect must be related to the infinite, as is its object, which is the quiddity of a material thing. Now in material things the infinite does not exist actually, but only potentially, in the sense of one succeeding another, as is said Phys. iii, 6. Therefore infinity is potentially in our mind through its considering successively one thing after another: because never does our intellect understand so many things, that it cannot understand more.

On the other hand, our intellect cannot understand the infinite either actually or habitually. Not actually, for our intellect cannot know actually at the same time, except what it knows through one species. But the infinite is not represented by one species, for if it were it would be something whole and complete. Consequently it cannot be understood except by a successive consideration of one part after another, as is clear from its definition (Phys. iii, 6): for the infinite is that “from which, however much we may take, there always remains something to be taken.” Thus the infinite could not be known actually, unless all its parts were counted: which is impossible.

For the same reason we cannot have habitual knowledge of the infinite: because in us habitual knowledge

results from actual consideration: since by understanding we acquire knowledge, as is said Ethic. ii, 1. Wherefore it would not be possible for us to have a habit of an infinity of things distinctly known, unless we had already considered the entire infinity thereof, counting them according to the succession of our knowledge: which is impossible. And therefore neither actually nor habitually can our intellect know the infinite, but only potentially as explained above.

Reply to Objection 1. As we have said above (q. 7, a. 1), God is called infinite, because He is a form unlimited by matter; whereas in material things, the term ‘infinite’ is applied to that which is deprived of any formal term. And form being known in itself, whereas matter cannot be known without form, it follows that the material infinite is in itself unknowable. But the formal infinite, God, is of Himself known; but He is unknown to us by reason of our feeble intellect, which in its present state has a natural aptitude for material objects only. Therefore we cannot know God in our present life except through material effects. In the future life this defect of intellect will be removed by the state of glory, when we shall be able to see the Essence of God Himself, but without being able to comprehend Him.

Reply to Objection 2. The nature of our mind is to know species abstracted from phantasms; therefore it cannot know actually or habitually species of numbers or figures that are not in the imagination, except in a general way and in their universal principles; and this is to know them potentially and confusedly.

Reply to Objection 3. If two or more bodies were in the same place, there would be no need for them to occupy the place successively, in order for the things placed to be counted according to this succession of occupation. On the other hand, the intelligible species enter into our intellect successively; since many things cannot be actually understood at the same time: and therefore there must be a definite and not an infinite number of species in our intellect.

Reply to Objection 4. As our intellect is infinite in power, so does it know the infinite. For its power is indeed infinite inasmuch as it is not terminated by corporeal matter. Moreover it can know the universal, which is abstracted from individual matter, and which consequently is not limited to one individual, but, considered in itself, extends to an infinite number of individuals.

Objection 1. It would seem that the intellect cannot know contingent things: because, as the Philosopher says (*Ethic.* vi, 6), the objects of understanding, wisdom and knowledge are not contingent, but necessary things.

Objection 2. Further, as stated in *Phys.* iv, 12, “what sometimes is and sometimes is not, is measured by time.” Now the intellect abstracts from time, and from other material conditions. Therefore, as it is proper to a contingent thing sometime to be and sometime not to be, it seems that contingent things are not known by the intellect.

On the contrary, All knowledge is in the intellect. But some sciences are of the contingent things, as the moral sciences, the objects of which are human actions subject to free-will; and again, the natural sciences in as far as they relate to things generated and corruptible. Therefore the intellect knows contingent things.

I answer that, Contingent things can be considered in two ways; either as contingent, or as containing some element of necessity, since every contingent thing has in it something necessary: for example, that Socrates runs, is in itself contingent; but the relation of running

to motion is necessary, for it is necessary that Socrates move if he runs. Now contingency arises from matter, for contingency is a potentiality to be or not to be, and potentiality belongs to matter; whereas necessity results from form, because whatever is consequent on form is of necessity in the subject. But matter is the individualizing principle: whereas the universal comes from the abstraction of the form from the particular matter. Moreover it was laid down above (a. 1) that the intellect of itself and directly has the universal for its object; while the object of sense is the singular, which in a certain way is the indirect object of the intellect, as we have said above (a. 1). Therefore the contingent, considered as such, is known directly by sense and indirectly by the intellect; while the universal and necessary principles of contingent things are known only by the intellect. Hence if we consider the objects of science in their universal principles, then all science is of necessary things. But if we consider the things themselves, thus some sciences are of necessary things, some of contingent things.

From which the replies to the objections are clear.

Objection 1. It would seem that our intellect knows the future. For our intellect knows by means of intelligible species abstracted from the “here” and “now,” and related indifferently to all time. But it can know the present. Therefore it can know the future.

Objection 2. Further, man, while his senses are in suspense, can know some future things, as in sleep, and in frenzy. But the intellect is freer and more vigorous when removed from sense. Therefore the intellect of its own nature can know the future.

Objection 3. The intellectual knowledge of man is superior to any knowledge of brutes. But some animals know the future; thus crows by their frequent cawing foretell rain. Therefore much more can the intellect know the future.

On the contrary, It is written (Eccles. 8:6,7), “There is a great affliction for man, because he is ignorant of things past; and things to come he cannot know by any messenger.”

Answer that, We must apply the same distinction to future things, as we applied above (a. 3) to contingent things. For future things considered as subject to time are singular, and the human intellect knows them by reflection only, as stated above (a. 1). But the principles of future things may be universal; and thus they may enter the domain of the intellect and become the objects of science.

Speaking, however, of the knowledge of the future in a general way, we must observe that the future may be known in two ways: either in itself, or in its cause. The future cannot be known in itself save by God alone; to Whom even that is present which in the course of events is future, forasmuch as from eternity His glance embraces the whole course of time, as we have said above when treating of God’s knowledge (q. 14, a. 13). But forasmuch as it exists in its cause, the future can be known by us also. And if, indeed, the cause be such as to have a necessary connection with its future result, then the future is known with scientific certitude, just as the astronomer foresees the future eclipse. If, however, the cause be such as to produce a certain result more frequently than not, then can the future be known more or less conjecturally, according as its cause is more or less inclined to produce the effect.

Reply to Objection 1. This argument considers that knowledge which is drawn from universal causal principles; from these the future may be known, according to the order of the effects to the cause.

Reply to Objection 2. As Augustine says (Confess. xii*), the soul has a certain power of forecasting, so that by its very nature it can know the future; hence when withdrawn from corporeal sense, and, as it were,

concentrated on itself, it shares in the knowledge of the future. Such an opinion would be reasonable if we were to admit that the soul receives knowledge by participating the ideas as the Platonists maintained, because in that case the soul by its nature would know the universal causes of all effects, and would only be impeded in its knowledge by the body, and hence when withdrawn from the corporeal senses it would know the future.

But since it is unnatural to our intellect to know things, not thus, but by receiving its knowledge from the senses; it is not natural for the soul to know the future when withdrawn from the senses: rather does it know the future by the impression of superior spiritual and corporeal causes; of spiritual causes, when by Divine power the human intellect is enlightened through the ministry of angels, and the phantasms are directed to the knowledge of future events; or, by the influence of demons, when the imagination is moved regarding the future known to the demons, as explained above (q. 57, a. 3). The soul is naturally more inclined to receive these impressions of spiritual causes when it is withdrawn from the senses, as it is then nearer to the spiritual world, and freer from external distractions. The same may also come from superior corporeal causes. For it is clear that superior bodies influence inferior bodies. Hence, in consequence of the sensitive faculties being acts of corporeal organs, the influence of the heavenly bodies causes the imagination to be affected, and so, as the heavenly bodies cause many future events, the imagination receives certain images of some such events. These images are perceived more at night and while we sleep than in the daytime and while we are awake, because, as stated in *De Somn. et Vigil.* ii†, “impressions made by day are evanescent. The night air is calmer, when silence reigns, hence bodily impressions are made in sleep, when slight internal movements are felt more than in wakefulness, and such movements produce in the imagination images from which the future may be foreseen.”

Reply to Objection 3. Brute animals have no power above the imagination wherewith to regulate it, as man has his reason, and therefore their imagination follows entirely the influence of the heavenly bodies. Thus from such animals’ movements some future things, such as rain and the like, may be known rather from human movements directed by reason. Hence the Philosopher says (*De Somn. et Vig.*), that “some who are most imprudent are most far-seeing; for their intelligence is not burdened with cares, but is as it were barren and bare of all anxiety moving at the caprice of whatever is brought to bear on it.”

* Gen. ad lit. xii. 13 † De Divinat. per somn. ii.

FIRST PART, QUESTION 87

How the Intellectual Soul Knows Itself and All Within Itself (In Four Articles)

We have now to consider how the intellectual soul knows itself and all within itself. Under this head there are four points of inquiry:

- (1) Whether the soul knows itself by its own essence?
- (2) Whether it knows its own habits?
- (3) How does the intellect know its own act?
- (4) How does it know the act of the will?

Whether the intellectual soul knows itself by its essence?

Ia q. 87 a. 1

Objection 1. It would seem that the intellectual soul knows itself by its own essence. For Augustine says (De Trin. ix, 3), that “the mind knows itself, because it is incorporeal.”

Objection 2. Further, both angels and human souls belong to the genus of intellectual substance. But an angel understands itself by its own essence. Therefore likewise does the human soul.

Objection 3. Further, “in things void of matter, the intellect and that which is understood are the same” (De Anima iii, 4). But the human mind is void of matter, not being the act of a body as stated above (q. 76, a. 1). Therefore the intellect and its object are the same in the human mind; and therefore the human mind understands itself by its own essence.

On the contrary, It is said (De Anima iii, 4) that “the intellect understands itself in the same way as it understands other things.” But it understands other things, not by their essence, but by their similitudes. Therefore it does not understand itself by its own essence.

I answer that, Everything is knowable so far as it is in act, and not, so far as it is in potentiality (Metaph. ix, Did. viii, 9): for a thing is a being, and is true, and therefore knowable, according as it is actual. This is quite clear as regards sensible things, for the eye does not see what is potentially, but what is actually colored. In like manner it is clear that the intellect, so far as it knows material things, does not know save what is in act: and hence it does not know primary matter except as proportionate to form, as is stated Phys. i, 7. Consequently immaterial substances are intelligible by their own essence according as each one is actual by its own essence.

Therefore it is that the Essence of God, the pure and perfect act, is simply and perfectly in itself intelligible; and hence God by His own Essence knows Himself, and all other things also. The angelic essence belongs, indeed, to the genus of intelligible things as “act,” but not as a “pure act,” nor as a “complete act,” and hence the angel’s act of intelligence is not completed by his essence. For although an angel understands himself by his own essence, still he cannot understand all

other things by his own essence; for he knows things other than himself by their likenesses. Now the human intellect is only a potentiality in the genus of intelligible beings, just as primary matter is a potentiality as regards sensible beings; and hence it is called “possible”*. Therefore in its essence the human mind is potentially understanding. Hence it has in itself the power to understand, but not to be understood, except as it is made actual. For even the Platonists asserted that an order of intelligible beings existed above the order of intellects, forasmuch as the intellect understands only by participation of the intelligible; for they said that the participator is below what it participates. If, therefore, the human intellect, as the Platonists held, became actual by participating separate intelligible forms, it would understand itself by such participation of incorporeal beings. But as in this life our intellect has material and sensible things for its proper natural object, as stated above (q. 84, a. 7), it understands itself according as it is made actual by the species abstracted from sensible things, through the light of the active intellect, which not only actuates the intelligible things themselves, but also, by their instrumentality, actuates the passive intellect. Therefore the intellect knows itself not by its essence, but by its act. This happens in two ways: In the first place, singularly, as when Socrates or Plato perceives that he has an intellectual soul because he perceives that he understands. In the second place, universally, as when we consider the nature of the human mind from knowledge of the intellectual act. It is true, however, that the judgment and force of this knowledge, whereby we know the nature of the soul, comes to us according to the derivation of our intellectual light from the Divine Truth which contains the types of all things as above stated (q. 84, a. 5). Hence Augustine says (De Trin. ix, 6): “We gaze on the inviolable truth whence we can as perfectly as possible define, not what each man’s mind is, but what it ought to be in the light of the eternal types.” There is, however, a difference between these two kinds of knowledge, and it consists in this, that the mere presence of the mind suffices for the first; the mind itself being the principle of action whereby it perceives itself, and hence it is

* Possibilis—elsewhere in this translation rendered “passive”—Ed.

said to know itself by its own presence. But as regards the second kind of knowledge, the mere presence of the mind does not suffice, and there is further required a careful and subtle inquiry. Hence many are ignorant of the soul's nature, and many have erred about it. So Augustine says (*De Trin.* x, 9), concerning such mental inquiry: "Let the mind strive not to see itself as if it were absent, but to discern itself as present"—i.e. to know how it differs from other things; which is to know its essence and nature.

Reply to Objection 1. The mind knows itself by means of itself, because at length it acquires knowledge of itself, though led thereto by its own act: because it is itself that it knows since it loves itself, as he says in the same passage. For a thing can be called self-evident in two ways, either because we can know it by nothing else except itself, as first principles are called self-evident; or because it is not accidentally knowable, as color is visible of itself, whereas substance is visible by its accident.

Reply to Objection 2. The essence of an angel is an act in the genus of intelligible things, and therefore it is both intellect and the thing understood. Hence an angel apprehends his own essence through itself: not so the human mind, which is either altogether in potentiality to intelligible things—as is the passive intellect—

or is the act of intelligible things abstracted from the phantasms—as is the active intellect.

Reply to Objection 3. This saying of the Philosopher is universally true in every kind of intellect. For as sense in act is the sensible in act, by reason of the sensible likeness which is the form of sense in act, so likewise the intellect in act is the object understood in act, by reason of the likeness of the thing understood, which is the form of the intellect in act. So the human intellect, which becomes actual by the species of the object understood, is itself understood by the same species as by its own form. Now to say that in "things without matter the intellect and what is understood are the same," is equal to saying that "as regards things actually understood the intellect and what is understood are the same." For a thing is actually understood in that it is immaterial. But a distinction must be drawn: since the essences of some things are immaterial—as the separate substances called angels, each of which is understood and understood, whereas there are other things whose essences are not wholly immaterial, but only the abstract likenesses thereof. Hence the Commentator says (*De Anima* iii) that the proposition quoted is true only of separate substances; because in a sense it is verified in their regard, and not in regard of other substances, as already stated (*Reply obj.* 2).

Whether our intellect knows the habits of the soul by their essence?

Ia q. 87 a. 2

Objection 1. It would seem that our intellect knows the habits of the soul by their essence. For Augustine says (*De Trin.* xiii, 1): "Faith is not seen in the heart wherein it abides, as the soul of a man may be seen by another from the movement of the body; but we know most certainly that it is there, and conscience proclaims its existence"; and the same principle applies to the other habits of the soul. Therefore the habits of the soul are not known by their acts, but by themselves.

Objection 2. Further, material things outside the soul are known by their likeness being present in the soul, and are said therefore to be known by their likenesses. But the soul's habits are present by their essence in the soul. Therefore the habits of the soul are known by their essence.

Objection 3. Further, "whatever is the cause of a thing being such is still more so." But habits and intelligible species cause things to be known by the soul. Therefore they are still more known by the soul in themselves.

On the contrary, Habits like powers are the principles of acts. But as is said (*De Anima* ii, 4), "acts and operations are logically prior to powers." Therefore in the same way they are prior to habits; and thus habits, like the powers, are known by their acts.

I answer that, A habit is a kind of medium between mere power and mere act. Now, it has been said (a. 1) that nothing is known but as it is actual: therefore so far

as a habit fails in being a perfect act, it falls short in being of itself knowable, and can be known only by its act; thus, for example, anyone knows he has a habit from the fact that he can produce the act proper to that habit; or he may inquire into the nature and idea of the habit by considering the act. The first kind of knowledge of the habit arises from its being present, for the very fact of its presence causes the act whereby it is known. The second kind of knowledge of the habit arises from a careful inquiry, as is explained above of the mind (a. 1).

Reply to Objection 1. Although faith is not known by external movement of the body, it is perceived by the subject wherein it resides, by the interior act of the heart. For no one knows that he has faith unless he knows that he believes.

Reply to Objection 2. Habits are present in our intellect, not as its object since, in the present state of life, our intellect's object is the nature of a material thing as stated above (q. 84, a. 7), but as that by which it understands.

Reply to Objection 3. The axiom, "whatever is the cause of a thing being such, is still more so," is true of things that are of the same order, for instance, of the same kind of cause; for example, we may say that health is desirable on account of life, and therefore life is more desirable still. But if we take things of different orders the axiom is not true: for we may say that health is caused by medicine, but it does not follow that medicine

is more desirable than health, for health belongs to the order of final causes, whereas medicine belongs to the order of efficient causes. So of two things belonging essentially to the order of the objects of knowledge, the one which is the cause of the other being known, is the more known, as principles are more known than conclu-

sions. But habit as such does not belong to the order of objects of knowledge; nor are things known on account of the habit, as on account of an object known, but as on account of a disposition or form whereby the subject knows: and therefore the argument does not prove.

Whether our intellect knows its own act?

Ia q. 87 a. 3

Objection 1. It would seem that our intellect does not know its own act. For what is known is the object of the knowing faculty. But the act differs from the object. Therefore the intellect does not know its own act.

Objection 2. Further, whatever is known is known by some act. If, then, the intellect knows its own act, it knows it by some act, and again it knows that act by some other act; this is to proceed indefinitely, which seems impossible.

Objection 3. Further, the intellect has the same relation to its act as sense has to its act. But the proper sense does not feel its own act, for this belongs to the common sense, as stated *De Anima* iii, 2. Therefore neither does the intellect understand its own act.

On the contrary, Augustine says (*De Trin.* x, 11), "I understand that I understand."

I answer that, As stated above (Aa. 1,2) a thing is intelligible according as it is in act. Now the ultimate perfection of the intellect consists in its own operation: for this is not an act tending to something else in which lies the perfection of the work accomplished, as building is the perfection of the thing built; but it remains in the agent as its perfection and act, as is said *Metaph.* ix, *Did.* viii, 8. Therefore the first thing understood of the intellect is its own act of understanding. This occurs in different ways with different intellects. For there is an intellect, namely, the Divine, which is Its own act of intelligence, so that in God the understanding of His intelligence, and the understanding of His Essence, are one and the same act, because His Essence is His act of understanding. But there is another intellect, the angelic, which is not its own act of understanding, as we have said above (q. 79, a. 1), and yet the first object of that act is the angelic essence. Wherefore although there is a logical distinction between the act whereby he understands that he understands, and that whereby he understands his essence, yet he understands both by one and the same act; because to understand his own essence is the proper perfection of his essence, and by one and the same act is a thing, together with its perfec-

tion, understood. And there is yet another, namely, the human intellect, which neither is its own act of understanding, nor is its own essence the first object of its act of understanding, for this object is the nature of a material thing. And therefore that which is first known by the human intellect is an object of this kind, and that which is known secondarily is the act by which that object is known; and through the act the intellect itself is known, the perfection of which is this act of understanding. For this reason did the Philosopher assert that objects are known before acts, and acts before powers (*De Anima* ii, 4).

Reply to Objection 1. The object of the intellect is something universal, namely, "being" and "the true," in which the act also of understanding is comprised. Wherefore the intellect can understand its own act. But not primarily, since the first object of our intellect, in this state of life, is not every being and everything true, but "being" and "true," as considered in material things, as we have said above (q. 84, a. 7), from which it acquires knowledge of all other things.

Reply to Objection 2. The intelligent act of the human intellect is not the act and perfection of the material nature understood, as if the nature of the material thing and intelligent act could be understood by one act; just as a thing and its perfection are understood by one act. Hence the act whereby the intellect understands a stone is distinct from the act whereby it understands that it understands a stone; and so on. Nor is there any difficulty in the intellect being thus potentially infinite, as explained above (q. 86, a. 2).

Reply to Objection 3. The proper sense feels by reason of the immutation in the material organ caused by the external sensible. A material object, however, cannot immute itself; but one is immuted by another, and therefore the act of the proper sense is perceived by the common sense. The intellect, on the contrary, does not perform the act of understanding by the material immutation of an organ; and so there is no comparison.

Whether the intellect understands the act of the will?

Ia q. 87 a. 4

Objection 1. It would seem that the intellect does not understand the act of the will. For nothing is known by the intellect, unless it be in some way present in the intellect. But the act of the will is not in the intellect; since the will and the intellect are distinct. Therefore

the act of the will is not known by the intellect.

Objection 2. Further, the act is specified by the object. But the object of the will is not the same as the object of the intellect. Therefore the act of the will is specifically distinct from the object of the intellect, and

therefore the act of the will is not known by the intellect.

Objection 3. Augustine (Confess. x, 17) says of the soul's affections that "they are known neither by images as bodies are known; nor by their presence, like the arts; but by certain notions." Now it does not seem that there can be in the soul any other notions of things but either the essences of things known or the likenesses thereof. Therefore it seems impossible for the intellect to know such affections of the soul as the acts of the will.

On the contrary, Augustine says (De Trin. x, 11), "I understand that I will."

I answer that, As stated above (q. 59, a. 1), the act of the will is nothing but an inclination consequent on the form understood; just as the natural appetite is an inclination consequent on the natural form. Now the inclination of a thing resides in it according to its mode of existence; and hence the natural inclination resides in a natural thing naturally, and the inclination called the sensible appetite is in the sensible thing sensibly; and likewise the intelligible inclination, which is the act of the will, is in the intelligent subject intelligibly as in its principle and proper subject. Hence the Philosopher expresses himself thus (De Anima iii, 9)—that "the will is in the reason." Now whatever is intelligibly in an intelligent subject, is understood by that subject. Therefore

the act of the will is understood by the intellect, both inasmuch as one knows that one wills; and inasmuch as one knows the nature of this act, and consequently, the nature of its principle which is the habit or power.

Reply to Objection 1. This argument would hold good if the will and the intellect were in different subjects, as they are distinct powers; for then whatever was in the will would not be in the intellect. But as both are rooted in the same substance of the soul, and since one is in a certain way the principle of the other, consequently what is in the will is, in a certain way, also in the intellect.

Reply to Objection 2. The "good" and the "true" which are the objects of the will and of the intellect, differ logically, but one is contained in the other, as we have said above (q. 82, a. 4, ad 1; q. 16, a. 4, ad 1); for the true is good and the good is true. Therefore the objects of the will fall under the intellect, and those of the intellect can fall under the will.

Reply to Objection 3. The affections of the soul are in the intellect not by similitude only, like bodies; nor by being present in their subject, as the arts; but as the thing caused is in its principle, which contains some notion of the thing caused. And so Augustine says that the soul's affections are in the memory by certain notions.

Objection 1. It would seem that the intellectual soul knows itself by its own essence. For Augustine says (De Trin. ix, 3), that “the mind knows itself, because it is incorporeal.”

Objection 2. Further, both angels and human souls belong to the genus of intellectual substance. But an angel understands itself by its own essence. Therefore likewise does the human soul.

Objection 3. Further, “in things void of matter, the intellect and that which is understood are the same” (De Anima iii, 4). But the human mind is void of matter, not being the act of a body as stated above (q. 76, a. 1). Therefore the intellect and its object are the same in the human mind; and therefore the human mind understands itself by its own essence.

On the contrary, It is said (De Anima iii, 4) that “the intellect understands itself in the same way as it understands other things.” But it understands other things, not by their essence, but by their similitudes. Therefore it does not understand itself by its own essence.

I answer that, Everything is knowable so far as it is in act, and not, so far as it is in potentiality (Metaph. ix, Did. viii, 9): for a thing is a being, and is true, and therefore knowable, according as it is actual. This is quite clear as regards sensible things, for the eye does not see what is potentially, but what is actually colored. In like manner it is clear that the intellect, so far as it knows material things, does not know save what is in act: and hence it does not know primary matter except as proportionate to form, as is stated Phys. i, 7. Consequently immaterial substances are intelligible by their own essence according as each one is actual by its own essence.

Therefore it is that the Essence of God, the pure and perfect act, is simply and perfectly in itself intelligible; and hence God by His own Essence knows Himself, and all other things also. The angelic essence belongs, indeed, to the genus of intelligible things as “act,” but not as a “pure act,” nor as a “complete act,” and hence the angel’s act of intelligence is not completed by his essence. For although an angel understands himself by his own essence, still he cannot understand all other things by his own essence; for he knows things other than himself by their likenesses. Now the human intellect is only a potentiality in the genus of intelligible beings, just as primary matter is a potentiality as regards sensible beings; and hence it is called “possible”*. Therefore in its essence the human mind is potentially understanding. Hence it has in itself the power to understand, but not to be understood, except as it is made actual. For even the Platonists asserted that an order of intelligible beings existed above the order of intellects, forasmuch as the intellect understands only by participation of the intelligible; for they said that the participa-

tor is below what it participates. If, therefore, the human intellect, as the Platonists held, became actual by participating separate intelligible forms, it would understand itself by such participation of incorporeal beings. But as in this life our intellect has material and sensible things for its proper natural object, as stated above (q. 84, a. 7), it understands itself according as it is made actual by the species abstracted from sensible things, through the light of the active intellect, which not only actuates the intelligible things themselves, but also, by their instrumentality, actuates the passive intellect. Therefore the intellect knows itself not by its essence, but by its act. This happens in two ways: In the first place, singularly, as when Socrates or Plato perceives that he has an intellectual soul because he perceives that he understands. In the second place, universally, as when we consider the nature of the human mind from knowledge of the intellectual act. It is true, however, that the judgment and force of this knowledge, whereby we know the nature of the soul, comes to us according to the derivation of our intellectual light from the Divine Truth which contains the types of all things as above stated (q. 84, a. 5). Hence Augustine says (De Trin. ix, 6): “We gaze on the inviolable truth whence we can as perfectly as possible define, not what each man’s mind is, but what it ought to be in the light of the eternal types.” There is, however, a difference between these two kinds of knowledge, and it consists in this, that the mere presence of the mind suffices for the first; the mind itself being the principle of action whereby it perceives itself, and hence it is said to know itself by its own presence. But as regards the second kind of knowledge, the mere presence of the mind does not suffice, and there is further required a careful and subtle inquiry. Hence many are ignorant of the soul’s nature, and many have erred about it. So Augustine says (De Trin. x, 9), concerning such mental inquiry: “Let the mind strive not to see itself as if it were absent, but to discern itself as present”—i.e. to know how it differs from other things; which is to know its essence and nature.

Reply to Objection 1. The mind knows itself by means of itself, because at length it acquires knowledge of itself, though led thereto by its own act: because it is itself that it knows since it loves itself, as he says in the same passage. For a thing can be called self-evident in two ways, either because we can know it by nothing else except itself, as first principles are called self-evident; or because it is not accidentally knowable, as color is visible of itself, whereas substance is visible by its accident.

Reply to Objection 2. The essence of an angel is an act in the genus of intelligible things, and therefore it is both intellect and the thing understood. Hence an angel apprehends his own essence through itself: not so

* Possibilis—elsewhere in this translation rendered “passive”—Ed.

the human mind, which is either altogether in potentiality to intelligible things—as is the passive intellect—or is the act of intelligible things abstracted from the phantasms—as is the active intellect.

Reply to Objection 3. This saying of the Philosopher is universally true in every kind of intellect. For as sense in act is the sensible in act, by reason of the sensible likeness which is the form of sense in act, so likewise the intellect in act is the object understood in act, by reason of the likeness of the thing understood, which is the form of the intellect in act. So the human intellect, which becomes actual by the species of the object understood, is itself understood by the same species as by its own form. Now to say that in “things without mat-

ter the intellect and what is understood are the same,” is equal to saying that “as regards things actually understood the intellect and what is understood are the same.” For a thing is actually understood in that it is immaterial. But a distinction must be drawn: since the essences of some things are immaterial—as the separate substances called angels, each of which is understood and understands, whereas there are other things whose essences are not wholly immaterial, but only the abstract likenesses thereof. Hence the Commentator says (*De Anima* iii) that the proposition quoted is true only of separate substances; because in a sense it is verified in their regard, and not in regard of other substances, as already stated (*Reply obj. 2*).

Objection 1. It would seem that our intellect knows the habits of the soul by their essence. For Augustine says (De Trin. xiii, 1): “Faith is not seen in the heart wherein it abides, as the soul of a man may be seen by another from the movement of the body; but we know most certainly that it is there, and conscience proclaims its existence”; and the same principle applies to the other habits of the soul. Therefore the habits of the soul are not known by their acts, but by themselves.

Objection 2. Further, material things outside the soul are known by their likeness being present in the soul, and are said therefore to be known by their likenesses. But the soul’s habits are present by their essence in the soul. Therefore the habits of the soul are known by their essence.

Objection 3. Further, “whatever is the cause of a thing being such is still more so.” But habits and intelligible species cause things to be known by the soul. Therefore they are still more known by the soul in themselves.

On the contrary, Habits like powers are the principles of acts. But as is said (De Anima ii, 4), “acts and operations are logically prior to powers.” Therefore in the same way they are prior to habits; and thus habits, like the powers, are known by their acts.

I answer that, A habit is a kind of medium between mere power and mere act. Now, it has been said (a. 1) that nothing is known but as it is actual: therefore so far as a habit fails in being a perfect act, it falls short in being of itself knowable, and can be known only by its act; thus, for example, anyone knows he has a habit from the fact that he can produce the act proper to that habit; or he may inquire into the nature and idea of the habit by considering the act. The first kind of knowledge of the

habit arises from its being present, for the very fact of its presence causes the act whereby it is known. The second kind of knowledge of the habit arises from a careful inquiry, as is explained above of the mind (a. 1).

Reply to Objection 1. Although faith is not known by external movement of the body, it is perceived by the subject wherein it resides, by the interior act of the heart. For no one knows that he has faith unless he knows that he believes.

Reply to Objection 2. Habits are present in our intellect, not as its object since, in the present state of life, our intellect’s object is the nature of a material thing as stated above (q. 84, a. 7), but as that by which it understands.

Reply to Objection 3. The axiom, “whatever is the cause of a thing being such, is still more so,” is true of things that are of the same order, for instance, of the same kind of cause; for example, we may say that health is desirable on account of life, and therefore life is more desirable still. But if we take things of different orders the axiom is not true: for we may say that health is caused by medicine, but it does not follow that medicine is more desirable than health, for health belongs to the order of final causes, whereas medicine belongs to the order of efficient causes. So of two things belonging essentially to the order of the objects of knowledge, the one which is the cause of the other being known, is the more known, as principles are more known than conclusions. But habit as such does not belong to the order of objects of knowledge; nor are things known on account of the habit, as on account of an object known, but as on account of a disposition or form whereby the subject knows: and therefore the argument does not prove.

Objection 1. It would seem that our intellect does not know its own act. For what is known is the object of the knowing faculty. But the act differs from the object. Therefore the intellect does not know its own act.

Objection 2. Further, whatever is known is known by some act. If, then, the intellect knows its own act, it knows it by some act, and again it knows that act by some other act; this is to proceed indefinitely, which seems impossible.

Objection 3. Further, the intellect has the same relation to its act as sense has to its act. But the proper sense does not feel its own act, for this belongs to the common sense, as stated *De Anima* iii, 2. Therefore neither does the intellect understand its own act.

On the contrary, Augustine says (*De Trin.* x, 11), “I understand that I understand.”

I answer that, As stated above (Aa. 1,2) a thing is intelligible according as it is in act. Now the ultimate perfection of the intellect consists in its own operation: for this is not an act tending to something else in which lies the perfection of the work accomplished, as building is the perfection of the thing built; but it remains in the agent as its perfection and act, as is said *Metaph.* ix, Did. viii, 8. Therefore the first thing understood of the intellect is its own act of understanding. This occurs in different ways with different intellects. For there is an intellect, namely, the Divine, which is Its own act of intelligence, so that in God the understanding of His intelligence, and the understanding of His Essence, are one and the same act, because His Essence is His act of understanding. But there is another intellect, the angelic, which is not its own act of understanding, as we have said above (q. 79, a. 1), and yet the first object of that act is the angelic essence. Wherefore although there is a logical distinction between the act whereby he understands that he understands, and that whereby he understands his essence, yet he understands both by one and the same act; because to understand his own essence is the proper perfection of his essence, and by one and the same act is a thing, together with its perfec-

tion, understood. And there is yet another, namely, the human intellect, which neither is its own act of understanding, nor is its own essence the first object of its act of understanding, for this object is the nature of a material thing. And therefore that which is first known by the human intellect is an object of this kind, and that which is known secondarily is the act by which that object is known; and through the act the intellect itself is known, the perfection of which is this act of understanding. For this reason did the Philosopher assert that objects are known before acts, and acts before powers (*De Anima* ii, 4).

Reply to Objection 1. The object of the intellect is something universal, namely, “being” and “the true,” in which the act also of understanding is comprised. Wherefore the intellect can understand its own act. But not primarily, since the first object of our intellect, in this state of life, is not every being and everything true, but “being” and “true,” as considered in material things, as we have said above (q. 84, a. 7), from which it acquires knowledge of all other things.

Reply to Objection 2. The intelligent act of the human intellect is not the act and perfection of the material nature understood, as if the nature of the material thing and intelligent act could be understood by one act; just as a thing and its perfection are understood by one act. Hence the act whereby the intellect understands a stone is distinct from the act whereby it understands that it understands a stone; and so on. Nor is there any difficulty in the intellect being thus potentially infinite, as explained above (q. 86, a. 2).

Reply to Objection 3. The proper sense feels by reason of the immutation in the material organ caused by the external sensible. A material object, however, cannot immute itself; but one is immuted by another, and therefore the act of the proper sense is perceived by the common sense. The intellect, on the contrary, does not perform the act of understanding by the material immutation of an organ; and so there is no comparison.

Objection 1. It would seem that the intellect does not understand the act of the will. For nothing is known by the intellect, unless it be in some way present in the intellect. But the act of the will is not in the intellect; since the will and the intellect are distinct. Therefore the act of the will is not known by the intellect.

Objection 2. Further, the act is specified by the object. But the object of the will is not the same as the object of the intellect. Therefore the act of the will is specifically distinct from the object of the intellect, and therefore the act of the will is not known by the intellect.

Objection 3. Augustine (Confess. x, 17) says of the soul's affections that "they are known neither by images as bodies are known; nor by their presence, like the arts; but by certain notions." Now it does not seem that there can be in the soul any other notions of things but either the essences of things known or the likenesses thereof. Therefore it seems impossible for the intellect to know such affections of the soul as the acts of the will.

On the contrary, Augustine says (De Trin. x, 11), "I understand that I will."

I answer that, As stated above (q. 59, a. 1), the act of the will is nothing but an inclination consequent on the form understood; just as the natural appetite is an inclination consequent on the natural form. Now the inclination of a thing resides in it according to its mode of existence; and hence the natural inclination resides in a natural thing naturally, and the inclination called the sensible appetite is in the sensible thing sensibly; and likewise the intelligible inclination, which is the act of

the will, is in the intelligent subject intelligibly as in its principle and proper subject. Hence the Philosopher expresses himself thus (De Anima iii, 9)—that "the will is in the reason." Now whatever is intelligibly in an intelligent subject, is understood by that subject. Therefore the act of the will is understood by the intellect, both inasmuch as one knows that one wills; and inasmuch as one knows the nature of this act, and consequently, the nature of its principle which is the habit or power.

Reply to Objection 1. This argument would hold good if the will and the intellect were in different subjects, as they are distinct powers; for then whatever was in the will would not be in the intellect. But as both are rooted in the same substance of the soul, and since one is in a certain way the principle of the other, consequently what is in the will is, in a certain way, also in the intellect.

Reply to Objection 2. The "good" and the "true" which are the objects of the will and of the intellect, differ logically, but one is contained in the other, as we have said above (q. 82, a. 4, ad 1; q. 16, a. 4, ad 1); for the true is good and the good is true. Therefore the objects of the will fall under the intellect, and those of the intellect can fall under the will.

Reply to Objection 3. The affections of the soul are in the intellect not by similitude only, like bodies; nor by being present in their subject, as the arts; but as the thing caused is in its principle, which contains some notion of the thing caused. And so Augustine says that the soul's affections are in the memory by certain notions.

FIRST PART, QUESTION 88

How the Human Soul Knows What Is Above Itself (In Three Articles)

We must now consider how the human soul knows what is above itself, viz. immaterial substances. Under this head there are three points of inquiry:

- (1) Whether the human soul in the present state of life can understand the immaterial substances called angels, in themselves?
- (2) Whether it can arrive at the knowledge thereof by the knowledge of material things?
- (3) Whether God is the first object of our knowledge?

Whether the human soul in the present state of life can understand immaterial substances in themselves?

Ia q. 88 a. 1

Objection 1. It would seem that the human soul in the present state of life can understand immaterial substances in themselves. For Augustine (De Trin. ix, 3) says: "As the mind itself acquires the knowledge of corporeal things by means of the corporeal senses, so it gains from itself the knowledge of incorporeal things." But these are the immaterial substances. Therefore the human mind understands immaterial substances.

Objection 2. Further, like is known by like. But the human mind is more akin to immaterial than to material things; since its own nature is immaterial, as is clear from what we have said above (q. 76, a. 1). Since then our mind understands material things, much more is it able to understand immaterial things.

Objection 3. Further, the fact that objects which are in themselves most sensible are not most felt by us, comes from sense being corrupted by their very excellence. But the intellect is not subject to such a corrupting influence from its object, as is stated De Anima iii, 4. Therefore things which are in themselves in the highest degree of intelligibility, are likewise to us most intelligible. As material things, however, are intelligible only so far as we make them actually so by abstracting them from material conditions, it is clear that those substances are more intelligible in themselves whose nature is immaterial. Therefore they are much more known to us than are material things.

Objection 4. Further, the Commentator says (Metaph. ii) that "nature would be frustrated in its end" were we unable to understand abstract substances, "because it would have made what in itself is naturally intelligible not to be understood at all." But in nature nothing is idle or purposeless. Therefore immaterial substances can be understood by us.

Objection 5. Further, as sense is to the sensible, so is intellect to the intelligible. But our sight can see all things corporeal, whether superior and incorruptible; or lower and corruptible. Therefore our intellect can understand all intelligible substances, even the superior and immaterial.

On the contrary, It is written (Wis. 9:16): "The things that are in heaven, who shall search out?" But

these substances are said to be in heaven, according to Mat. 18:10, "Their angels in heaven," etc. Therefore immaterial substances cannot be known by human investigation.

I answer that, In the opinion of Plato, immaterial substances are not only understood by us, but are the objects we understand first of all. For Plato taught that immaterial subsisting forms, which he called "Ideas," are the proper objects of our intellect, and thus first and "per se" understood by us; and, further, that material objects are known by the soul inasmuch as phantasy and sense are mixed up with the mind. Hence the purer the intellect is, so much the more clearly does it perceive the intelligible truth of immaterial things.

But in Aristotle's opinion, which experience corroborates, our intellect in its present state of life has a natural relationship to the natures of material things; and therefore it can only understand by turning to the phantasms, as we have said above (q. 84, a. 7). Thus it clearly appears that immaterial substances which do not fall under sense and imagination, cannot first and "per se" be known by us, according to the mode of knowledge which experience proves us to have.

Nevertheless Averroes (Comment. De Anima iii) teaches that in this present life man can in the end arrive at the knowledge of separate substances by being coupled or united to some separate substance, which he calls the "active intellect," and which, being a separate substance itself, can naturally understand separate substances. Hence, when it is perfectly united to us so that by its means we are able to understand perfectly, we also shall be able to understand separate substances, as in the present life through the medium of the passive intellect united to us, we can understand material things. Now he said that the active intellect is united to us, thus. For since we understand by means of both the active intellect and intelligible objects, as, for instance, we understand conclusions by principles understood; it is clear that the active intellect must be compared to the objects understood, either as the principal agent is to the instrument, or as form to matter. For an action is ascribed to two principles in one of these two ways;

to a principal agent and to an instrument, as cutting to the workman and the saw; to a form and its subject, as heating to heat and fire. In both these ways the active intellect can be compared to the intelligible object as perfection is to the perfectible, and as act is to potentiality. Now a subject is made perfect and receives its perfection at one and the same time, as the reception of what is actually visible synchronizes with the reception of light in the eye. Therefore the passive intellect receives the intelligible object and the active intellect together; and the more numerous the intelligible objects received, so much the nearer do we come to the point of perfect union between ourselves and the active intellect; so much so that when we understand all the intelligible objects, the active intellect becomes one with us, and by its instrumentality we can understand all things material and immaterial. In this he makes the ultimate happiness of man to consist. Nor, as regards the present inquiry, does it matter whether the passive intellect in that state of happiness understands separate substances by the instrumentality of the active intellect, as he himself maintains, or whether (as he says Alexander holds) the passive intellect can never understand separate substances (because according to him it is corruptible), but man understands separate substances by means of the active intellect.

This opinion, however, is untrue. First, because, supposing the active intellect to be a separate substance, we could not formally understand by its instrumentality, for the medium of an agent's formal action consists in its form and act, since every agent acts according to its actuality, as was said of the passive intellect (q. 70, a. 1). Secondly, this opinion is untrue, because in the above explanation, the active intellect, supposing it to be a separate substance, would not be joined to us in its substance, but only in its light, as participated in things understood; and would not extend to the other acts of the active intellect so as to enable us to understand immaterial substances; just as when we see colors set off by the sun, we are not united to the substance of the sun so as to act like the sun, but its light only is united to us, that we may see the colors. Thirdly, this opinion is untrue, because granted that, as above explained, the active intellect were united to us in substance, still it is not said that it is wholly so united in regard to one intelligible object, or two; but rather in regard to all intelligible objects. But all such objects together do not equal the force of the active intellect, as it is a much greater thing to understand separate substances than to understand all material things. Hence it clearly follows that the knowledge of all material things would not make the active intellect to be so united to us as to enable us by its instrumentality to understand separate substances.

Fourthly, this opinion is untrue, because it is hardly possible for anyone in this world to understand all material things: and thus no one, or very few, could reach to perfect felicity; which is against what the Philosopher says (Ethic. i, 9), that happiness is a "kind of common

good, communicable to all capable of virtue." Further, it is unreasonable that only the few of any species attain to the end of the species.

Fifthly, the Philosopher expressly says (Ethic. i, 10), that happiness is "an operation according to perfect virtue"; and after enumerating many virtues in the tenth book, he concludes (Ethic. i, 7) that ultimate happiness consisting in the knowledge of the highest things intelligible is attained through the virtue of wisdom, which in the sixth chapter he had named as the chief of speculative sciences. Hence Aristotle clearly places the ultimate felicity of man in the knowledge of separate substances, obtainable by speculative science; and not by being united to the active intellect as some imagined.

Sixthly, as was shown above (q. 79, a. 4), the active intellect is not a separate substance; but a faculty of the soul, extending itself actively to the same objects to which the passive intellect extends receptively; because, as is stated (De Anima iii, 5), the passive intellect is "all things potentially," and the active intellect is "all things in act." Therefore both intellects, according to the present state of life, extend to material things only, which are made actually intelligible by the active intellect, and are received in the passive intellect. Hence in the present state of life we cannot understand separate immaterial substances in themselves, either by the passive or by the active intellect.

Reply to Objection 1. Augustine may be taken to mean that the knowledge of incorporeal things in the mind can be gained by the mind itself. This is so true that philosophers also say that the knowledge concerning the soul is a principle for the knowledge of separate substances. For by knowing itself, it attains to some knowledge of incorporeal substances, such as is within its compass; not that the knowledge of itself gives it a perfect and absolute knowledge of them.

Reply to Objection 2. The likeness of nature is not a sufficient cause of knowledge; otherwise what Empedocles said would be true—that the soul needs to have the nature of all in order to know all. But knowledge requires that the likeness of the thing known be in the knower, as a kind of form thereof. Now our passive intellect, in the present state of life, is such that it can be informed with similitudes abstracted from phantasms: and therefore it knows material things rather than immaterial substances.

Reply to Objection 3. There must needs be some proportion between the object and the faculty of knowledge; such as of the active to the passive, and of perfection to the perfectible. Hence that sensible objects of great power are not grasped by the senses, is due not merely to the fact that they corrupt the organ, but also to their being impropportionate to the sensitive power. And thus it is that immaterial substances are impropportionate to our intellect, in our present state of life, so that it cannot understand them.

Reply to Objection 4. This argument of the Commentator fails in several ways. First, because if separate

substances are not understood by us, it does not follow that they are not understood by any intellect; for they are understood by themselves, and by one another.

Secondly, to be understood by us is not the end of separate substances: while only that is vain and purposeless, which fails to attain its end. It does not follow, therefore, that immaterial substances are purposeless, even if they are not understood by us at all.

Reply to Objection 5. Sense knows bodies, whether superior or inferior, in the same way, that is, by the sensible acting on the organ. But we do not understand material and immaterial substances in the same way. The former we understand by a process of abstraction, which is impossible in the case of the latter, for there are no phantasms of what is immaterial.

Whether our intellect can understand immaterial substances through its knowledge of material things?

Ia q. 88 a. 2

Objection 1. It would seem that our intellect can know immaterial substances through the knowledge of material things. For Dionysius says (Coel. Hier. i) that “the human mind cannot be raised up to immaterial contemplation of the heavenly hierarchies, unless it is led thereto by material guidance according to its own nature.” Therefore we can be led by material things to know immaterial substances.

Objection 2. Further, science resides in the intellect. But there are sciences and definitions of immaterial substances; for Damascene defines an angel (De Fide Orth. ii, 3); and we find angels treated of both in theology and philosophy. Therefore immaterial substances can be understood by us.

Objection 3. Further, the human soul belongs to the genus of immaterial substances. But it can be understood by us through its act by which it understands material things. Therefore also other material substances can be understood by us, through their material effects.

Objection 4. Further, the only cause which cannot be comprehended through its effects is that which is infinitely distant from them, and this belongs to God alone. Therefore other created immaterial substances can be understood by us through material things.

On the contrary, Dionysius says (Div. Nom. i) that “intelligible things cannot be understood through sensible things, nor composite things through simple, nor incorporeal through corporeal.”

I answer that, Averroes says (De Anima iii) that a philosopher named Avempace* taught that by the understanding of natural substances we can be led, according to true philosophical principles, to the knowledge of immaterial substances. For since the nature of our intellect is to abstract the quiddity of material things from matter, anything material residing in that abstracted quiddity can again be made subject to abstraction; and as the process of abstraction cannot go on forever, it must arrive at length at some immaterial quiddity, absolutely without matter; and this would be the understanding of immaterial substance.

Now this opinion would be true, were immaterial substances the forms and species of these material things; as the Platonists supposed. But supposing, on the contrary, that immaterial substances differ alto-

gether from the quiddity of material things, it follows that however much our intellect abstract the quiddity of material things from matter, it could never arrive at anything akin to immaterial substance. Therefore we are not able perfectly to understand immaterial substances through material substances.

Reply to Objection 1. From material things we can rise to some kind of knowledge of immaterial things, but not to the perfect knowledge thereof; for there is no proper and adequate proportion between material and immaterial things, and the likenesses drawn from material things for the understanding of immaterial things are very dissimilar therefrom, as Dionysius says (Coel. Hier. ii).

Reply to Objection 2. Science treats of higher things principally by way of negation. Thus Aristotle (De Coel. i, 3) explains the heavenly bodies by denying to them inferior corporeal properties. Hence it follows that much less can immaterial substances be known by us in such a way as to make us know their quiddity; but we may have a scientific knowledge of them by way of negation and by their relation to material things.

Reply to Objection 3. The human soul understands itself through its own act of understanding, which is proper to it, showing perfectly its power and nature. But the power and nature of immaterial substances cannot be perfectly known through such act, nor through any other material thing, because there is no proportion between the latter and the power of the former.

Reply to Objection 4. Created immaterial substances are not in the same natural genus as material substances, for they do not agree in power or in matter; but they belong to the same logical genus, because even immaterial substances are in the predicament of substance, as their essence is distinct from their existence. But God has no connection with material things, as regards either natural genus or logical genus; because God is in no genus, as stated above (q. 3, a. 5). Hence through the likeness derived from material things we can know something positive concerning the angels, according to some common notion, though not according to the specific nature; whereas we cannot acquire any such knowledge at all about God.

* Ibn-Badja, Arabian Philosopher; ob. 1183

Objection 1. It would seem that God is the first object known by the human mind. For that object in which all others are known, and by which we judge others, is the first thing known to us; as light is to the eye, and first principles to the intellect. But we know all things in the light of the first truth, and thereby judge of all things, as Augustine says (*De Trin.* xii, 2; *De Vera Relig.* xxxi;*). Therefore God is the first object known to us.

Objection 2. Further, whatever causes a thing to be such is more so. But God is the cause of all our knowledge; for He is “the true light which enlighteneth every man that cometh into this world” (*Jn.* 1:9). Therefore God is our first and most known object.

Objection 3. Further, what is first known in the image is the exemplar to which it is made. But in our mind is the image of God, as Augustine says (*De Trin.* xii, 4,7). Therefore God is the first object known to our mind.

On the contrary, “No man hath seen God at any time” (*Jn.* 1:18).

I answer that, Since the human intellect in the present state of life cannot understand even immaterial created substances (a. 1), much less can it understand the essence of the uncreated substance. Hence it must be said simply that God is not the first object of our knowledge. Rather do we know God through creatures, according to the Apostle (*Rom.* 1:20), “the in-

visible things of God are clearly seen, being understood by the things that are made”: while the first object of our knowledge in this life is the “quiddity of a material thing,” which is the proper object of our intellect, as appears above in many passages (q. 84, a. 7; q. 85, a. 8; q. 87, a. 2, ad 2)

Reply to Objection 1. We see and judge of all things in the light of the first truth, forasmuch as the light itself of our mind, whether natural or gratuitous, is nothing else than the impression of the first truth upon it, as stated above (q. 12, a. 2). Hence, as the light itself of our intellect is not the object it understands, much less can it be said that God is the first object known by our intellect.

Reply to Objection 2. The axiom, “Whatever causes a thing to be such is more so,” must be understood of things belonging to one and the same order, as explained above (q. 81, a. 2, ad 3). Other things than God are known because of God; not as if He were the first known object, but because He is the first cause of our faculty of knowledge.

Reply to Objection 3. If there existed in our souls a perfect image of God, as the Son is the perfect image of the Father, our mind would know God at once. But the image in our mind is imperfect; hence the argument does not prove.

* *Confess.* xii, 25

Objection 1. It would seem that the human soul in the present state of life can understand immaterial substances in themselves. For Augustine (*De Trin.* ix, 3) says: “As the mind itself acquires the knowledge of corporeal things by means of the corporeal senses, so it gains from itself the knowledge of incorporeal things.” But these are the immaterial substances. Therefore the human mind understands immaterial substances.

Objection 2. Further, like is known by like. But the human mind is more akin to immaterial than to material things; since its own nature is immaterial, as is clear from what we have said above (q. 76, a. 1). Since then our mind understands material things, much more is it able to understand immaterial things.

Objection 3. Further, the fact that objects which are in themselves most sensible are not most felt by us, comes from sense being corrupted by their very excellence. But the intellect is not subject to such a corrupting influence from its object, as is stated *De Anima* iii, 4. Therefore things which are in themselves in the highest degree of intelligibility, are likewise to us most intelligible. As material things, however, are intelligible only so far as we make them actually so by abstracting them from material conditions, it is clear that those substances are more intelligible in themselves whose nature is immaterial. Therefore they are much more known to us than are material things.

Objection 4. Further, the Commentator says (*Metaph.* ii) that “nature would be frustrated in its end” were we unable to understand abstract substances, “because it would have made what in itself is naturally intelligible not to be understood at all.” But in nature nothing is idle or purposeless. Therefore immaterial substances can be understood by us.

Objection 5. Further, as sense is to the sensible, so is intellect to the intelligible. But our sight can see all things corporeal, whether superior and incorruptible; or lower and corruptible. Therefore our intellect can understand all intelligible substances, even the superior and immaterial.

On the contrary, It is written (*Wis.* 9:16): “The things that are in heaven, who shall search out?” But these substances are said to be in heaven, according to *Mat.* 18:10, “Their angels in heaven,” etc. Therefore immaterial substances cannot be known by human investigation.

I answer that, In the opinion of Plato, immaterial substances are not only understood by us, but are the objects we understand first of all. For Plato taught that immaterial subsisting forms, which he called “Ideas,” are the proper objects of our intellect, and thus first and “per se” understood by us; and, further, that material objects are known by the soul inasmuch as phantasy and sense are mixed up with the mind. Hence the purer the intellect is, so much the more clearly does it perceive

the intelligible truth of immaterial things.

But in Aristotle’s opinion, which experience corroborates, our intellect in its present state of life has a natural relationship to the natures of material things; and therefore it can only understand by turning to the phantasms, as we have said above (q. 84, a. 7). Thus it clearly appears that immaterial substances which do not fall under sense and imagination, cannot first and “per se” be known by us, according to the mode of knowledge which experience proves us to have.

Nevertheless Averroes (*Comment. De Anima* iii) teaches that in this present life man can in the end arrive at the knowledge of separate substances by being coupled or united to some separate substance, which he calls the “active intellect,” and which, being a separate substance itself, can naturally understand separate substances. Hence, when it is perfectly united to us so that by its means we are able to understand perfectly, we also shall be able to understand separate substances, as in the present life through the medium of the passive intellect united to us, we can understand material things. Now he said that the active intellect is united to us, thus. For since we understand by means of both the active intellect and intelligible objects, as, for instance, we understand conclusions by principles understood; it is clear that the active intellect must be compared to the objects understood, either as the principal agent is to the instrument, or as form to matter. For an action is ascribed to two principles in one of these two ways; to a principal agent and to an instrument, as cutting to the workman and the saw; to a form and its subject, as heating to heat and fire. In both these ways the active intellect can be compared to the intelligible object as perfection is to the perfectible, and as act is to potentiality. Now a subject is made perfect and receives its perfection at one and the same time, as the reception of what is actually visible synchronizes with the reception of light in the eye. Therefore the passive intellect receives the intelligible object and the active intellect together; and the more numerous the intelligible objects received, so much the nearer do we come to the point of perfect union between ourselves and the active intellect; so much so that when we understand all the intelligible objects, the active intellect becomes one with us, and by its instrumentality we can understand all things material and immaterial. In this he makes the ultimate happiness of man to consist. Nor, as regards the present inquiry, does it matter whether the passive intellect in that state of happiness understands separate substances by the instrumentality of the active intellect, as he himself maintains, or whether (as he says Alexander holds) the passive intellect can never understand separate substances (because according to him it is corruptible), but man understands separate substances by means of the active intellect.

This opinion, however, is untrue. First, because, supposing the active intellect to be a separate substance, we could not formally understand by its instrumentality, for the medium of an agent's formal action consists in its form and act, since every agent acts according to its actuality, as was said of the passive intellect (q. 70, a. 1). Secondly, this opinion is untrue, because in the above explanation, the active intellect, supposing it to be a separate substance, would not be joined to us in its substance, but only in its light, as participated in things understood; and would not extend to the other acts of the active intellect so as to enable us to understand immaterial substances; just as when we see colors set off by the sun, we are not united to the substance of the sun so as to act like the sun, but its light only is united to us, that we may see the colors. Thirdly, this opinion is untrue, because granted that, as above explained, the active intellect were united to us in substance, still it is not said that it is wholly so united in regard to one intelligible object, or two; but rather in regard to all intelligible objects. But all such objects together do not equal the force of the active intellect, as it is a much greater thing to understand separate substances than to understand all material things. Hence it clearly follows that the knowledge of all material things would not make the active intellect to be so united to us as to enable us by its instrumentality to understand separate substances.

Fourthly, this opinion is untrue, because it is hardly possible for anyone in this world to understand all material things: and thus no one, or very few, could reach to perfect felicity; which is against what the Philosopher says (Ethic. i, 9), that happiness is a "kind of common good, communicable to all capable of virtue." Further, it is unreasonable that only the few of any species attain to the end of the species.

Fifthly, the Philosopher expressly says (Ethic. i, 10), that happiness is "an operation according to perfect virtue"; and after enumerating many virtues in the tenth book, he concludes (Ethic. i, 7) that ultimate happiness consisting in the knowledge of the highest things intelligible is attained through the virtue of wisdom, which in the sixth chapter he had named as the chief of speculative sciences. Hence Aristotle clearly places the ultimate felicity of man in the knowledge of separate substances, obtainable by speculative science; and not by being united to the active intellect as some imagined.

Sixthly, as was shown above (q. 79, a. 4), the active intellect is not a separate substance; but a faculty of the soul, extending itself actively to the same objects to which the passive intellect extends receptively; because, as is stated (De Anima iii, 5), the passive intellect is "all things potentially," and the active intellect is "all things in act." Therefore both intellects, according to

the present state of life, extend to material things only, which are made actually intelligible by the active intellect, and are received in the passive intellect. Hence in the present state of life we cannot understand separate immaterial substances in themselves, either by the passive or by the active intellect.

Reply to Objection 1. Augustine may be taken to mean that the knowledge of incorporeal things in the mind can be gained by the mind itself. This is so true that philosophers also say that the knowledge concerning the soul is a principle for the knowledge of separate substances. For by knowing itself, it attains to some knowledge of incorporeal substances, such as is within its compass; not that the knowledge of itself gives it a perfect and absolute knowledge of them.

Reply to Objection 2. The likeness of nature is not a sufficient cause of knowledge; otherwise what Empedocles said would be true—that the soul needs to have the nature of all in order to know all. But knowledge requires that the likeness of the thing known be in the knower, as a kind of form thereof. Now our passive intellect, in the present state of life, is such that it can be informed with similitudes abstracted from phantasms: and therefore it knows material things rather than immaterial substances.

Reply to Objection 3. There must needs be some proportion between the object and the faculty of knowledge; such as of the active to the passive, and of perfection to the perfectible. Hence that sensible objects of great power are not grasped by the senses, is due not merely to the fact that they corrupt the organ, but also to their being impropportionate to the sensitive power. And thus it is that immaterial substances are impropportionate to our intellect, in our present state of life, so that it cannot understand them.

Reply to Objection 4. This argument of the Commentator fails in several ways. First, because if separate substances are not understood by us, it does not follow that they are not understood by any intellect; for they are understood by themselves, and by one another.

Secondly, to be understood by us is not the end of separate substances: while only that is vain and purposeless, which fails to attain its end. It does not follow, therefore, that immaterial substances are purposeless, even if they are not understood by us at all.

Reply to Objection 5. Sense knows bodies, whether superior or inferior, in the same way, that is, by the sensible acting on the organ. But we do not understand material and immaterial substances in the same way. The former we understand by a process of abstraction, which is impossible in the case of the latter, for there are no phantasms of what is immaterial.

Objection 1. It would seem that our intellect can know immaterial substances through the knowledge of material things. For Dionysius says (Coel. Hier. i) that “the human mind cannot be raised up to immaterial contemplation of the heavenly hierarchies, unless it is led thereto by material guidance according to its own nature.” Therefore we can be led by material things to know immaterial substances.

Objection 2. Further, science resides in the intellect. But there are sciences and definitions of immaterial substances; for Damascene defines an angel (De Fide Orth. ii, 3); and we find angels treated of both in theology and philosophy. Therefore immaterial substances can be understood by us.

Objection 3. Further, the human soul belongs to the genus of immaterial substances. But it can be understood by us through its act by which it understands material things. Therefore also other material substances can be understood by us, through their material effects.

Objection 4. Further, the only cause which cannot be comprehended through its effects is that which is infinitely distant from them, and this belongs to God alone. Therefore other created immaterial substances can be understood by us through material things.

On the contrary, Dionysius says (Div. Nom. i) that “intelligible things cannot be understood through sensible things, nor composite things through simple, nor incorporeal through corporeal.”

I answer that, Averroes says (De Anima iii) that a philosopher named Avempace* taught that by the understanding of natural substances we can be led, according to true philosophical principles, to the knowledge of immaterial substances. For since the nature of our intellect is to abstract the quiddity of material things from matter, anything material residing in that abstracted quiddity can again be made subject to abstraction; and as the process of abstraction cannot go on forever, it must arrive at length at some immaterial quiddity, absolutely without matter; and this would be the understanding of immaterial substance.

Now this opinion would be true, were immaterial substances the forms and species of these material things; as the Platonists supposed. But supposing, on the contrary, that immaterial substances differ alto-

gether from the quiddity of material things, it follows that however much our intellect abstract the quiddity of material things from matter, it could never arrive at anything akin to immaterial substance. Therefore we are not able perfectly to understand immaterial substances through material substances.

Reply to Objection 1. From material things we can rise to some kind of knowledge of immaterial things, but not to the perfect knowledge thereof; for there is no proper and adequate proportion between material and immaterial things, and the likenesses drawn from material things for the understanding of immaterial things are very dissimilar therefrom, as Dionysius says (Coel. Hier. ii).

Reply to Objection 2. Science treats of higher things principally by way of negation. Thus Aristotle (De Coel. i, 3) explains the heavenly bodies by denying to them inferior corporeal properties. Hence it follows that much less can immaterial substances be known by us in such a way as to make us know their quiddity; but we may have a scientific knowledge of them by way of negation and by their relation to material things.

Reply to Objection 3. The human soul understands itself through its own act of understanding, which is proper to it, showing perfectly its power and nature. But the power and nature of immaterial substances cannot be perfectly known through such act, nor through any other material thing, because there is no proportion between the latter and the power of the former.

Reply to Objection 4. Created immaterial substances are not in the same natural genus as material substances, for they do not agree in power or in matter; but they belong to the same logical genus, because even immaterial substances are in the predicament of substance, as their essence is distinct from their existence. But God has no connection with material things, as regards either natural genus or logical genus; because God is in no genus, as stated above (q. 3, a. 5). Hence through the likeness derived from material things we can know something positive concerning the angels, according to some common notion, though not according to the specific nature; whereas we cannot acquire any such knowledge at all about God.

* Ibn-Badja, Arabian Philosopher; ob. 1183

Objection 1. It would seem that God is the first object known by the human mind. For that object in which all others are known, and by which we judge others, is the first thing known to us; as light is to the eye, and first principles to the intellect. But we know all things in the light of the first truth, and thereby judge of all things, as Augustine says (*De Trin.* xii, 2; *De Vera Relig.* xxxi;*). Therefore God is the first object known to us.

Objection 2. Further, whatever causes a thing to be such is more so. But God is the cause of all our knowledge; for He is “the true light which enlighteneth every man that cometh into this world” (*Jn.* 1:9). Therefore God is our first and most known object.

Objection 3. Further, what is first known in the image is the exemplar to which it is made. But in our mind is the image of God, as Augustine says (*De Trin.* xii, 4,7). Therefore God is the first object known to our mind.

On the contrary, “No man hath seen God at any time” (*Jn.* 1:18).

I answer that, Since the human intellect in the present state of life cannot understand even immaterial created substances (a. 1), much less can it understand the essence of the uncreated substance. Hence it must be said simply that God is not the first object of our knowledge. Rather do we know God through creatures, according to the Apostle (*Rom.* 1:20), “the in-

visible things of God are clearly seen, being understood by the things that are made”: while the first object of our knowledge in this life is the “quiddity of a material thing,” which is the proper object of our intellect, as appears above in many passages (q. 84, a. 7; q. 85, a. 8; q. 87, a. 2, ad 2)

Reply to Objection 1. Reply to Objection 3. If there existed in our souls a perfect image of God, as the Son is the perfect image of the Father, our mind would know God at once. But the image in our mind is imperfect; hence the argument does not prove.

* *Confess.* xii, 25

FIRST PART, QUESTION 89
Of the Knowledge of the Separated Soul
(In Eight Articles)

We must now consider the knowledge of the separated soul. Under this head there are eight points of inquiry:

- (1) Whether the soul separated from the body can understand?
- (2) Whether it understands separate substances?
- (3) Whether it understands all natural things?
- (4) Whether it understands individuals and singulars?
- (5) Whether the habits of knowledge acquired in this life remain?
- (6) Whether the soul can use the habit of knowledge here acquired?
- (7) Whether local distance impedes the separated soul's knowledge?
- (8) Whether souls separated from the body know what happens here?

Whether the separated soul can understand anything?

Ia q. 89 a. 1

Objection 1. It would seem that the soul separated from the body can understand nothing at all. For the Philosopher says (*De Anima* i, 4) that "the understanding is corrupted together with its interior principle." But by death all human interior principles are corrupted. Therefore also the intellect itself is corrupted.

Objection 2. Further, the human soul is hindered from understanding when the senses are tied, and by a distracted imagination, as explained above (q. 84, Aa. 7,8). But death destroys the senses and imagination, as we have shown above (q. 77, a. 8). Therefore after death the soul understands nothing.

Objection 3. Further, if the separated soul can understand, this must be by means of some species. But it does not understand by means of innate species, because it has none such; being at first "like a tablet on which nothing is written": nor does it understand by species abstracted from things, for it does not then possess organs of sense and imagination which are necessary for the abstraction of species: nor does it understand by means of species, formerly abstracted and retained in the soul; for if that were so, a child's soul would have no means of understanding at all: nor does it understand by means of intelligible species divinely infused, for such knowledge would not be natural, such as we treat of now, but the effect of grace. Therefore the soul apart from the body understands nothing.

On the contrary, The Philosopher says (*De Anima* i, 1), "If the soul had no proper operation, it could not be separated from the body." But the soul is separated from the body; therefore it has a proper operation and above all, that which consists in intelligence. Therefore the soul can understand when it is apart from the body.

I answer that, The difficulty in solving this question arises from the fact that the soul united to the body can understand only by turning to the phantasms, as experience shows. Did this not proceed from the soul's very nature, but accidentally through its being bound up with the body, as the Platonists said, the difficulty would vanish; for in that case when the body was once

removed, the soul would at once return to its own nature, and would understand intelligible things simply, without turning to the phantasms, as is exemplified in the case of other separate substances. In that case, however, the union of soul and body would not be for the soul's good, for evidently it would understand worse in the body than out of it; but for the good of the body, which would be unreasonable, since matter exists on account of the form, and not the form for the sake of matter. But if we admit that the nature of the soul requires it to understand by turning to the phantasms, it will seem, since death does not change its nature, that it can then naturally understand nothing; as the phantasms are wanting to which it may turn.

To solve this difficulty we must consider that as nothing acts except so far as it is actual, the mode of action in every agent follows from its mode of existence. Now the soul has one mode of being when in the body, and another when apart from it, its nature remaining always the same; but this does not mean that its union with the body is an accidental thing, for, on the contrary, such union belongs to its very nature, just as the nature of a light object is not changed, when it is in its proper place, which is natural to it, and outside its proper place, which is beside its nature. The soul, therefore, when united to the body, consistently with that mode of existence, has a mode of understanding, by turning to corporeal phantasms, which are in corporeal organs; but when it is separated from the body, it has a mode of understanding, by turning to simply intelligible objects, as is proper to other separate substances. Hence it is as natural for the soul to understand by turning to the phantasms as it is for it to be joined to the body; but to be separated from the body is not in accordance with its nature, and likewise to understand without turning to the phantasms is not natural to it; and hence it is united to the body in order that it may have an existence and an operation suitable to its nature. But here again a difficulty arises. For since nature is always ordered to what is best, and since it is better to understand by turning to

simply intelligible objects than by turning to the phantasms; God should have ordered the soul's nature so that the nobler way of understanding would have been natural to it, and it would not have needed the body for that purpose.

In order to resolve this difficulty we must consider that while it is true that it is nobler in itself to understand by turning to something higher than to understand by turning to phantasms, nevertheless such a mode of understanding was not so perfect as regards what was possible to the soul. This will appear if we consider that every intellectual substance possesses intellectual power by the influence of the Divine light, which is one and simple in its first principle, and the farther off intellectual creatures are from the first principle so much the more is the light divided and diversified, as is the case with lines radiating from the centre of a circle. Hence it is that God by His one Essence understands all things; while the superior intellectual substances understand by means of a number of species, which nevertheless are fewer and more universal and bestow a deeper comprehension of things, because of the efficaciousness of the intellectual power of such natures: whereas the inferior intellectual natures possess a greater number of species, which are less universal, and bestow a lower degree of comprehension, in proportion as they recede from the intellectual power of the higher natures. If, therefore, the inferior substances received species in the same degree of universality as the superior substances, since they are not so strong in understanding, the knowledge which they would derive through them would be imperfect, and of a general and confused nature. We can see this to a certain extent in man, for those who are of weaker intellect fail to acquire perfect knowledge through the universal conceptions of those who have a better understanding, unless things are explained to them singly and in detail. Now it is clear that in the natural order human souls hold the lowest place among in-

tellectual substances. But the perfection of the universe required various grades of being. If, therefore, God had willed souls to understand in the same way as separate substances, it would follow that human knowledge, so far from being perfect, would be confused and general. Therefore to make it possible for human souls to possess perfect and proper knowledge, they were so made that their nature required them to be joined to bodies, and thus to receive the proper and adequate knowledge of sensible things from the sensible things themselves; thus we see in the case of uneducated men that they have to be taught by sensible examples.

It is clear then that it was for the soul's good that it was united to a body, and that it understands by turning to the phantasms. Nevertheless it is possible for it to exist apart from the body, and also to understand in another way.

Reply to Objection 1. The Philosopher's words carefully examined will show that he said this on the previous supposition that understanding is a movement of body and soul as united, just as sensation is, for he had not as yet explained the difference between intellect and sense. We may also say that he is referring to the way of understanding by turning to phantasms. This is also the meaning of the second objection.

Reply to Objection 3. The separated soul does not understand by way of innate species, nor by species abstracted then, nor only by species retained, and this the objection proves; but the soul in that state understands by means of participated species arising from the influence of the Divine light, shared by the soul as by other separate substances; though in a lesser degree. Hence as soon as it ceases to act by turning to corporeal (phantasms), the soul turns at once to the superior things; nor is this way of knowledge unnatural, for God is the author of the influx of both of the light of grace and of the light of nature.

Whether the separated soul understands separate substances?

Ia q. 89 a. 2

Objection 1. It would seem that the separated soul does not understand separate substances. For the soul is more perfect when joined to the body than when existing apart from it, being an essential part of human nature; and every part of a whole is more perfect when it exists in that whole. But the soul in the body does not understand separate substances as shown above (q. 88, a. 1). Therefore much less is it able to do so when apart from the body.

Objection 2. Further, whatever is known is known either by its presence or by its species. But separate substances cannot be known to the soul by their presence, for God alone can enter into the soul; nor by means of species abstracted by the soul from an angel, for an angel is more simple than a soul. Therefore the separated soul cannot at all understand separate substances.

Objection 3. Further, some philosophers said that the ultimate happiness of man consists in the knowledge of separate substances. If, therefore, the separated soul can understand separate substances, its happiness would be secured by its separation alone; which cannot be reasonably be said.

On the contrary, Souls apart from the body know other separated souls; as we see in the case of the rich man in hell, who saw Lazarus and Abraham (Lk. 16:23). Therefore separated souls see the devils and the angels.

I answer that, Augustine says (De Trin. ix, 3), "our mind acquires the knowledge of incorporeal things by itself"—i.e. by knowing itself (q. 88, a. 1, ad 1). Therefore from the knowledge which the separated soul has of itself, we can judge how it knows other separate things.

Now it was said above (a. 1), that as long as it is united to the body the soul understands by turning to phantasms, and therefore it does not understand itself save through becoming actually intelligent by means of ideas abstracted from phantasms; for thus it understands itself through its own act, as shown above (q. 87, a. 1). When, however, it is separated from the body, it understands no longer by turning to phantasms, but by turning to simply intelligible objects; hence in that state it understands itself through itself. Now, every separate substance “understands what is above itself and what is below itself, according to the mode of its substance” (De Causis viii): for a thing is understood according as it is in the one who understands; while one thing is in another according to the nature of that in which it is. And the mode of existence of a separated soul is inferior to that of an angel, but is the same as that of other separated souls. Therefore the soul apart from the body has perfect knowledge of other separated souls, but it has an imperfect and defective knowledge of the angels so far as its natural knowledge is concerned. But the

knowledge of glory is otherwise.

Reply to Objection 1. The separated soul is, indeed, less perfect considering its nature in which it communicates with the nature of the body: but it has a greater freedom of intelligence, since the weight and care of the body is a clog upon the clearness of its intelligence in the present life.

Reply to Objection 2. The separated soul understands the angels by means of divinely impressed ideas; which, however, fail to give perfect knowledge of them, forasmuch as the nature of the soul is inferior to that of an angel.

Reply to Objection 3. Man’s ultimate happiness consists not in the knowledge of any separate substances; but in the knowledge of God, Who is seen only by grace. The knowledge of other separate substances if perfectly understood gives great happiness—not final and ultimate happiness. But the separated soul does not understand them perfectly, as was shown above in this article.

Whether the separated soul knows all natural things?

Ia q. 89 a. 3

Objection 1. It would seem that the separated soul knows all natural things. For the types of all natural things exist in separate substances. Therefore, as separated souls know separate substances, they also know all natural things.

Objection 2. Further, whoever understands the greater intelligible, will be able much more to understand the lesser intelligible. But the separated soul understands immaterial substances, which are in the highest degree of intelligibility. Therefore much more can it understand all natural things which are in a lower degree of intelligibility.

On the contrary, The devils have greater natural knowledge than the separated soul; yet they do not know all natural things, but have to learn many things by long experience, as Isidore says (De Summo Bono i). Therefore neither can the separated soul know all natural things.

I answer that, As stated above (a. 1), the separated soul, like the angels, understands by means of species, received from the influence of the Divine light. Nevertheless, as the soul by nature is inferior to an angel, to whom this kind of knowledge is natural, the soul apart from the body through such species does not receive perfect knowledge, but only a general and confused kind of knowledge. Separated souls, therefore, have the same relation through such species to imperfect and confused knowledge of natural things as the an-

gels have to the perfect knowledge thereof. Now angels through such species know all natural things perfectly; because all that God has produced in the respective natures of natural things has been produced by Him in the angelic intelligence, as Augustine says (Gen. ad lit. ii, 8). Hence it follows that separated souls know all natural things not with a certain and proper knowledge, but in a general and confused manner.

Reply to Objection 1. Even an angel does not understand all natural things through his substance, but through certain species, as stated above (q. 87, a. 1). So it does not follow that the soul knows all natural things because it knows separate substances after a fashion.

Reply to Objection 2. As the soul separated from the body does not perfectly understand separate substances, so neither does it know all natural things perfectly; but it knows them confusedly, as above explained in this article.

Reply to Objection 3. Isidore speaks of the knowledge of the future which neither angels, nor demons, nor separated souls, know except so far as future things pre-exist in their causes or are known by Divine revelation. But we are here treating of the knowledge of natural things.

Reply to Objection 4. Knowledge acquired here by study is proper and perfect; the knowledge of which we speak is confused. Hence it does not follow that to study in order to learn is useless.

Objection 1. It would seem that the separated soul does not know singulars. For no cognitive power besides the intellect remains in the separated soul, as is clear from what has been said above (q. 77, a. 8). But the intellect cannot know singulars, as we have shown (q. 86, a. 1). Therefore the separated soul cannot know singulars.

Objection 2. Further, the knowledge of the singular is more determinate than knowledge of the universal. But the separated soul has no determinate knowledge of the species of natural things, therefore much less can it know singulars.

Objection 3. Further, if it knew the singulars, yet not by sense, for the same reason it would know all singulars. But it does not know all singulars. Therefore it knows none.

On the contrary, The rich man in hell said: "I have five brethren" (Lk. 16:28).

I answer that, Separated souls know some singulars, but not all, not even all present singulars. To understand this, we must consider that there is a twofold way of knowing things, one by means of abstraction from phantasms, and in this way singulars cannot be directly known by the intellect, but only indirectly, as stated above (q. 86, a. 1). The other way of understanding is by the infusion of species by God, and in that way it is possible for the intellect to know singulars. For as God knows all things, universal and singular, by His

Essence, as the cause of universal and individual principles (q. 14, a. 2), so likewise separate substances can know singulars by species which are a kind of participated similitude of the Divine Essence. There is a difference, however, between angels and separated souls in the fact that through these species the angels have a perfect and proper knowledge of things; whereas separated have only a confused knowledge. Hence the angels, by reason of their perfect intellect, through these species, know not only the specific natures of things, but also the singulars contained in those species; whereas separated souls by these species know only those singulars to which they are determined by former knowledge in this life, or by some affection, or by natural aptitude, or by the disposition of the Divine order; because whatever is received into anything is conditioned according to the mode of the recipient.

Reply to Objection 1. The intellect does not know the singular by way of abstraction; neither does the separated soul know it thus; but as explained above.

Reply to Objection 2. The knowledge of the separated soul is confined to those species or individuals to which the soul has some kind of determinate relation, as we have said.

Reply to Objection 3. The separated soul has not the same relation to all singulars, but one relation to some, and another to others. Therefore there is not the same reason why it should know all singulars.

Objection 1. It would seem that the habit of knowledge acquired in this life does not remain in the soul separated from the body: for the Apostle says: "Knowledge shall be destroyed" (1 Cor. 13:8).

Objection 2. Further, some in this world who are less good enjoy knowledge denied to others who are better. If, therefore, the habit of knowledge remained in the soul after death, it would follow that some who are less good would, even in the future life, excel some who are better; which seems unreasonable.

Objection 3. Further, separated souls will possess knowledge by influence of the Divine light. Supposing, therefore, that knowledge here acquired remained in the separated soul, it would follow that two forms of the same species would co-exist in the same subject which cannot be.

Objection 4. Further, the Philosopher says (Praedic. vi, 4,5), that "a habit is a quality hard to remove: yet sometimes knowledge is destroyed by sickness or the like." But in this life there is no change so thorough as death. Therefore it seems that the habit of knowledge is destroyed by death.

On the contrary, Jerome says (Ep. liii, ad Paulinum), "Let us learn on earth that kind of knowl-

edge which will remain with us in heaven."

I answer that, Some say that the habit of knowledge resides not in the intellect itself, but in the sensitive powers, namely, the imaginative, cogitative, and memorative, and that the intelligible species are not kept in the passive intellect. If this were true, it would follow that when the body is destroyed by death, knowledge here acquired would also be entirely destroyed.

But, since knowledge resides in the intellect, which is "the abode of species," as the Philosopher says (De Anima iii, 4), the habit of knowledge here acquired must be partly in the aforesaid sensitive powers and partly in the intellect. This can be seen by considering the very actions from which knowledge arises. For "habits are like the actions whereby they are acquired" (Ethic. ii, 1). Now the actions of the intellect, by which knowledge is here acquired, are performed by the mind turning to the phantasms in the aforesaid sensitive powers. Hence through such acts the passive intellect acquires a certain facility in considering the species received: and the aforesaid sensitive powers acquire a certain aptitude in seconding the action of the intellect when it turns to them to consider the intelligible object. But as the intellectual act resides chiefly and formally

in the intellect itself, whilst it resides materially and dispositively in the inferior powers, the same distinction is to be applied to habit.

Knowledge, therefore, acquired in the present life does not remain in the separated soul, as regards what belongs to the sensitive powers; but as regards what belongs to the intellect itself, it must remain; because, as the Philosopher says (*De Long. et Brev. Vitae* ii), a form may be corrupted in two ways; first, directly, when corrupted by its contrary, as heat, by cold; and secondly, indirectly, when its subject is corrupted. Now it is evident that human knowledge is not corrupted through corruption of the subject, for the intellect is an incorruptible faculty, as above stated (q. 79, a. 2, ad 2). Neither can the intelligible species in the passive intellect be corrupted by their contrary; for there is no contrary to intelligible “intentions,” above all as regards simple intelligence of “what a thing is.” But contrariety may exist in the intellect as regards mental composition and division, or also reasoning; so far as what is false in statement or argument is contrary to truth. And thus knowledge may be corrupted by its contrary when a false argument seduces anyone from the knowledge of truth. For this reason the Philosopher in the above

work mentions two ways in which knowledge is corrupted directly: namely, “forgetfulness” on the part of the memorative power, and “deception” on the part of a false argument. But these have no place in the separated soul. Therefore we must conclude that the habit of knowledge, so far as it is in the intellect, remains in the separated soul.

Reply to Objection 1. The Apostle is not speaking of knowledge as a habit, but as to the act of knowing; and hence he says, in proof of the assertion quoted, “Now, I know in part.”

Reply to Objection 2. As a less good man may exceed a better man in bodily stature, so the same kind of man may have a habit of knowledge in the future life which a better man may not have. Such knowledge, however, cannot be compared with the other prerogatives enjoyed by the better man.

Reply to Objection 3. These two kinds of knowledge are not of the same species, so there is no impossibility.

Reply to Objection 4. This objection considers the corruption of knowledge on the part of the sensitive powers.

Whether the act of knowledge acquired here remains in the separated soul?

Ia q. 89 a. 6

Objection 1. It would seem that the act of knowledge here acquired does not remain in the separated soul. For the Philosopher says (*De Anima* i, 4), that when the body is corrupted, “the soul neither remembers nor loves.” But to consider what is previously known is an act of memory. Therefore the separated soul cannot retain an act of knowledge here acquired.

Objection 2. Further, intelligible species cannot have greater power in the separated soul than they have in the soul united to the body. But in this life we cannot understand by intelligible species without turning to phantasms, as shown above (q. 84, a. 7). Therefore the separated soul cannot do so, and thus it cannot understand at all by intelligible species acquired in this life.

Objection 3. Further, the Philosopher says (*Ethic.* ii, 1), that “habits produce acts similar to those whereby they are acquired.” But the habit of knowledge is acquired here by acts of the intellect turning to phantasms: therefore it cannot produce any other acts. These acts, however, are not adapted to the separated soul. Therefore the soul in the state of separation cannot produce any act of knowledge acquired in this life.

On the contrary, It was said to Dives in hell (*Lk.* 16:25): “Remember thou didst receive good things in thy lifetime.”

I answer that, Action offers two things for our consideration—its species and its mode. Its species comes from the object, whereto the faculty of knowl-

edge is directed by the (intelligible) species, which is the object’s similitude; whereas the mode is gathered from the power of the agent. Thus that a person see a stone is due to the species of the stone in his eye; but that he see it clearly, is due to the eye’s visual power. Therefore as the intelligible species remain in the separated soul, as stated above (a. 5), and since the state of the separated soul is not the same as it is in this life, it follows that through the intelligible species acquired in this life the soul apart from the body can understand what it understood formerly, but in a different way; not by turning to phantasms, but by a mode suited to a soul existing apart from the body. Thus the act of knowledge here acquired remains in the separated soul, but in a different way.

Reply to Objection 1. The Philosopher speaks of remembrance, according as memory belongs to the sensitive part, but not as belonging in a way to the intellect, as explained above (q. 79, a. 6).

Reply to Objection 2. The different mode of intelligence is produced by the different state of the intelligible soul; not by diversity of species.

Reply to Objection 3. The acts which produce a habit are like the acts caused by that habit, in species, but not in mode. For example, to do just things, but not justly, that is, pleasurably, causes the habit of political justice, whereby we act pleasurably. (Cf. *Aristotle, Ethic.* v, 8; *Magn. Moral.* i, 34).

Objection 1. It would seem that local distance impedes the separated soul's knowledge. For Augustine says (*De Cura pro Mort.* xiii), that "the souls of the dead are where they cannot know what is done here." But they know what is done among themselves. Therefore local distance impedes the knowledge in the separated soul.

Objection 2. Further, Augustine says (*De Divin. Daemon.* iii), that "the demon's rapidity of movement enables them to tell things unknown to us." But agility of movement would be useless in that respect unless their knowledge was impeded by local distance; which, therefore, is a much greater hindrance to the knowledge of the separated soul, whose nature is inferior to the demon's.

Objection 3. Further, as there is distance of place, so is there distance of time. But distance of time impedes knowledge in the separated soul, for the soul is ignorant of the future. Therefore it seems that distance of place also impedes its knowledge.

On the contrary, It is written (*Lk.* 16:23), that Dives, "lifting up his eyes when he was in torment, saw Abraham afar off." Therefore local distance does not impede knowledge in the separated soul.

I answer that, Some have held that the separated soul knows the singular by abstraction from the sensible. If that were so, it might be that local distance would impede its knowledge; for either the sensible would

need to act upon the soul, or the soul upon the sensible, and in either case a determinate distance would be necessary. This is, however, impossible because abstraction of the species from the sensible is done through the senses and other sensible faculties which do not remain actually in the soul apart from the body. But the soul when separated understands singulars by species derived from the Divine light, which is indifferent to what is near or distant. Hence knowledge in the separated soul is not hindered by local distance.

Reply to Objection 1. Augustine says that the souls of the departed cannot see what is done here, not because they are 'there,' as if impeded by local distance; but for some other cause, as we shall explain (a. 8).

Reply to Objection 2. Augustine speaks there in accordance with the opinion that demons have bodies naturally united to them, and so have sensitive powers, which require local distance. In the same book he expressly sets down this opinion, though apparently rather by way of narration than of assertion, as we may gather from *De Civ. Dei* xxi, 10.

Reply to Objection 3. The future, which is distant in time, does not actually exist, and therefore is not knowable in itself, because so far as a thing falls short of being, so far does it fall short of being knowable. But what is locally distant exists actually, and is knowable in itself. Hence we cannot argue from distance of time to distance of place.

Objection 1. It would seem that separated souls know what takes place on earth; for otherwise they would have no care for it, as they have, according to what Dives said (*Lk.* 16:27,28), "I have five brethren. . . he may testify unto them, lest they also come into the place of torments." Therefore separated souls know what passes on earth.

Objection 2. Further, the dead often appear to the living, asleep or awake, and tell them of what takes place there; as Samuel appeared to Saul (*1 Kings* 28:11). But this could not be unless they knew what takes place here. Therefore they know what takes place on earth.

Objection 3. Further, separated souls know what happens among themselves. If, therefore, they do not know what takes place among us, it must be by reason of local distance; which has been shown to be false (a. 7).

On the contrary, It is written (*Job* 14:21): "He will not understand whether his children come to honor or dishonor."

I answer that, By natural knowledge, of which we are treating now, the souls of the dead do not know what passes on earth. This follows from what has been laid

down (a. 4), since the separated soul has knowledge of singulars, by being in a way determined to them, either by some vestige of previous knowledge or affection, or by the Divine order. Now the souls departed are in a state of separation from the living, both by Divine order and by their mode of existence, whilst they are joined to the world of incorporeal spiritual substances; and hence they are ignorant of what goes on among us. Whereof Gregory gives the reason thus: "The dead do not know how the living act, for the life of the spirit is far from the life of the flesh; and so, as corporeal things differ from incorporeal in genus, so they are distinct in knowledge" (*Moral.* xii). Augustine seems to say the same (*De Cura pro Mort.* xiii), when he asserts that, "the souls of the dead have no concern in the affairs of the living."

Gregory and Augustine, however, seem to be divided in opinion as regards the souls of the blessed in heaven, for Gregory continues the passage above quoted: "The case of the holy souls is different, for since they see the light of Almighty God, we cannot believe that external things are unknown to them." But Augustine (*De Cura pro Mort.* xiii) expressly says: "The dead, even the saints do not know what is done by the living or by their own children," as a gloss quotes

on the text, “Abraham hath not known us” (Is. 63:16). He confirms this opinion by saying that he was not visited, nor consoled in sorrow by his mother, as when she was alive; and he could not think it possible that she was less kind when in a happier state; and again by the fact that the Lord promised to king Josias that he should die, lest he should see his people’s afflictions (4 Kings 22:20). Yet Augustine says this in doubt; and premises, “Let every one take, as he pleases, what I say.” Gregory, on the other hand, is positive, since he says, “We cannot believe.” His opinion, indeed, seems to be the more probable one—that the souls of the blessed who see God do know all that passes here. For they are equal to the angels, of whom Augustine says that they know what happens among those living on earth. But as the souls of the blessed are most perfectly united to Divine justice, they do not suffer from sorrow, nor do they interfere in mundane affairs, except in accordance with Divine justice.

Reply to Objection 1. The souls of the departed may care for the living, even if ignorant of their state; just as we care for the dead by pouring forth prayer on their behalf, though we are ignorant of their state. Moreover, the affairs of the living can be made known

to them not immediately, but the souls who pass hence thither, or by angels and demons, or even by “the revelation of the Holy Ghost,” as Augustine says in the same book.

Reply to Objection 2. That the dead appear to the living in any way whatever is either by the special dispensation of God; in order that the souls of the dead may interfere in affairs of the living—and this is to be accounted as miraculous. Or else such apparitions occur through the instrumentality of bad or good angels, without the knowledge of the departed; as may likewise happen when the living appear, without their own knowledge, to others living, as Augustine says in the same book. And so it may be said of Samuel that he appeared through Divine revelation; according to Eccclus. 46:23, “he slept, and told the king the end of his life.” Or, again, this apparition was procured by the demons; unless, indeed, the authority of Ecclesiasticus be set aside through not being received by the Jews as canonical Scripture.

Reply to Objection 3. This kind of ignorance does not proceed from the obstacle of local distance, but from the cause mentioned above.

Objection 1. It would seem that the soul separated from the body can understand nothing at all. For the Philosopher says (*De Anima* i, 4) that “the understanding is corrupted together with its interior principle.” But by death all human interior principles are corrupted. Therefore also the intellect itself is corrupted.

Objection 2. Further, the human soul is hindered from understanding when the senses are tied, and by a distracted imagination, as explained above (q. 84, Aa. 7,8). But death destroys the senses and imagination, as we have shown above (q. 77, a. 8). Therefore after death the soul understands nothing.

Objection 3. Further, if the separated soul can understand, this must be by means of some species. But it does not understand by means of innate species, because it has none such; being at first “like a tablet on which nothing is written”: nor does it understand by species abstracted from things, for it does not then possess organs of sense and imagination which are necessary for the abstraction of species: nor does it understand by means of species, formerly abstracted and retained in the soul; for if that were so, a child’s soul would have no means of understanding at all: nor does it understand by means of intelligible species divinely infused, for such knowledge would not be natural, such as we treat of now, but the effect of grace. Therefore the soul apart from the body understands nothing.

On the contrary, The Philosopher says (*De Anima* i, 1), “If the soul had no proper operation, it could not be separated from the body.” But the soul is separated from the body; therefore it has a proper operation and above all, that which consists in intelligence. Therefore the soul can understand when it is apart from the body.

I answer that, The difficulty in solving this question arises from the fact that the soul united to the body can understand only by turning to the phantasms, as experience shows. Did this not proceed from the soul’s very nature, but accidentally through its being bound up with the body, as the Platonists said, the difficulty would vanish; for in that case when the body was once removed, the soul would at once return to its own nature, and would understand intelligible things simply, without turning to the phantasms, as is exemplified in the case of other separate substances. In that case, however, the union of soul and body would not be for the soul’s good, for evidently it would understand worse in the body than out of it; but for the good of the body, which would be unreasonable, since matter exists on account of the form, and not the form for the sake of matter. But if we admit that the nature of the soul requires it to understand by turning to the phantasms, it will seem, since death does not change its nature, that it can then naturally understand nothing; as the phantasms are wanting to which it may turn.

To solve this difficulty we must consider that as nothing acts except so far as it is actual, the mode of

action in every agent follows from its mode of existence. Now the soul has one mode of being when in the body, and another when apart from it, its nature remaining always the same; but this does not mean that its union with the body is an accidental thing, for, on the contrary, such union belongs to its very nature, just as the nature of a light object is not changed, when it is in its proper place, which is natural to it, and outside its proper place, which is beside its nature. The soul, therefore, when united to the body, consistently with that mode of existence, has a mode of understanding, by turning to corporeal phantasms, which are in corporeal organs; but when it is separated from the body, it has a mode of understanding, by turning to simply intelligible objects, as is proper to other separate substances. Hence it is as natural for the soul to understand by turning to the phantasms as it is for it to be joined to the body; but to be separated from the body is not in accordance with its nature, and likewise to understand without turning to the phantasms is not natural to it; and hence it is united to the body in order that it may have an existence and an operation suitable to its nature. But here again a difficulty arises. For since nature is always ordered to what is best, and since it is better to understand by turning to simply intelligible objects than by turning to the phantasms; God should have ordered the soul’s nature so that the nobler way of understanding would have been natural to it, and it would not have needed the body for that purpose.

In order to resolve this difficulty we must consider that while it is true that it is nobler in itself to understand by turning to something higher than to understand by turning to phantasms, nevertheless such a mode of understanding was not so perfect as regards what was possible to the soul. This will appear if we consider that every intellectual substance possesses intellective power by the influence of the Divine light, which is one and simple in its first principle, and the farther off intellectual creatures are from the first principle so much the more is the light divided and diversified, as is the case with lines radiating from the centre of a circle. Hence it is that God by His one Essence understands all things; while the superior intellectual substances understand by means of a number of species, which nevertheless are fewer and more universal and bestow a deeper comprehension of things, because of the efficaciousness of the intellectual power of such natures: whereas the inferior intellectual natures possess a greater number of species, which are less universal, and bestow a lower degree of comprehension, in proportion as they recede from the intellectual power of the higher natures. If, therefore, the inferior substances received species in the same degree of universality as the superior substances, since they are not so strong in understanding, the knowledge which they would derive through them would be imperfect, and of a general and confused nature. We

can see this to a certain extent in man, for those who are of weaker intellect fail to acquire perfect knowledge through the universal conceptions of those who have a better understanding, unless things are explained to them singly and in detail. Now it is clear that in the natural order human souls hold the lowest place among intellectual substances. But the perfection of the universe required various grades of being. If, therefore, God had willed souls to understand in the same way as separate substances, it would follow that human knowledge, so far from being perfect, would be confused and general. Therefore to make it possible for human souls to possess perfect and proper knowledge, they were so made that their nature required them to be joined to bodies, and thus to receive the proper and adequate knowledge of sensible things from the sensible things themselves; thus we see in the case of uneducated men that they have to be taught by sensible examples.

It is clear then that it was for the soul's good that it was united to a body, and that it understands by turning to the phantasms. Nevertheless it is possible for it to exist apart from the body, and also to understand in

another way.

Reply to Objection 1. The Philosopher's words carefully examined will show that he said this on the previous supposition that understanding is a movement of body and soul as united, just as sensation is, for he had not as yet explained the difference between intellect and sense. We may also say that he is referring to the way of understanding by turning to phantasms. This is also the meaning of the second objection.

Reply to Objection 3. The separated soul does not understand by way of innate species, nor by species abstracted then, nor only by species retained, and this the objection proves; but the soul in that state understands by means of participated species arising from the influence of the Divine light, shared by the soul as by other separate substances; though in a lesser degree. Hence as soon as it ceases to act by turning to corporeal (phantasms), the soul turns at once to the superior things; nor is this way of knowledge unnatural, for God is the author of the influx of both of the light of grace and of the light of nature.

Objection 1. It would seem that the separated soul does not understand separate substances. For the soul is more perfect when joined to the body than when existing apart from it, being an essential part of human nature; and every part of a whole is more perfect when it exists in that whole. But the soul in the body does not understand separate substances as shown above (q. 88, a. 1). Therefore much less is it able to do so when apart from the body.

Objection 2. Further, whatever is known is known either by its presence or by its species. But separate substances cannot be known to the soul by their presence, for God alone can enter into the soul; nor by means of species abstracted by the soul from an angel, for an angel is more simple than a soul. Therefore the separated soul cannot at all understand separate substances.

Objection 3. Further, some philosophers said that the ultimate happiness of man consists in the knowledge of separate substances. If, therefore, the separated soul can understand separate substances, its happiness would be secured by its separation alone; which cannot be reasonably be said.

On the contrary, Souls apart from the body know other separated souls; as we see in the case of the rich man in hell, who saw Lazarus and Abraham (Lk. 16:23). Therefore separated souls see the devils and the angels.

I answer that, Augustine says (De Trin. ix, 3), “our mind acquires the knowledge of incorporeal things by itself”—i.e. by knowing itself (q. 88, a. 1, ad 1). Therefore from the knowledge which the separated soul has of itself, we can judge how it knows other separate things. Now it was said above (a. 1), that as long as it is united to the body the soul understands by turning to phantasms, and therefore it does not understand itself save through becoming actually intelligent by means of ideas abstracted from phantasms; for thus it understands it-

self through its own act, as shown above (q. 87, a. 1). When, however, it is separated from the body, it understands no longer by turning to phantasms, but by turning to simply intelligible objects; hence in that state it understands itself through itself. Now, every separate substance “understands what is above itself and what is below itself, according to the mode of its substance” (De Causis viii): for a thing is understood according as it is in the one who understands; while one thing is in another according to the nature of that in which it is. And the mode of existence of a separated soul is inferior to that of an angel, but is the same as that of other separated souls. Therefore the soul apart from the body has perfect knowledge of other separated souls, but it has an imperfect and defective knowledge of the angels so far as its natural knowledge is concerned. But the knowledge of glory is otherwise.

Reply to Objection 1. The separated soul is, indeed, less perfect considering its nature in which it communicates with the nature of the body: but it has a greater freedom of intelligence, since the weight and care of the body is a clog upon the clearness of its intelligence in the present life.

Reply to Objection 2. The separated soul understands the angels by means of divinely impressed ideas; which, however, fail to give perfect knowledge of them, forasmuch as the nature of the soul is inferior to that of an angel.

Reply to Objection 3. Man’s ultimate happiness consists not in the knowledge of any separate substances; but in the knowledge of God, Who is seen only by grace. The knowledge of other separate substances if perfectly understood gives great happiness—not final and ultimate happiness. But the separated soul does not understand them perfectly, as was shown above in this article.

Objection 1. It would seem that the separated soul knows all natural things. For the types of all natural things exist in separate substances. Therefore, as separated souls know separate substances, they also know all natural things.

Objection 2. Further, whoever understands the greater intelligible, will be able much more to understand the lesser intelligible. But the separated soul understands immaterial substances, which are in the highest degree of intelligibility. Therefore much more can it understand all natural things which are in a lower degree of intelligibility.

On the contrary, The devils have greater natural knowledge than the separated soul; yet they do not know all natural things, but have to learn many things by long experience, as Isidore says (*De Summo Bono* i). Therefore neither can the separated soul know all natural things.

I answer that, As stated above (a. 1), the separated soul, like the angels, understands by means of species, received from the influence of the Divine light. Nevertheless, as the soul by nature is inferior to an angel, to whom this kind of knowledge is natural, the soul apart from the body through such species does not receive perfect knowledge, but only a general and confused kind of knowledge. Separated souls, therefore, have the same relation through such species to imperfect and confused knowledge of natural things as the an-

gels have to the perfect knowledge thereof. Now angels through such species know all natural things perfectly; because all that God has produced in the respective natures of natural things has been produced by Him in the angelic intelligence, as Augustine says (*Gen. ad lit.* ii, 8). Hence it follows that separated souls know all natural things not with a certain and proper knowledge, but in a general and confused manner.

Reply to Objection 1. Even an angel does not understand all natural things through his substance, but through certain species, as stated above (q. 87, a. 1). So it does not follow that the soul knows all natural things because it knows separate substances after a fashion.

Reply to Objection 2. As the soul separated from the body does not perfectly understand separate substances, so neither does it know all natural things perfectly; but it knows them confusedly, as above explained in this article.

Reply to Objection 3. Isidore speaks of the knowledge of the future which neither angels, nor demons, nor separated souls, know except so far as future things pre-exist in their causes or are known by Divine revelation. But we are here treating of the knowledge of natural things.

Reply to Objection 4. Knowledge acquired here by study is proper and perfect; the knowledge of which we speak is confused. Hence it does not follow that to study in order to learn is useless.

Objection 1. It would seem that the separated soul does not know singulars. For no cognitive power besides the intellect remains in the separated soul, as is clear from what has been said above (q. 77, a. 8). But the intellect cannot know singulars, as we have shown (q. 86, a. 1). Therefore the separated soul cannot know singulars.

Objection 2. Further, the knowledge of the singular is more determinate than knowledge of the universal. But the separated soul has no determinate knowledge of the species of natural things, therefore much less can it know singulars.

Objection 3. Further, if it knew the singulars, yet not by sense, for the same reason it would know all singulars. But it does not know all singulars. Therefore it knows none.

On the contrary, The rich man in hell said: “I have five brethren” (Lk. 16:28).

I answer that, Separated souls know some singulars, but not all, not even all present singulars. To understand this, we must consider that there is a twofold way of knowing things, one by means of abstraction from phantasms, and in this way singulars cannot be directly known by the intellect, but only indirectly, as stated above (q. 86, a. 1). The other way of understanding is by the infusion of species by God, and in that way it is possible for the intellect to know singulars. For as God knows all things, universal and singular, by His

Essence, as the cause of universal and individual principles (q. 14, a. 2), so likewise separate substances can know singulars by species which are a kind of participated similitude of the Divine Essence. There is a difference, however, between angels and separated souls in the fact that through these species the angels have a perfect and proper knowledge of things; whereas separated have only a confused knowledge. Hence the angels, by reason of their perfect intellect, through these species, know not only the specific natures of things, but also the singulars contained in those species; whereas separated souls by these species know only those singulars to which they are determined by former knowledge in this life, or by some affection, or by natural aptitude, or by the disposition of the Divine order; because whatever is received into anything is conditioned according to the mode of the recipient.

Reply to Objection 1. The intellect does not know the singular by way of abstraction; neither does the separated soul know it thus; but as explained above.

Reply to Objection 2. The knowledge of the separated soul is confined to those species or individuals to which the soul has some kind of determinate relation, as we have said.

Reply to Objection 3. The separated soul has not the same relation to all singulars, but one relation to some, and another to others. Therefore there is not the same reason why it should know all singulars.

Objection 1. It would seem that the habit of knowledge acquired in this life does not remain in the soul separated from the body: for the Apostle says: “Knowledge shall be destroyed” (1 Cor. 13:8).

Objection 2. Further, some in this world who are less good enjoy knowledge denied to others who are better. If, therefore, the habit of knowledge remained in the soul after death, it would follow that some who are less good would, even in the future life, excel some who are better; which seems unreasonable.

Objection 3. Further, separated souls will possess knowledge by influence of the Divine light. Supposing, therefore, that knowledge here acquired remained in the separated soul, it would follow that two forms of the same species would co-exist in the same subject which cannot be.

Objection 4. Further, the Philosopher says (Praedic. vi, 4,5), that “a habit is a quality hard to remove: yet sometimes knowledge is destroyed by sickness or the like.” But in this life there is no change so thorough as death. Therefore it seems that the habit of knowledge is destroyed by death.

On the contrary, Jerome says (Ep. liii, ad Paulinum), “Let us learn on earth that kind of knowledge which will remain with us in heaven.”

I answer that, Some say that the habit of knowledge resides not in the intellect itself, but in the sensitive powers, namely, the imaginative, cogitative, and memorative, and that the intelligible species are not kept in the passive intellect. If this were true, it would follow that when the body is destroyed by death, knowledge here acquired would also be entirely destroyed.

But, since knowledge resides in the intellect, which is “the abode of species,” as the Philosopher says (De Anima iii, 4), the habit of knowledge here acquired must be partly in the aforesaid sensitive powers and partly in the intellect. This can be seen by considering the very actions from which knowledge arises. For “habits are like the actions whereby they are acquired” (Ethic. ii, 1). Now the actions of the intellect, by which knowledge is here acquired, are performed by the mind turning to the phantasms in the aforesaid sensitive powers. Hence through such acts the passive intellect acquires a certain facility in considering the species received: and the aforesaid sensitive powers acquire a certain aptitude in seconding the action of the intellect when it turns to them to consider the intelligible object. But as the intellectual act resides chiefly and formally

in the intellect itself, whilst it resides materially and dispositively in the inferior powers, the same distinction is to be applied to habit.

Knowledge, therefore, acquired in the present life does not remain in the separated soul, as regards what belongs to the sensitive powers; but as regards what belongs to the intellect itself, it must remain; because, as the Philosopher says (De Long. et Brev. Vitae ii), a form may be corrupted in two ways; first, directly, when corrupted by its contrary, as heat, by cold; and secondly, indirectly, when its subject is corrupted. Now it is evident that human knowledge is not corrupted through corruption of the subject, for the intellect is an incorruptible faculty, as above stated (q. 79, a. 2, ad 2). Neither can the intelligible species in the passive intellect be corrupted by their contrary; for there is no contrary to intelligible “intentions,” above all as regards simple intelligence of “what a thing is.” But contrariety may exist in the intellect as regards mental composition and division, or also reasoning; so far as what is false in statement or argument is contrary to truth. And thus knowledge may be corrupted by its contrary when a false argument seduces anyone from the knowledge of truth. For this reason the Philosopher in the above work mentions two ways in which knowledge is corrupted directly: namely, “forgetfulness” on the part of the memorative power, and “deception” on the part of a false argument. But these have no place in the separated soul. Therefore we must conclude that the habit of knowledge, so far as it is in the intellect, remains in the separated soul.

Reply to Objection 1. The Apostle is not speaking of knowledge as a habit, but as to the act of knowing; and hence he says, in proof of the assertion quoted, “Now, I know in part.”

Reply to Objection 2. As a less good man may exceed a better man in bodily stature, so the same kind of man may have a habit of knowledge in the future life which a better man may not have. Such knowledge, however, cannot be compared with the other prerogatives enjoyed by the better man.

Reply to Objection 3. These two kinds of knowledge are not of the same species, so there is no impossibility.

Reply to Objection 4. This objection considers the corruption of knowledge on the part of the sensitive powers.

Objection 1. It would seem that the act of knowledge here acquired does not remain in the separated soul. For the Philosopher says (*De Anima* i, 4), that when the body is corrupted, “the soul neither remembers nor loves.” But to consider what is previously known is an act of memory. Therefore the separated soul cannot retain an act of knowledge here acquired.

Objection 2. Further, intelligible species cannot have greater power in the separated soul than they have in the soul united to the body. But in this life we cannot understand by intelligible species without turning to phantasms, as shown above (q. 84, a. 7). Therefore the separated soul cannot do so, and thus it cannot understand at all by intelligible species acquired in this life.

Objection 3. Further, the Philosopher says (*Ethic.* ii, 1), that “habits produce acts similar to those whereby they are acquired.” But the habit of knowledge is acquired here by acts of the intellect turning to phantasms: therefore it cannot produce any other acts. These acts, however, are not adapted to the separated soul. Therefore the soul in the state of separation cannot produce any act of knowledge acquired in this life.

On the contrary, It was said to Dives in hell (*Lk.* 16:25): “Remember thou didst receive good things in thy lifetime.”

I answer that, Action offers two things for our consideration—its species and its mode. Its species comes from the object, whereto the faculty of knowl-

edge is directed by the (intelligible) species, which is the object’s similitude; whereas the mode is gathered from the power of the agent. Thus that a person see a stone is due to the species of the stone in his eye; but that he see it clearly, is due to the eye’s visual power. Therefore as the intelligible species remain in the separated soul, as stated above (a. 5), and since the state of the separated soul is not the same as it is in this life, it follows that through the intelligible species acquired in this life the soul apart from the body can understand what it understood formerly, but in a different way; not by turning to phantasms, but by a mode suited to a soul existing apart from the body. Thus the act of knowledge here acquired remains in the separated soul, but in a different way.

Reply to Objection 1. The Philosopher speaks of remembrance, according as memory belongs to the sensitive part, but not as belonging in a way to the intellect, as explained above (q. 79, a. 6).

Reply to Objection 2. The different mode of intelligence is produced by the different state of the intelligent soul; not by diversity of species.

Reply to Objection 3. The acts which produce a habit are like the acts caused by that habit, in species, but not in mode. For example, to do just things, but not justly, that is, pleasurably, causes the habit of political justice, whereby we act pleasurably. (Cf. Aristotle, *Ethic.* v, 8: *Magn. Moral.* i, 34).

Objection 1. It would seem that local distance impedes the separated soul's knowledge. For Augustine says (*De Cura pro Mort.* xiii), that "the souls of the dead are where they cannot know what is done here." But they know what is done among themselves. Therefore local distance impedes the knowledge in the separated soul.

Objection 2. Further, Augustine says (*De Divin. Daemon.* iii), that "the demon's rapidity of movement enables them to tell things unknown to us." But agility of movement would be useless in that respect unless their knowledge was impeded by local distance; which, therefore, is a much greater hindrance to the knowledge of the separated soul, whose nature is inferior to the demon's.

Objection 3. Further, as there is distance of place, so is there distance of time. But distance of time impedes knowledge in the separated soul, for the soul is ignorant of the future. Therefore it seems that distance of place also impedes its knowledge.

On the contrary, It is written (*Lk.* 16:23), that Dives, "lifting up his eyes when he was in torment, saw Abraham afar off." Therefore local distance does not impede knowledge in the separated soul.

I answer that, Some have held that the separated soul knows the singular by abstraction from the sensible. If that were so, it might be that local distance would impede its knowledge; for either the sensible would

need to act upon the soul, or the soul upon the sensible, and in either case a determinate distance would be necessary. This is, however, impossible because abstraction of the species from the sensible is done through the senses and other sensible faculties which do not remain actually in the soul apart from the body. But the soul when separated understands singulars by species derived from the Divine light, which is indifferent to what is near or distant. Hence knowledge in the separated soul is not hindered by local distance.

Reply to Objection 1. Augustine says that the souls of the departed cannot see what is done here, not because they are 'there,' as if impeded by local distance; but for some other cause, as we shall explain (a. 8).

Reply to Objection 2. Augustine speaks there in accordance with the opinion that demons have bodies naturally united to them, and so have sensitive powers, which require local distance. In the same book he expressly sets down this opinion, though apparently rather by way of narration than of assertion, as we may gather from *De Civ. Dei* xxi, 10.

Reply to Objection 3. The future, which is distant in time, does not actually exist, and therefore is not knowable in itself, because so far as a thing falls short of being, so far does it fall short of being knowable. But what is locally distant exists actually, and is knowable in itself. Hence we cannot argue from distance of time to distance of place.

Objection 1. It would seem that separated souls know what takes place on earth; for otherwise they would have no care for it, as they have, according to what Dives said (Lk. 16:27,28), “I have five brethren. . . he may testify unto them, lest they also come into the place of torments.” Therefore separated souls know what passes on earth.

Objection 2. Further, the dead often appear to the living, asleep or awake, and tell them of what takes place there; as Samuel appeared to Saul (1 Kings 28:11). But this could not be unless they knew what takes place here. Therefore they know what takes place on earth.

Objection 3. Further, separated souls know what happens among themselves. If, therefore, they do not know what takes place among us, it must be by reason of local distance; which has been shown to be false (a. 7).

On the contrary, It is written (Job 14:21): “He will not understand whether his children come to honor or dishonor.”

I answer that, By natural knowledge, of which we are treating now, the souls of the dead do not know what passes on earth. This follows from what has been laid down (a. 4), since the separated soul has knowledge of singulars, by being in a way determined to them, either by some vestige of previous knowledge or affection, or by the Divine order. Now the souls departed are in a state of separation from the living, both by Divine order and by their mode of existence, whilst they are joined to the world of incorporeal spiritual substances; and hence they are ignorant of what goes on among us. Whereof Gregory gives the reason thus: “The dead do not know how the living act, for the life of the spirit is far from the life of the flesh; and so, as corporeal things differ from incorporeal in genus, so they are distinct in knowledge” (Moral. xii). Augustine seems to say the same (De Cura pro Mort. xiii), when he asserts that, “the souls of the dead have no concern in the affairs of the living.”

Gregory and Augustine, however, seem to be divided in opinion as regards the souls of the blessed in heaven, for Gregory continues the passage above quoted: “The case of the holy souls is different, for since they see the light of Almighty God, we cannot believe that external things are unknown to them.” But Augustine (De Cura pro Mort. xiii) expressly says: “The dead, even the saints do not know what is done by the living or by their own children,” as a gloss quotes

on the text, “Abraham hath not known us” (Is. 63:16). He confirms this opinion by saying that he was not visited, nor consoled in sorrow by his mother, as when she was alive; and he could not think it possible that she was less kind when in a happier state; and again by the fact that the Lord promised to king Josias that he should die, lest he should see his people’s afflictions (4 Kings 22:20). Yet Augustine says this in doubt; and premises, “Let every one take, as he pleases, what I say.” Gregory, on the other hand, is positive, since he says, “We cannot believe.” His opinion, indeed, seems to be the more probable one—that the souls of the blessed who see God do know all that passes here. For they are equal to the angels, of whom Augustine says that they know what happens among those living on earth. But as the souls of the blessed are most perfectly united to Divine justice, they do not suffer from sorrow, nor do they interfere in mundane affairs, except in accordance with Divine justice.

Reply to Objection 1. The souls of the departed may care for the living, even if ignorant of their state; just as we care for the dead by pouring forth prayer on their behalf, though we are ignorant of their state. Moreover, the affairs of the living can be made known to them not immediately, but the souls who pass hence thither, or by angels and demons, or even by “the revelation of the Holy Ghost,” as Augustine says in the same book.

Reply to Objection 2. That the dead appear to the living in any way whatever is either by the special dispensation of God; in order that the souls of the dead may interfere in affairs of the living—and this is to be accounted as miraculous. Or else such apparitions occur through the instrumentality of bad or good angels, without the knowledge of the departed; as may likewise happen when the living appear, without their own knowledge, to others living, as Augustine says in the same book. And so it may be said of Samuel that he appeared through Divine revelation; according to Ecclus. 46:23, “he slept, and told the king the end of his life.” Or, again, this apparition was procured by the demons; unless, indeed, the authority of Ecclesiasticus be set aside through not being received by the Jews as canonical Scripture.

Reply to Objection 3. This kind of ignorance does not proceed from the obstacle of local distance, but from the cause mentioned above.

FIRST PART, QUESTION 90

Of the First Production of Man's Soul (In Four Articles)

After the foregoing we must consider the first production of man, concerning which there are four subjects of treatment: (1) the production of man himself; (2) the end of this production; (3) the state and condition of the first man; (4) the place of his abode. Concerning the production of man, there are three things to be considered: (1) the production of man's soul; (2) the production of man's body; (3) the production of the woman.

Under the first head there are four points of inquiry:

- (1) Whether man's soul was something made, or was of the Divine substance?
- (2) Whether, if made, it was created?
- (3) Whether it was made by angelic instrumentality?
- (4) Whether it was made before the body?

Whether the soul was made or was of God's substance?

Ia q. 90 a. 1

Objection 1. It would seem that the soul was not made, but was God's substance. For it is written (Gn. 2:7): "God formed man of the slime of the earth, and breathed into his face the breath of life, and man was made a living soul." But he who breathes sends forth something of himself. Therefore the soul, whereby man lives, is of the Divine substance.

Objection 2. Further, as above explained (q. 75, a. 5), the soul is a simple form. But a form is an act. Therefore the soul is a pure act; which applies to God alone. Therefore the soul is of God's substance.

Objection 3. Further, things that exist and do differ are the same. But God and the mind exist, and in no way differ, for they could only be differentiated by certain differences, and thus would be composite. Therefore God and the human mind are the same.

On the contrary, Augustine (De Orig. Animae iii, 15) mentions certain opinions which he calls "exceedingly and evidently perverse, and contrary to the Catholic Faith," among which the first is the opinion that "God made the soul not out of nothing, but from Himself."

I answer that, To say that the soul is of the Divine substance involves a manifest improbability. For, as is clear from what has been said (q. 77, a. 2; q. 79, a. 2; q. 84, a. 6), the human soul is sometimes in a state of potentiality to the act of intelligence—acquires its knowledge somehow from things—and thus has various powers; all of which are incompatible with the Divine Nature, Which is a pure act—receives nothing from any other—and admits of no variety in itself, as we have proved (q. 3, Aa. 1,7; q. 9, a. 1).

This error seems to have originated from two statements of the ancients. For those who first began to observe the nature of things, being unable to rise above their imagination, supposed that nothing but bodies existed. Therefore they said that God was a body, which they considered to be the principle of other bodies. And since they held that the soul was of the same nature as

that body which they regarded as the first principle, as is stated De Anima i, 2, it followed that the soul was of the nature of God Himself. According to this supposition, also, the Manichaeans, thinking that God was corporeal light, held that the soul was part of that light bound up with the body.

Then a further step in advance was made, and some surmised the existence of something incorporeal, not apart from the body, but the form of a body; so that Varro said, "God is a soul governing the world by movement and reason," as Augustine relates (De Civ. Dei vii, 6*) So some supposed man's soul to be part of that one soul, as man is a part of the whole world; for they were unable to go so far as to understand the different degrees of spiritual substance, except according to the distinction of bodies.

But, all these theories are impossible, as proved above (q. 3, Aa. 1,8; and q. 75, a. 1), wherefore it is evidently false that the soul is of the substance of God.

Reply to Objection 1. The term "breathe" is not to be taken in the material sense; but as regards the act of God, to breathe [spirare], is the same as to "make a spirit." Moreover, in the material sense, man by breathing does not send forth anything of his own substance, but an extraneous thing.

Reply to Objection 2. Although the soul is a simple form in its essence, yet it is not its own existence, but is a being by participation, as above explained (q. 75, a. 5, ad 4). Therefore it is not a pure act like God.

Reply to Objection 3. That which differs, properly speaking, differs in something; wherefore we seek for difference where we find also resemblance. For this reason things which differ must in some way be compound; since they differ in something, and in something resemble each other. In this sense, although all that differ are diverse, yet all things that are diverse do not differ. For simple things are diverse; yet do not differ from one another by differences which enter into their composition. For instance, a man and a horse differ by the difference

* The words as quoted are to be found iv. 31.

of rational and irrational; but we cannot say that these again differ by some further difference.

Whether the soul was produced by creation?

Ia q. 90 a. 2

Objection 1. It would seem that the soul was not produced by creation. For that which has in itself something material is produced from matter. But the soul is in part material, since it is not a pure act. Therefore the soul was made of matter; and hence it was not created.

Objection 2. Further, every actuality of matter is educed from the potentiality of that matter; for since matter is in potentiality to act, any act pre-exists in matter potentially. But the soul is the act of corporeal matter, as is clear from its definition. Therefore the soul is educed from the potentiality of matter.

Objection 3. Further, the soul is a form. Therefore, if the soul is created, all other forms also are created. Thus no forms would come into existence by generation; which is not true.

On the contrary, It is written (Gn. 1:27): “God created man to His own image.” But man is like to God in his soul. Therefore the soul was created.

I answer that, The rational soul can be made only by creation; which, however, is not true of other forms. The reason is because, since to be made is the way to existence, a thing must be made in such a way as is suitable to its mode of existence. Now that properly exists which itself has existence; as it were, subsisting in its own existence. Wherefore only substances are properly and truly called beings; whereas an accident has not existence, but something is (modified) by it, and so far is it called a being; for instance, whiteness is called a being, because by it something is white. Hence it is said *Metaph. vii, Did. vi, 1* that an accident should be described as “of something rather than as something.” The same is to be said of all non-subsistent forms. There-

fore, properly speaking, it does not belong to any non-existing form to be made; but such are said to be made through the composite substances being made. On the other hand, the rational soul is a subsistent form, as above explained (q. 75, a. 2). Wherefore it is competent to be and to be made. And since it cannot be made of pre-existing matter—whether corporeal, which would render it a corporeal being—or spiritual, which would involve the transmutation of one spiritual substance into another, we must conclude that it cannot exist except by creation.

Reply to Objection 1. The soul’s simple essence is as the material element, while its participated existence is its formal element; which participated existence necessarily co-exists with the soul’s essence, because existence naturally follows the form. The same reason holds if the soul is supposed to be composed of some spiritual matter, as some maintain; because the said matter is not in potentiality to another form, as neither is the matter of a celestial body; otherwise the soul would be corruptible. Wherefore the soul cannot in any way be made of pre-existent matter.

Reply to Objection 2. The production of act from the potentiality of matter is nothing else but something becoming actually that previously was in potentiality. But since the rational soul does not depend in its existence on corporeal matter, and is subsistent, and exceeds the capacity of corporeal matter, as we have seen (q. 75, a. 2), it is not educed from the potentiality of matter.

Reply to Objection 3. As we have said, there is no comparison between the rational soul and other forms.

Whether the rational soul is produced by God immediately?

Ia q. 90 a. 3

Objection 1. It would seem that the rational soul is not immediately made by God, but by the instrumentality of the angels. For spiritual things have more order than corporeal things. But inferior bodies are produced by means of the superior, as Dionysius says (*Div. Nom. iv*). Therefore also the inferior spirits, who are the rational souls, are produced by means of the superior spirits, the angels.

Objection 2. Further, the end corresponds to the beginning of things; for God is the beginning and end of all. Therefore the issue of things from their beginning corresponds to the forwarding of them to their end. But “inferior things are forwarded by the higher,” as Dionysius says (*Eccl. Hier. v*); therefore also the inferior are produced into existence by the higher, and souls by angels.

Objection 3. Further, “perfect is that which can produce its like,” as is stated *Metaph. v*. But spiri-

tual substances are much more perfect than corporeal. Therefore, since bodies produce their like in their own species, much more are angels able to produce something specifically inferior to themselves; and such is the rational soul.

On the contrary, It is written (Gn. 2:7) that God Himself “breathed into the face of man the breath of life.”

I answer that, Some have held that angels, acting by the power of God, produce rational souls. But this is quite impossible, and is against faith. For it has been proved that the rational soul cannot be produced except by creation. Now, God alone can create; for the first agent alone can act without presupposing the existence of anything; while the second cause always presupposes something derived from the first cause, as above explained (q. 75, a. 3): and every agent, that presupposes something to its act, acts by making a change therein.

Therefore everything else acts by producing a change, whereas God alone acts by creation. Since, therefore, the rational soul cannot be produced by a change in matter, it cannot be produced, save immediately by God.

Thus the replies to the objections are clear. For

that bodies produce their like or something inferior to themselves, and that the higher things lead forward the inferior—all these things are effected through a certain transmutation.

Whether the human soul was produced before the body?

Ia q. 90 a. 4

Objection 1. It would seem that the human soul was made before the body. For the work of creation preceded the work of distinction and adornment, as shown above (q. 66, a. 1; q. 70, a. 1). But the soul was made by creation; whereas the body was made at the end of the work of adornment. Therefore the soul of man was made before the body.

Objection 2. Further, the rational soul has more in common with the angels than with the brute animals. But angels were created before bodies, or at least, at the beginning with corporeal matter; whereas the body of man was formed on the sixth day, when also the animals were made. Therefore the soul of man was created before the body.

Objection 3. Further, the end is proportionate to the beginning. But in the end the soul outlasts the body. Therefore in the beginning it was created before the body.

On the contrary, The proper act is produced in its proper potentiality. Therefore since the soul is the proper act of the body, the soul was produced in the body.

I answer that, Origen (*Peri Archon* i, 7,8) held that not only the soul of the first man, but also the souls of all men were created at the same time as the angels, before their bodies: because he thought that all spiritual substances, whether souls or angels, are equal in their natural condition, and differ only by merit; so that some of them—namely, the souls of men or of heavenly bodies—are united to bodies while others remain in their different orders entirely free from matter. Of this opinion we have already spoken (q. 47, a. 2); and so we need say nothing about it here.

Augustine, however (*Gen. ad lit.* vii, 24), says that the soul of the first man was created at the same time as the angels, before the body, for another reason; because he supposes that the body of man, during the work of the six days, was produced, not actually, but only as to some “causal virtues”; which cannot be said of the soul, because neither was it made of any pre-existing corporeal or spiritual matter, nor could it be produced from any created virtue. Therefore it seems that the soul itself, during the work of the six days, when all things

were made, was created, together with the angels; and that afterwards, by its own will, was joined to the service of the body. But he does not say this by way of assertion; as his words prove. For he says (*Gen. ad lit.* vii, 29): “We may believe, if neither Scripture nor reason forbid, that man was made on the sixth day, in the sense that his body was created as to its causal virtue in the elements of the world, but that the soul was already created.”

Now this could be upheld by those who hold that the soul has of itself a complete species and nature, and that it is not united to the body as its form, but as its administrator. But if the soul is united to the body as its form, and is naturally a part of human nature, the above supposition is quite impossible. For it is clear that God made the first things in their perfect natural state, as their species required. Now the soul, as a part of human nature, has its natural perfection only as united to the body. Therefore it would have been unfitting for the soul to be created without the body.

Therefore, if we admit the opinion of Augustine about the work of the six days (q. 74, a. 2), we may say that the human soul preceded in the work of the six days by a certain generic similitude, so far as it has intellectual nature in common with the angels; but was itself created at the same time as the body. According to the other saints, both the body and soul of the first man were produced in the work of the six days.

Reply to Objection 1. If the soul by its nature were a complete species, so that it might be created as to itself, this reason would prove that the soul was created by itself in the beginning. But as the soul is naturally the form of the body, it was necessarily created, not separately, but in the body.

Reply to Objection 2. The same observation applies to the second objection. For if the soul had a species of itself it would have something still more in common with the angels. But, as the form of the body, it belongs to the animal genus, as a formal principle.

Reply to Objection 3. That the soul remains after the body, is due to a defect of the body, namely, death. Which defect was not due when the soul was first created.

Objection 1. It would seem that the soul was not made, but was God's substance. For it is written (Gn. 2:7): "God formed man of the slime of the earth, and breathed into his face the breath of life, and man was made a living soul." But he who breathes sends forth something of himself. Therefore the soul, whereby man lives, is of the Divine substance.

Objection 2. Further, as above explained (q. 75, a. 5), the soul is a simple form. But a form is an act. Therefore the soul is a pure act; which applies to God alone. Therefore the soul is of God's substance.

Objection 3. Further, things that exist and do differ are the same. But God and the mind exist, and in no way differ, for they could only be differentiated by certain differences, and thus would be composite. Therefore God and the human mind are the same.

On the contrary, Augustine (De Orig. Animae iii, 15) mentions certain opinions which he calls "exceedingly and evidently perverse, and contrary to the Catholic Faith," among which the first is the opinion that "God made the soul not out of nothing, but from Himself."

I answer that, To say that the soul is of the Divine substance involves a manifest improbability. For, as is clear from what has been said (q. 77, a. 2; q. 79, a. 2; q. 84, a. 6), the human soul is sometimes in a state of potentiality to the act of intelligence—acquires its knowledge somehow from things—and thus has various powers; all of which are incompatible with the Divine Nature, Which is a pure act—receives nothing from any other—and admits of no variety in itself, as we have proved (q. 3, Aa. 1,7; q. 9, a. 1).

This error seems to have originated from two statements of the ancients. For those who first began to observe the nature of things, being unable to rise above their imagination, supposed that nothing but bodies existed. Therefore they said that God was a body, which they considered to be the principle of other bodies. And since they held that the soul was of the same nature as that body which they regarded as the first principle, as is

stated De Anima i, 2, it followed that the soul was of the nature of God Himself. According to this supposition, also, the Manichaeans, thinking that God was corporeal light, held that the soul was part of that light bound up with the body.

Then a further step in advance was made, and some surmised the existence of something incorporeal, not apart from the body, but the form of a body; so that Varro said, "God is a soul governing the world by movement and reason," as Augustine relates (De Civ. Dei vii, 6*) So some supposed man's soul to be part of that one soul, as man is a part of the whole world; for they were unable to go so far as to understand the different degrees of spiritual substance, except according to the distinction of bodies.

But, all these theories are impossible, as proved above (q. 3, Aa. 1,8; and q. 75, a. 1), wherefore it is evidently false that the soul is of the substance of God.

Reply to Objection 1. The term "breathe" is not to be taken in the material sense; but as regards the act of God, to breathe [spirare], is the same as to "make a spirit." Moreover, in the material sense, man by breathing does not send forth anything of his own substance, but an extraneous thing.

Reply to Objection 2. Although the soul is a simple form in its essence, yet it is not its own existence, but is a being by participation, as above explained (q. 75, a. 5, ad 4). Therefore it is not a pure act like God.

Reply to Objection 3. That which differs, properly speaking, differs in something; wherefore we seek for difference where we find also resemblance. For this reason things which differ must in some way be compound; since they differ in something, and in something resemble each other. In this sense, although all that differ are diverse, yet all things that are diverse do not differ. For simple things are diverse; yet do not differ from one another by differences which enter into their composition. For instance, a man and a horse differ by the difference of rational and irrational; but we cannot say that these again differ by some further difference.

* The words as quoted are to be found iv. 31.

Objection 1. It would seem that the soul was not produced by creation. For that which has in itself something material is produced from matter. But the soul is in part material, since it is not a pure act. Therefore the soul was made of matter; and hence it was not created.

Objection 2. Further, every actuality of matter is educed from the potentiality of that matter; for since matter is in potentiality to act, any act pre-exists in matter potentially. But the soul is the act of corporeal matter, as is clear from its definition. Therefore the soul is educed from the potentiality of matter.

Objection 3. Further, the soul is a form. Therefore, if the soul is created, all other forms also are created. Thus no forms would come into existence by generation; which is not true.

On the contrary, It is written (Gn. 1:27): “God created man to His own image.” But man is like to God in his soul. Therefore the soul was created.

I answer that, The rational soul can be made only by creation; which, however, is not true of other forms. The reason is because, since to be made is the way to existence, a thing must be made in such a way as is suitable to its mode of existence. Now that properly exists which itself has existence; as it were, subsisting in its own existence. Wherefore only substances are properly and truly called beings; whereas an accident has not existence, but something is (modified) by it, and so far is it called a being; for instance, whiteness is called a being, because by it something is white. Hence it is said *Metaph. vii, Did. vi, 1* that an accident should be described as “of something rather than as something.” The same is to be said of all non-subsistent forms. There-

fore, properly speaking, it does not belong to any non-existing form to be made; but such are said to be made through the composite substances being made. On the other hand, the rational soul is a subsistent form, as above explained (q. 75, a. 2). Wherefore it is competent to be and to be made. And since it cannot be made of pre-existing matter—whether corporeal, which would render it a corporeal being—or spiritual, which would involve the transmutation of one spiritual substance into another, we must conclude that it cannot exist except by creation.

Reply to Objection 1. The soul’s simple essence is as the material element, while its participated existence is its formal element; which participated existence necessarily co-exists with the soul’s essence, because existence naturally follows the form. The same reason holds if the soul is supposed to be composed of some spiritual matter, as some maintain; because the said matter is not in potentiality to another form, as neither is the matter of a celestial body; otherwise the soul would be corruptible. Wherefore the soul cannot in any way be made of pre-existent matter.

Reply to Objection 2. The production of act from the potentiality of matter is nothing else but something becoming actually that previously was in potentiality. But since the rational soul does not depend in its existence on corporeal matter, and is subsistent, and exceeds the capacity of corporeal matter, as we have seen (q. 75, a. 2), it is not educed from the potentiality of matter.

Reply to Objection 3. As we have said, there is no comparison between the rational soul and other forms.

Objection 1. It would seem that the rational soul is not immediately made by God, but by the instrumentality of the angels. For spiritual things have more order than corporeal things. But inferior bodies are produced by means of the superior, as Dionysius says (*Div. Nom.* iv). Therefore also the inferior spirits, who are the rational souls, are produced by means of the superior spirits, the angels.

Objection 2. Further, the end corresponds to the beginning of things; for God is the beginning and end of all. Therefore the issue of things from their beginning corresponds to the forwarding of them to their end. But “inferior things are forwarded by the higher,” as Dionysius says (*Eccl. Hier.* v); therefore also the inferior are produced into existence by the higher, and souls by angels.

Objection 3. Further, “perfect is that which can produce its like,” as is stated *Metaph.* v. But spiritual substances are much more perfect than corporeal. Therefore, since bodies produce their like in their own species, much more are angels able to produce something specifically inferior to themselves; and such is the rational soul.

On the contrary, It is written (*Gn.* 2:7) that God Himself “breathed into the face of man the breath of life.”

I answer that, Some have held that angels, acting by the power of God, produce rational souls. But this is quite impossible, and is against faith. For it has been proved that the rational soul cannot be produced except by creation. Now, God alone can create; for the first agent alone can act without presupposing the existence of anything; while the second cause always presupposes something derived from the first cause, as above explained (q. 75, a. 3): and every agent, that presupposes something to its act, acts by making a change therein. Therefore everything else acts by producing a change, whereas God alone acts by creation. Since, therefore, the rational soul cannot be produced by a change in matter, it cannot be produced, save immediately by God.

Thus the replies to the objections are clear. For that bodies produce their like or something inferior to themselves, and that the higher things lead forward the inferior—all these things are effected through a certain transmutation.

Objection 1. It would seem that the human soul was made before the body. For the work of creation preceded the work of distinction and adornment, as shown above (q. 66, a. 1; q. 70, a. 1). But the soul was made by creation; whereas the body was made at the end of the work of adornment. Therefore the soul of man was made before the body.

Objection 2. Further, the rational soul has more in common with the angels than with the brute animals. But angels were created before bodies, or at least, at the beginning with corporeal matter; whereas the body of man was formed on the sixth day, when also the animals were made. Therefore the soul of man was created before the body.

Objection 3. Further, the end is proportionate to the beginning. But in the end the soul outlasts the body. Therefore in the beginning it was created before the body.

On the contrary, The proper act is produced in its proper potentiality. Therefore since the soul is the proper act of the body, the soul was produced in the body.

I answer that, Origen (*Peri Archon* i, 7,8) held that not only the soul of the first man, but also the souls of all men were created at the same time as the angels, before their bodies: because he thought that all spiritual substances, whether souls or angels, are equal in their natural condition, and differ only by merit; so that some of them—namely, the souls of men or of heavenly bodies—are united to bodies while others remain in their different orders entirely free from matter. Of this opinion we have already spoken (q. 47, a. 2); and so we need say nothing about it here.

Augustine, however (*Gen. ad lit.* vii, 24), says that the soul of the first man was created at the same time as the angels, before the body, for another reason; because he supposes that the body of man, during the work of the six days, was produced, not actually, but only as to some “causal virtues”; which cannot be said of the soul, because neither was it made of any pre-existing corporeal or spiritual matter, nor could it be produced from any created virtue. Therefore it seems that the soul itself, during the work of the six days, when all things

were made, was created, together with the angels; and that afterwards, by its own will, was joined to the service of the body. But he does not say this by way of assertion; as his words prove. For he says (*Gen. ad lit.* vii, 29): “We may believe, if neither Scripture nor reason forbid, that man was made on the sixth day, in the sense that his body was created as to its causal virtue in the elements of the world, but that the soul was already created.”

Now this could be upheld by those who hold that the soul has of itself a complete species and nature, and that it is not united to the body as its form, but as its administrator. But if the soul is united to the body as its form, and is naturally a part of human nature, the above supposition is quite impossible. For it is clear that God made the first things in their perfect natural state, as their species required. Now the soul, as a part of human nature, has its natural perfection only as united to the body. Therefore it would have been unfitting for the soul to be created without the body.

Therefore, if we admit the opinion of Augustine about the work of the six days (q. 74, a. 2), we may say that the human soul preceded in the work of the six days by a certain generic similitude, so far as it has intellectual nature in common with the angels; but was itself created at the same time as the body. According to the other saints, both the body and soul of the first man were produced in the work of the six days.

Reply to Objection 1. If the soul by its nature were a complete species, so that it might be created as to itself, this reason would prove that the soul was created by itself in the beginning. But as the soul is naturally the form of the body, it was necessarily created, not separately, but in the body.

Reply to Objection 2. The same observation applies to the second objection. For if the soul had a species of itself it would have something still more in common with the angels. But, as the form of the body, it belongs to the animal genus, as a formal principle.

Reply to Objection 3. That the soul remains after the body, is due to a defect of the body, namely, death. Which defect was not due when the soul was first created.

FIRST PART, QUESTION 91

The Production of the First Man's Body (In Four Articles)

We have now to consider the production of the first man's body. Under this head there are four points of inquiry:

- (1) The matter from which it was produced;
- (2) The author by whom it was produced;
- (3) The disposition it received in its production;
- (4) The mode and order of its production.

Whether the body of the first man was made of the slime of the earth?

Ia q. 91 a. 1

Objection 1. It would seem that the body of the first man was not made of the slime of the earth. For it is an act of greater power to make something out of nothing than out of something; because "not being" is farther off from actual existence than "being in potentiality." But since man is the most honorable of God's lower creatures, it was fitting that in the production of man's body, the power of God should be most clearly shown. Therefore it should not have been made of the slime of the earth, but out of nothing.

Objection 2. Further, the heavenly bodies are nobler than earthly bodies. But the human body has the greatest nobility; since it is perfected by the noblest form, which is the rational soul. Therefore it should not be made of an earthly body, but of a heavenly body.

Objection 3. Further, fire and air are nobler than earth and water, as is clear from their subtlety. Therefore, since the human body is most noble, it should rather have been made of fire and air than of the slime of the earth.

Objection 4. Further, the human body is composed of the four elements. Therefore it was not made of the slime of the earth, but of the four elements.

On the contrary, It is written (Gn. 2:7): "God made man of the slime of the earth."

I answer that, As God is perfect in His works, He bestowed perfection on all of them according to their capacity: "God's works are perfect" (Dt. 32:4). He Himself is simply perfect by the fact that "all things are pre-contained" in Him, not as component parts, but as "united in one simple whole," as Dionysius says (Div. Nom. v); in the same way as various effects pre-exist in their cause, according to its one virtue. This perfection is bestowed on the angels, inasmuch as all things which are produced by God in nature through various forms come under their knowledge. But on man this perfection is bestowed in an inferior way. For he does not possess a natural knowledge of all natural things, but is in a manner composed of all things, since he has in himself a rational soul of the genus of spiritual substances, and in likeness to the heavenly bodies he is removed from contraries by an equable temperament. As to the elements, he has them in their very substance, yet

in such a way that the higher elements, fire and air, predominate in him by their power; for life is mostly found where there is heat, which is from fire; and where there is humor, which is of the air. But the inferior elements abound in man by their substance; otherwise the mingling of elements would not be evenly balanced, unless the inferior elements, which have the less power, predominated in quantity. Therefore the body of man is said to have been formed from the slime of the earth; because earth and water mingled are called slime, and for this reason man is called 'a little world,' because all creatures of the world are in a way to be found in him.

Reply to Objection 1. The power of the Divine Creator was manifested in man's body when its matter was produced by creation. But it was fitting that the human body should be made of the four elements, that man might have something in common with the inferior bodies, as being something between spiritual and corporeal substances.

Reply to Objection 2. Although the heavenly body is in itself nobler than the earthly body, yet for the acts of the rational soul the heavenly body is less adapted. For the rational soul receives the knowledge of truth in a certain way through the senses, the organs of which cannot be formed of a heavenly body which is impassible. Nor is it true that something of the fifth essence enters materially into the composition of the human body, as some say, who suppose that the soul is united to the body by means of light. For, first of all, what they say is false—that light is a body. Secondly, it is impossible for something to be taken from the fifth essence, or from a heavenly body, and to be mingled with the elements, since a heavenly body is impassible; wherefore it does not enter into the composition of mixed bodies, except as in the effects of its power.

Reply to Objection 3. If fire and air, whose action is of greater power, predominated also in quantity in the human body, they would entirely draw the rest into themselves, and there would be no equality in the mingling, such as is required in the composition of man, for the sense of touch, which is the foundation of the other senses. For the organ of any particular sense must not actually have the contraries of which that sense

has the perception, but only potentially; either in such a way that it is entirely void of the whole “genus” of such contraries—thus, for instance, the pupil of the eye is without color, so as to be in potentiality as regards all colors; which is not possible in the organ of touch, since it is composed of the very elements, the qualities of which are perceived by that sense—or so that the organ is a medium between two contraries, as much needs be the case with regard to touch; for the medium is in

potentiality to the extremes.

Reply to Objection 4. In the slime of the earth are earth, and water binding the earth together. Of the other elements, Scripture makes no mention, because they are less in quantity in the human body, as we have said; and because also in the account of the Creation no mention is made of fire and air, which are not perceived by senses of uncultured men such as those to whom the Scripture was immediately addressed.

Whether the human body was immediately produced by God?

Ia q. 91 a. 2

Objection 1. It would seem that the human body was not produced by God immediately. For Augustine says (*De Trin.* iii, 4), that “corporeal things are disposed by God through the angels.” But the human body was made of corporeal matter, as stated above (a. 1). Therefore it was produced by the instrumentality of the angels, and not immediately by God.

Objection 2. Further, whatever can be made by a created power, is not necessarily produced immediately by God. But the human body can be produced by the created power of a heavenly body; for even certain animals are produced from putrefaction by the active power of a heavenly body; and Albumazar says that man is not generated where heat and cold are extreme, but only in temperate regions. Therefore the human body was not necessarily produced immediately by God.

Objection 3. Further, nothing is made of corporeal matter except by some material change. But all corporeal change is caused by a movement of a heavenly body, which is the first movement. Therefore, since the human body was produced from corporeal matter, it seems that a heavenly body had part in its production.

Objection 4. Further, Augustine says (*Gen.* ad lit. vii, 24) that man’s body was made during the work of the six days, according to the causal virtues which God inserted in corporeal creatures; and that afterwards it was actually produced. But what pre-exists in the corporeal creature by reason of causal virtues can be produced by some corporeal body. Therefore the human body was produced by some created power, and not immediately by God.

On the contrary, It is written (*Ecclus.* 17:1): “God created man out of the earth.”

I answer that, The first formation of the human body could not be by the instrumentality of any created power, but was immediately from God. Some, indeed, supposed that the forms which are in corporeal matter are derived from some immaterial forms; but the Philosopher refutes this opinion (*Metaph.* vii), for the reason that forms cannot be made in themselves, but only in the composite, as we have explained (q. 65, a. 4); and because the agent must be like its effect, it is not fitting that a pure form, not existing in matter, should produce a form which is in matter, and which form is only made by the fact that the composite is made. So a

form which is in matter can only be the cause of another form that is in matter, according as composite is made by composite. Now God, though He is absolutely immaterial, can alone by His own power produce matter by creation: wherefore He alone can produce a form in matter, without the aid of any preceding material form. For this reason the angels cannot transform a body except by making use of something in the nature of a seed, as Augustine says (*De Trin.* iii, 19). Therefore as no pre-existing body has been formed whereby another body of the same species could be generated, the first human body was of necessity made immediately by God.

Reply to Objection 1. Although the angels are the ministers of God, as regards what He does in bodies, yet God does something in bodies beyond the angels’ power, as, for instance, raising the dead, or giving sight to the blind: and by this power He formed the body of the first man from the slime of the earth. Nevertheless the angels could act as ministers in the formation of the body of the first man, in the same way as they will do at the last resurrection by collecting the dust.

Reply to Objection 2. Perfect animals, produced from seed, cannot be made by the sole power of a heavenly body, as Avicenna imagined; although the power of a heavenly body may assist by co-operation in the work of natural generation, as the Philosopher says (*Phys.* ii, 26), “man and the sun beget man from matter.” For this reason, a place of moderate temperature is required for the production of man and other animals. But the power of heavenly bodies suffices for the production of some imperfect animals from properly disposed matter: for it is clear that more conditions are required to produce a perfect than an imperfect thing.

Reply to Objection 3. The movement of the heavens causes natural changes; but not changes that surpass the order of nature, and are caused by the Divine Power alone, as for the dead to be raised to life, or the blind to see: like to which also is the making of man from the slime of the earth.

Reply to Objection 4. An effect may be said to pre-exist in the causal virtues of creatures, in two ways. First, both in active and in passive potentiality, so that not only can it be produced out of pre-existing matter, but also that some pre-existing creature can produce it.

Secondly, in passive potentiality only; that is, that out of pre-existing matter it can be produced by God. In

this sense, according to Augustine, the human body pre-existed in the previous work in their causal virtues.

Whether the body of man was given an apt disposition?

Ia q. 91 a. 3

Objection 1. It would seem that the body of man was not given an apt disposition. For since man is the noblest of animals, his body ought to be the best disposed in what is proper to an animal, that is, in sense and movement. But some animals have sharper senses and quicker movement than man; thus dogs have a keener smell, and birds a swifter flight. Therefore man's body was not aptly disposed.

Objection 2. Further, perfect is what lacks nothing. But the human body lacks more than the body of other animals, for these are provided with covering and natural arms of defense, in which man is lacking. Therefore the human body is very imperfectly disposed.

Objection 3. Further, man is more distant from plants than he is from the brutes. But plants are erect in stature, while brutes are prone in stature. Therefore man should not be of erect stature.

On the contrary, It is written (Eccles. 7:30): "God made man right."

I answer that, All natural things were produced by the Divine art, and so may be called God's works of art. Now every artist intends to give to his work the best disposition; not absolutely the best, but the best as regards the proposed end; and even if this entails some defect, the artist cares not: thus, for instance, when man makes himself a saw for the purpose of cutting, he makes it of iron, which is suitable for the object in view; and he does not prefer to make it of glass, though this be a more beautiful material, because this very beauty would be an obstacle to the end he has in view. Therefore God gave to each natural being the best disposition; not absolutely so, but in the view of its proper end. This is what the Philosopher says (Phys. ii, 7): "And because it is better so, not absolutely, but for each one's substance."

Now the proximate end of the human body is the rational soul and its operations; since matter is for the sake of the form, and instruments are for the action of the agent. I say, therefore, that God fashioned the human body in that disposition which was best, as most suited to such a form and to such operations. If defect exists in the disposition of the human body, it is well to observe that such defect arises as a necessary result of the matter, from the conditions required in the body, in order to make it suitably proportioned to the soul and its operations.

Reply to Objection 1. The sense of touch, which is the foundation of the other senses, is more perfect in man than in any other animal; and for this reason man must have the most equable temperament of all animals. Moreover man excels all other animals in the interior sensitive powers, as is clear from what we have said above (q. 78, a. 4). But by a kind of necessity,

man falls short of the other animals in some of the exterior senses; thus of all animals he has the least sense of smell. For man needs the largest brain as compared to the body; both for his greater freedom of action in the interior powers required for the intellectual operations, as we have seen above (q. 84, a. 7); and in order that the low temperature of the brain may modify the heat of the heart, which has to be considerable in man for him to be able to stand erect. So that size of the brain, by reason of its humidity, is an impediment to the smell, which requires dryness. In the same way, we may suggest a reason why some animals have a keener sight, and a more acute hearing than man; namely, on account of a hindrance to his senses arising necessarily from the perfect equability of his temperament. The same reason suffices to explain why some animals are more rapid in movement than man, since this excellence of speed is inconsistent with the equability of the human temperament.

Reply to Objection 2. Horns and claws, which are the weapons of some animals, and toughness of hide and quantity of hair or feathers, which are the clothing of animals, are signs of an abundance of the earthly element; which does not agree with the equability and softness of the human temperament. Therefore such things do not suit the nature of man. Instead of these, he has reason and hands whereby he can make himself arms and clothes, and other necessities of life, of infinite variety. Wherefore the hand is called by Aristotle (De Anima iii, 8), "the organ of organs." Moreover this was more becoming to the rational nature, which is capable of conceiving an infinite number of things, so as to make for itself an infinite number of instruments.

Reply to Objection 3. An upright stature was becoming to man for four reasons. First, because the senses are given to man, not only for the purpose of procuring the necessities of life, which they are bestowed on other animals, but also for the purpose of knowledge. Hence, whereas the other animals take delight in the objects of the senses only as ordered to food and sex, man alone takes pleasure in the beauty of sensible objects for its own sake. Therefore, as the senses are situated chiefly in the face, other animals have the face turned to the ground, as it were for the purpose of seeking food and procuring a livelihood; whereas man has his face erect, in order that by the senses, and chiefly by sight, which is more subtle and penetrates further into the differences of things, he may freely survey the sensible objects around him, both heavenly and earthly, so as to gather intelligible truth from all things. Secondly, for the greater freedom of the acts of the interior powers; the brain, wherein these actions are, in a way, per-

formed, not being low down, but lifted up above other parts of the body. Thirdly, because if man's stature were prone to the ground he would need to use his hands as fore-feet; and thus their utility for other purposes would cease. Fourthly, because if man's stature were prone to the ground, and he used his hands as fore-feet, he would be obliged to take hold of his food with his mouth. Thus he would have a protruding mouth, with thick and hard lips, and also a hard tongue, so as to keep it from being hurt by exterior things; as we see in other animals. Moreover, such an attitude would quite hinder speech, which is reason's proper operation.

Nevertheless, though of erect stature, man is far above plants. For man's superior part, his head, is turned towards the superior part of the world, and his inferior part is turned towards the inferior world; and therefore he is perfectly disposed as to the general situation of his body. Plants have the superior part turned towards the lower world, since their roots correspond to the mouth; and their inferior part towards the upper world. But brute animals have a middle disposition, for the superior part of the animal is that by which it takes food, and the inferior part that by which it rids itself of the surplus.

Whether the production of the human body is fittingly described in Scripture?

Ia q. 91 a. 4

Objection 1. It would seem that the production of the human body is not fittingly described in Scripture. For, as the human body was made by God, so also were the other works of the six days. But in the other works it is written, "God said; Let it be made, and it was made." Therefore the same should have been said of man.

Objection 2. Further, the human body was made by God immediately, as explained above (a. 2). Therefore it was not fittingly said, "Let us make man."

Objection 3. Further, the form of the human body is the soul itself which is the breath of life. Therefore, having said, "God made man of the slime of the earth," he should not have added: "And He breathed into him the breath of life."

Objection 4. Further, the soul, which is the breath of life, is in the whole body, and chiefly in the heart. Therefore it was not fittingly said: "He breathed into his face the breath of life."

Objection 5. Further, the male and female sex belong to the body, while the image of God belongs to the soul. But the soul, according to Augustine (Gen. ad lit. vii, 24), was made before the body. Therefore having said: "To His image He made them," he should not have added, "male and female He created them."

On the contrary, Is the authority of Scripture.

Reply to Objection 1. As Augustine observes (Gen. ad lit. vi, 12), man surpasses other things, not in the fact that God Himself made man, as though He did not make other things; since it is written (Ps. 101:26), "The work of Thy hands is the heaven," and elsewhere (Ps. 94:5), "His hands laid down the dry land"; but in this, that man is made to God's image. Yet in describing man's production, Scripture uses a special way of speaking, to show that other things were made for man's sake. For we are accustomed to do with more deliberation and care what we have chiefly in mind.

Reply to Objection 2. We must not imagine that when God said "Let us make man," He spoke to the angels, as some were perverse enough to think. But by

these words is signified the plurality of the Divine Person, Whose image is more clearly expressed in man.

Reply to Objection 3. Some have thought that man's body was formed first in priority of time, and that afterwards the soul was infused into the formed body. But it is inconsistent with the perfection of the production of things, that God should have made either the body without the soul, or the soul without the body, since each is a part of human nature. This is especially unfitting as regards the body, for the body depends on the soul, and not the soul on the body.

To remove the difficulty some have said that the words, "God made man," must be understood of the production of the body with the soul; and that the subsequent words, "and He breathed into his face the breath of life," should be understood of the Holy Ghost; as the Lord breathed on His Apostles, saying, "Receive ye the Holy Ghost" (Jn. 20:22). But this explanation, as Augustine says (De Civ. Dei xiii, 24), is excluded by the very words of Scripture. For we read farther on, "And man was made a living soul"; which words the Apostle (1 Cor. 15:45) refers not to spiritual life, but to animal life. Therefore, by breath of life we must understand the soul, so that the words, "He breathed into his face the breath of life," are a sort of exposition of what goes before; for the soul is the form of the body.

Reply to Objection 4. Since vital operations are more clearly seen in man's face, on account of the senses which are there expressed; therefore Scripture says that the breath of life was breathed into man's face.

Reply to Objection 5. According to Augustine (Gen. ad lit. iv, 34), the works of the six days were done all at one time; wherefore according to him man's soul, which he holds to have been made with the angels, was not made before the sixth day; but on the sixth day both the soul of the first man was made actually, and his body in its causal elements. But other doctors hold that on the sixth day both body and soul of man were actually made.

Objection 1. It would seem that the body of the first man was not made of the slime of the earth. For it is an act of greater power to make something out of nothing than out of something; because “not being” is farther off from actual existence than “being in potentiality.” But since man is the most honorable of God’s lower creatures, it was fitting that in the production of man’s body, the power of God should be most clearly shown. Therefore it should not have been made of the slime of the earth, but out of nothing.

Objection 2. Further, the heavenly bodies are nobler than earthly bodies. But the human body has the greatest nobility; since it is perfected by the noblest form, which is the rational soul. Therefore it should not be made of an earthly body, but of a heavenly body.

Objection 3. Further, fire and air are nobler than earth and water, as is clear from their subtlety. Therefore, since the human body is most noble, it should rather have been made of fire and air than of the slime of the earth.

Objection 4. Further, the human body is composed of the four elements. Therefore it was not made of the slime of the earth, but of the four elements.

On the contrary, It is written (Gn. 2:7): “God made man of the slime of the earth.”

I answer that, As God is perfect in His works, He bestowed perfection on all of them according to their capacity: “God’s works are perfect” (Dt. 32:4). He Himself is simply perfect by the fact that “all things are pre-contained” in Him, not as component parts, but as “united in one simple whole,” as Dionysius says (Div. Nom. v); in the same way as various effects pre-exist in their cause, according to its one virtue. This perfection is bestowed on the angels, inasmuch as all things which are produced by God in nature through various forms come under their knowledge. But on man this perfection is bestowed in an inferior way. For he does not possess a natural knowledge of all natural things, but is in a manner composed of all things, since he has in himself a rational soul of the genus of spiritual substances, and in likeness to the heavenly bodies he is removed from contraries by an equable temperament. As to the elements, he has them in their very substance, yet in such a way that the higher elements, fire and air, predominate in him by their power; for life is mostly found where there is heat, which is from fire; and where there is humor, which is of the air. But the inferior elements abound in man by their substance; otherwise the mingling of elements would not be evenly balanced, unless the inferior elements, which have the less power, predominated in quantity. Therefore the body of man is said to have been formed from the slime of the earth;

because earth and water mingled are called slime, and for this reason man is called ‘a little world,’ because all creatures of the world are in a way to be found in him.

Reply to Objection 1. The power of the Divine Creator was manifested in man’s body when its matter was produced by creation. But it was fitting that the human body should be made of the four elements, that man might have something in common with the inferior bodies, as being something between spiritual and corporeal substances.

Reply to Objection 2. Although the heavenly body is in itself nobler than the earthly body, yet for the acts of the rational soul the heavenly body is less adapted. For the rational soul receives the knowledge of truth in a certain way through the senses, the organs of which cannot be formed of a heavenly body which is impassible. Nor is it true that something of the fifth essence enters materially into the composition of the human body, as some say, who suppose that the soul is united to the body by means of light. For, first of all, what they say is false—that light is a body. Secondly, it is impossible for something to be taken from the fifth essence, or from a heavenly body, and to be mingled with the elements, since a heavenly body is impassible; wherefore it does not enter into the composition of mixed bodies, except as in the effects of its power.

Reply to Objection 3. If fire and air, whose action is of greater power, predominated also in quantity in the human body, they would entirely draw the rest into themselves, and there would be no equality in the mingling, such as is required in the composition of man, for the sense of touch, which is the foundation of the other senses. For the organ of any particular sense must not actually have the contraries of which that sense has the perception, but only potentially; either in such a way that it is entirely void of the whole “genus” of such contraries—thus, for instance, the pupil of the eye is without color, so as to be in potentiality as regards all colors; which is not possible in the organ of touch, since it is composed of the very elements, the qualities of which are perceived by that sense—or so that the organ is a medium between two contraries, as much needs be the case with regard to touch; for the medium is in potentiality to the extremes.

Reply to Objection 4. In the slime of the earth are earth, and water binding the earth together. Of the other elements, Scripture makes no mention, because they are less in quantity in the human body, as we have said; and because also in the account of the Creation no mention is made of fire and air, which are not perceived by senses of uncultured men such as those to whom the Scripture was immediately addressed.

Objection 1. It would seem that the human body was not produced by God immediately. For Augustine says (*De Trin.* iii, 4), that “corporeal things are disposed by God through the angels.” But the human body was made of corporeal matter, as stated above (a. 1). Therefore it was produced by the instrumentality of the angels, and not immediately by God.

Objection 2. Further, whatever can be made by a created power, is not necessarily produced immediately by God. But the human body can be produced by the created power of a heavenly body; for even certain animals are produced from putrefaction by the active power of a heavenly body; and Albumazar says that man is not generated where heat and cold are extreme, but only in temperate regions. Therefore the human body was not necessarily produced immediately by God.

Objection 3. Further, nothing is made of corporeal matter except by some material change. But all corporeal change is caused by a movement of a heavenly body, which is the first movement. Therefore, since the human body was produced from corporeal matter, it seems that a heavenly body had part in its production.

Objection 4. Further, Augustine says (*Gen.* ad lit. vii, 24) that man’s body was made during the work of the six days, according to the causal virtues which God inserted in corporeal creatures; and that afterwards it was actually produced. But what pre-exists in the corporeal creature by reason of causal virtues can be produced by some corporeal body. Therefore the human body was produced by some created power, and not immediately by God.

On the contrary, It is written (*Ecclus.* 17:1): “God created man out of the earth.”

I answer that, The first formation of the human body could not be by the instrumentality of any created power, but was immediately from God. Some, indeed, supposed that the forms which are in corporeal matter are derived from some immaterial forms; but the Philosopher refutes this opinion (*Metaph.* vii), for the reason that forms cannot be made in themselves, but only in the composite, as we have explained (q. 65, a. 4); and because the agent must be like its effect, it is not fitting that a pure form, not existing in matter, should produce a form which is in matter, and which form is only made by the fact that the composite is made. So a form which is in matter can only be the cause of another form that is in matter, according as composite is made

by composite. Now God, though He is absolutely immaterial, can alone by His own power produce matter by creation: wherefore He alone can produce a form in matter, without the aid of any preceding material form. For this reason the angels cannot transform a body except by making use of something in the nature of a seed, as Augustine says (*De Trin.* iii, 19). Therefore as no pre-existing body has been formed whereby another body of the same species could be generated, the first human body was of necessity made immediately by God.

Reply to Objection 1. Although the angels are the ministers of God, as regards what He does in bodies, yet God does something in bodies beyond the angels’ power, as, for instance, raising the dead, or giving sight to the blind: and by this power He formed the body of the first man from the slime of the earth. Nevertheless the angels could act as ministers in the formation of the body of the first man, in the same way as they will do at the last resurrection by collecting the dust.

Reply to Objection 2. Perfect animals, produced from seed, cannot be made by the sole power of a heavenly body, as Avicenna imagined; although the power of a heavenly body may assist by co-operation in the work of natural generation, as the Philosopher says (*Phys.* ii, 26), “man and the sun beget man from matter.” For this reason, a place of moderate temperature is required for the production of man and other animals. But the power of heavenly bodies suffices for the production of some imperfect animals from properly disposed matter: for it is clear that more conditions are required to produce a perfect than an imperfect thing.

Reply to Objection 3. The movement of the heavens causes natural changes; but not changes that surpass the order of nature, and are caused by the Divine Power alone, as for the dead to be raised to life, or the blind to see: like to which also is the making of man from the slime of the earth.

Reply to Objection 4. An effect may be said to pre-exist in the causal virtues of creatures, in two ways. First, both in active and in passive potentiality, so that not only can it be produced out of pre-existing matter, but also that some pre-existing creature can produce it. Secondly, in passive potentiality only; that is, that out of pre-existing matter it can be produced by God. In this sense, according to Augustine, the human body pre-existed in the previous work in their causal virtues.

Objection 1. It would seem that the body of man was not given an apt disposition. For since man is the noblest of animals, his body ought to be the best disposed in what is proper to an animal, that is, in sense and movement. But some animals have sharper senses and quicker movement than man; thus dogs have a keener smell, and birds a swifter flight. Therefore man's body was not aptly disposed.

Objection 2. Further, perfect is what lacks nothing. But the human body lacks more than the body of other animals, for these are provided with covering and natural arms of defense, in which man is lacking. Therefore the human body is very imperfectly disposed.

Objection 3. Further, man is more distant from plants than he is from the brutes. But plants are erect in stature, while brutes are prone in stature. Therefore man should not be of erect stature.

On the contrary, It is written (Eccles. 7:30): "God made man right."

I answer that, All natural things were produced by the Divine art, and so may be called God's works of art. Now every artist intends to give to his work the best disposition; not absolutely the best, but the best as regards the proposed end; and even if this entails some defect, the artist cares not: thus, for instance, when man makes himself a saw for the purpose of cutting, he makes it of iron, which is suitable for the object in view; and he does not prefer to make it of glass, though this be a more beautiful material, because this very beauty would be an obstacle to the end he has in view. Therefore God gave to each natural being the best disposition; not absolutely so, but in the view of its proper end. This is what the Philosopher says (Phys. ii, 7): "And because it is better so, not absolutely, but for each one's substance."

Now the proximate end of the human body is the rational soul and its operations; since matter is for the sake of the form, and instruments are for the action of the agent. I say, therefore, that God fashioned the human body in that disposition which was best, as most suited to such a form and to such operations. If defect exists in the disposition of the human body, it is well to observe that such defect arises as a necessary result of the matter, from the conditions required in the body, in order to make it suitably proportioned to the soul and its operations.

Reply to Objection 1. The sense of touch, which is the foundation of the other senses, is more perfect in man than in any other animal; and for this reason man must have the most equable temperament of all animals. Moreover man excels all other animals in the interior sensitive powers, as is clear from what we have said above (q. 78, a. 4). But by a kind of necessity, man falls short of the other animals in some of the exterior senses; thus of all animals he has the least sense of smell. For man needs the largest brain as compared to the body; both for his greater freedom of action in the

interior powers required for the intellectual operations, as we have seen above (q. 84, a. 7); and in order that the low temperature of the brain may modify the heat of the heart, which has to be considerable in man for him to be able to stand erect. So that size of the brain, by reason of its humidity, is an impediment to the smell, which requires dryness. In the same way, we may suggest a reason why some animals have a keener sight, and a more acute hearing than man; namely, on account of a hindrance to his senses arising necessarily from the perfect equability of his temperament. The same reason suffices to explain why some animals are more rapid in movement than man, since this excellence of speed is inconsistent with the equability of the human temperament.

Reply to Objection 2. Horns and claws, which are the weapons of some animals, and toughness of hide and quantity of hair or feathers, which are the clothing of animals, are signs of an abundance of the earthly element; which does not agree with the equability and softness of the human temperament. Therefore such things do not suit the nature of man. Instead of these, he has reason and hands whereby he can make himself arms and clothes, and other necessities of life, of infinite variety. Wherefore the hand is called by Aristotle (De Anima iii, 8), "the organ of organs." Moreover this was more becoming to the rational nature, which is capable of conceiving an infinite number of things, so as to make for itself an infinite number of instruments.

Reply to Objection 3. An upright stature was becoming to man for four reasons. First, because the senses are given to man, not only for the purpose of procuring the necessities of life, which they are bestowed on other animals, but also for the purpose of knowledge. Hence, whereas the other animals take delight in the objects of the senses only as ordered to food and sex, man alone takes pleasure in the beauty of sensible objects for its own sake. Therefore, as the senses are situated chiefly in the face, other animals have the face turned to the ground, as it were for the purpose of seeking food and procuring a livelihood; whereas man has his face erect, in order that by the senses, and chiefly by sight, which is more subtle and penetrates further into the differences of things, he may freely survey the sensible objects around him, both heavenly and earthly, so as to gather intelligible truth from all things. Secondly, for the greater freedom of the acts of the interior powers; the brain, wherein these actions are, in a way, performed, not being low down, but lifted up above other parts of the body. Thirdly, because if man's stature were prone to the ground he would need to use his hands as fore-feet; and thus their utility for other purposes would cease. Fourthly, because if man's stature were prone to the ground, and he used his hands as fore-feet, he would be obliged to take hold of his food with his mouth. Thus he would have a protruding mouth, with thick and hard

lips, and also a hard tongue, so as to keep it from being hurt by exterior things; as we see in other animals. Moreover, such an attitude would quite hinder speech, which is reason's proper operation.

Nevertheless, though of erect stature, man is far above plants. For man's superior part, his head, is turned towards the superior part of the world, and his inferior part is turned towards the inferior world; and

therefore he is perfectly disposed as to the general situation of his body. Plants have the superior part turned towards the lower world, since their roots correspond to the mouth; and their inferior part towards the upper world. But brute animals have a middle disposition, for the superior part of the animal is that by which it takes food, and the inferior part that by which it rids itself of the surplus.

Objection 1. It would seem that the production of the human body is not fittingly described in Scripture. For, as the human body was made by God, so also were the other works of the six days. But in the other works it is written, “God said; Let it be made, and it was made.” Therefore the same should have been said of man.

Objection 2. Further, the human body was made by God immediately, as explained above (a. 2). Therefore it was not fittingly said, “Let us make man.”

Objection 3. Further, the form of the human body is the soul itself which is the breath of life. Therefore, having said, “God made man of the slime of the earth,” he should not have added: “And He breathed into him the breath of life.”

Objection 4. Further, the soul, which is the breath of life, is in the whole body, and chiefly in the heart. Therefore it was not fittingly said: “He breathed into his face the breath of life.”

Objection 5. Further, the male and female sex belong to the body, while the image of God belongs to the soul. But the soul, according to Augustine (Gen. ad lit. vii, 24), was made before the body. Therefore having said: “To His image He made them,” he should not have added, “male and female He created them.”

On the contrary, Is the authority of Scripture.

Reply to Objection 1. As Augustine observes (Gen. ad lit. vi, 12), man surpasses other things, not in the fact that God Himself made man, as though He did not make other things; since it is written (Ps. 101:26), “The work of Thy hands is the heaven,” and elsewhere (Ps. 94:5), “His hands laid down the dry land”; but in this, that man is made to God’s image. Yet in describing man’s production, Scripture uses a special way of speaking, to show that other things were made for man’s sake. For we are accustomed to do with more deliberation and care what we have chiefly in mind.

Reply to Objection 2. We must not imagine that when God said “Let us make man,” He spoke to the angels, as some were perverse enough to think. But by

these words is signified the plurality of the Divine Person, Whose image is more clearly expressed in man.

Reply to Objection 3. Some have thought that man’s body was formed first in priority of time, and that afterwards the soul was infused into the formed body. But it is inconsistent with the perfection of the production of things, that God should have made either the body without the soul, or the soul without the body, since each is a part of human nature. This is especially unfitting as regards the body, for the body depends on the soul, and not the soul on the body.

To remove the difficulty some have said that the words, “God made man,” must be understood of the production of the body with the soul; and that the subsequent words, “and He breathed into his face the breath of life,” should be understood of the Holy Ghost; as the Lord breathed on His Apostles, saying, “Receive ye the Holy Ghost” (Jn. 20:22). But this explanation, as Augustine says (De Civ. Dei xiii, 24), is excluded by the very words of Scripture. For we read farther on, “And man was made a living soul”; which words the Apostle (1 Cor. 15:45) refers not to spiritual life, but to animal life. Therefore, by breath of life we must understand the soul, so that the words, “He breathed into his face the breath of life,” are a sort of exposition of what goes before; for the soul is the form of the body.

Reply to Objection 4. Since vital operations are more clearly seen in man’s face, on account of the senses which are there expressed; therefore Scripture says that the breath of life was breathed into man’s face.

Reply to Objection 5. According to Augustine (Gen. ad lit. iv, 34), the works of the six days were done all at one time; wherefore according to him man’s soul, which he holds to have been made with the angels, was not made before the sixth day; but on the sixth day both the soul of the first man was made actually, and his body in its causal elements. But other doctors hold that on the sixth day both body and soul of man were actually made.

FIRST PART, QUESTION 92

The Production of the Woman (In Four Articles)

We must next consider the production of the woman. Under this head there are four points of inquiry:

- (1) Whether the woman should have been made in that first production of things?
- (2) Whether the woman should have been made from man?
- (3) Whether of man's rib?
- (4) Whether the woman was made immediately by God?

Whether the woman should have been made in the first production of things?

Ia q. 92 a. 1

Objection 1. It would seem that the woman should not have been made in the first production of things. For the Philosopher says (De Gener. ii, 3), that "the female is a misbegotten male." But nothing misbegotten or defective should have been in the first production of things. Therefore woman should not have been made at that first production.

Objection 2. Further, subjection and limitation were a result of sin, for to the woman was it said after sin (Gn. 3:16): "Thou shalt be under the man's power"; and Gregory says that, "Where there is no sin, there is no inequality." But woman is naturally of less strength and dignity than man; "for the agent is always more honorable than the patient," as Augustine says (Gen. ad lit. xii, 16). Therefore woman should not have been made in the first production of things before sin.

Objection 3. Further, occasions of sin should be cut off. But God foresaw that the woman would be an occasion of sin to man. Therefore He should not have made woman.

On the contrary, It is written (Gn. 2:18): "It is not good for man to be alone; let us make him a helper like to himself."

I answer that, It was necessary for woman to be made, as the Scripture says, as a "helper" to man; not, indeed, as a helpmate in other works, as some say, since man can be more efficiently helped by another man in other works; but as a helper in the work of generation. This can be made clear if we observe the mode of generation carried out in various living things. Some living things do not possess in themselves the power of generation, but are generated by some other specific agent, such as some plants and animals by the influence of the heavenly bodies, from some fitting matter and not from seed: others possess the active and passive generative power together; as we see in plants which are generated from seed; for the noblest vital function in plants is generation. Wherefore we observe that in these the active power of generation invariably accompanies the passive power. Among perfect animals the active power of generation belongs to the male sex, and the passive power to the female. And as among animals there is a vital operation nobler than generation, to which their life is principally directed; therefore the male sex is not found in

continual union with the female in perfect animals, but only at the time of coition; so that we may consider that by this means the male and female are one, as in plants they are always united; although in some cases one of them preponderates, and in some the other. But man is yet further ordered to a still nobler vital action, and that is intellectual operation. Therefore there was greater reason for the distinction of these two forces in man; so that the female should be produced separately from the male; although they are carnally united for generation. Therefore directly after the formation of woman, it was said: "And they shall be two in one flesh" (Gn. 2:24).

Reply to Objection 1. As regards the individual nature, woman is defective and misbegotten, for the active force in the male seed tends to the production of a perfect likeness in the masculine sex; while the production of woman comes from defect in the active force or from some material indisposition, or even from some external influence; such as that of a south wind, which is moist, as the Philosopher observes (De Gener. Animal. iv, 2). On the other hand, as regards human nature in general, woman is not misbegotten, but is included in nature's intention as directed to the work of generation. Now the general intention of nature depends on God, Who is the universal Author of nature. Therefore, in producing nature, God formed not only the male but also the female.

Reply to Objection 2. Subjection is twofold. One is servile, by virtue of which a superior makes use of a subject for his own benefit; and this kind of subjection began after sin. There is another kind of subjection which is called economic or civil, whereby the superior makes use of his subjects for their own benefit and good; and this kind of subjection existed even before sin. For good order would have been wanting in the human family if some were not governed by others wiser than themselves. So by such a kind of subjection woman is naturally subject to man, because in man the discretion of reason predominates. Nor is inequality among men excluded by the state of innocence, as we shall prove (q. 96, a. 3).

Reply to Objection 3. If God had deprived the world of all those things which proved an occasion of sin, the universe would have been imperfect. Nor was

it fitting for the common good to be destroyed in order that individual evil might be avoided; especially as God

is so powerful that He can direct any evil to a good end.

Whether woman should have been made from man?

Ia q. 92 a. 2

Objection 1. It would seem that woman should not have been made from man. For sex belongs both to man and animals. But in the other animals the female was not made from the male. Therefore neither should it have been so with man.

Objection 2. Further, things of the same species are of the same matter. But male and female are of the same species. Therefore, as man was made of the slime of the earth, so woman should have been made of the same, and not from man.

Objection 3. Further, woman was made to be a helpmate to man in the work of generation. But close relationship makes a person unfit for that office; hence near relations are debarred from intermarriage, as is written (Lev. 18:6). Therefore woman should not have been made from man.

On the contrary, It is written (Ecclus. 17:5): “He created of him,” that is, out of man, “a helpmate like to himself,” that is, woman.

I answer that, When all things were first formed, it was more suitable for the woman to be made from man than (for the female to be from the male) in other animals. First, in order thus to give the first man a certain dignity consisting in this, that as God is the principle of the whole universe, so the first man, in likeness to God, was the principle of the whole human race. Wherefore Paul says that “God made the whole human race from one” (Acts 17:26). Secondly, that man might love woman all the more, and cleave to her more closely, knowing her to be fashioned from himself. Hence it is written (Gn. 2:23,24): “She was taken out of man,

wherefore a man shall leave father and mother, and shall cleave to his wife.” This was most necessary as regards the human race, in which the male and female live together for life; which is not the case with other animals. Thirdly, because, as the Philosopher says (Ethic. viii, 12), the human male and female are united, not only for generation, as with other animals, but also for the purpose of domestic life, in which each has his or her particular duty, and in which the man is the head of the woman. Wherefore it was suitable for the woman to be made out of man, as out of her principle. Fourthly, there is a sacramental reason for this. For by this is signified that the Church takes her origin from Christ. Wherefore the Apostle says (Eph. 5:32): “This is a great sacrament; but I speak in Christ and in the Church.”

Reply obj. 1 is clear from the foregoing.

Reply to Objection 2. Matter is that from which something is made. Now created nature has a determinate principle; and since it is determined to one thing, it has also a determinate mode of proceeding. Wherefore from determinate matter it produces something in a determinate species. On the other hand, the Divine Power, being infinite, can produce things of the same species out of any matter, such as a man from the slime of the earth, and a woman from out of man.

Reply to Objection 3. A certain affinity arises from natural generation, and this is an impediment to matrimony. Woman, however, was not produced from man by natural generation, but by the Divine Power alone. Wherefore Eve is not called the daughter of Adam; and so this argument does not prove.

Whether the woman was fittingly made from the rib of man?

Ia q. 92 a. 3

Objection 1. It would seem that the woman should not have been formed from the rib of man. For the rib was much smaller than the woman’s body. Now from a smaller thing a larger thing can be made only—either by addition (and then the woman ought to have been described as made out of that which was added, rather than out of the rib itself)—or by rarefaction, because, as Augustine says (Gen. ad lit. x): “A body cannot increase in bulk except by rarefaction.” But the woman’s body is not more rarefied than man’s—at least, not in the proportion of a rib to Eve’s body. Therefore Eve was not formed from a rib of Adam.

Objection 2. Further, in those things which were first created there was nothing superfluous. Therefore a rib of Adam belonged to the integrity of his body. So, if a rib was removed, his body remained imperfect; which is unreasonable to suppose.

Objection 3. Further, a rib cannot be removed from

man without pain. But there was no pain before sin. Therefore it was not right for a rib to be taken from the man, that Eve might be made from it.

On the contrary, It is written (Gn. 2:22): “God built the rib, which He took from Adam, into a woman.”

I answer that, It was right for the woman to be made from a rib of man. First, to signify the social union of man and woman, for the woman should neither “use authority over man,” and so she was not made from his head; nor was it right for her to be subject to man’s contempt as his slave, and so she was not made from his feet. Secondly, for the sacramental signification; for from the side of Christ sleeping on the Cross the Sacraments flowed—namely, blood and water—on which the Church was established.

Reply to Objection 1. Some say that the woman’s body was formed by a material increase, without anything being added; in the same way as our Lord multi-

plied the five loaves. But this is quite impossible. For such an increase of matter would either be by a change of the very substance of the matter itself, or by a change of its dimensions. Not by change of the substance of the matter, both because matter, considered in itself, is quite unchangeable, since it has a potential existence, and has nothing but the nature of a subject, and because quantity and size are extraneous to the essence of matter itself. Wherefore multiplication of matter is quite unintelligible, as long as the matter itself remains the same without anything added to it; unless it receives greater dimensions. This implies rarefaction, which is for the same matter to receive greater dimensions, as the Philosopher says (Phys. iv). To say, therefore, that the same matter is enlarged, without being rarefied, is to combine contradictories —viz. the definition with the absence of the thing defined.

Wherefore, as no rarefaction is apparent in such multiplication of matter, we must admit an addition of

matter: either by creation, or which is more probable, by conversion. Hence Augustine says (Tract. xxiv in Joan.) that “Christ filled five thousand men with five loaves, in the same way as from a few seeds He produces the harvest of corn”—that is, by transformation of the nourishment. Nevertheless, we say that the crowds were fed with five loaves, or that woman was made from the rib, because an addition was made to the already existing matter of the loaves and of the rib.

Reply to Objection 2. The rib belonged to the integral perfection of Adam, not as an individual, but as the principle of the human race; just as the semen belongs to the perfection of the begetter, and is released by a natural and pleasurable operation. Much more, therefore, was it possible that by the Divine power the body of the woman should be produced from the man’s rib.

From this it is clear how to answer the third objection.

Whether the woman was formed immediately by God?

Ia q. 92 a. 4

Objection 1. It would seem that the woman was not formed immediately by God. For no individual is produced immediately by God from another individual alike in species. But the woman was made from a man who is of the same species. Therefore she was not made immediately by God.

Objection 2. Further, Augustine (De Trin. iii, 4) says that corporeal things are governed by God through the angels. But the woman’s body was formed from corporeal matter. Therefore it was made through the ministry of the angels, and not immediately by God.

Objection 3. Further, those things which pre-exist in creatures as to their causal virtues are produced by the power of some creature, and not immediately by God. But the woman’s body was produced in its causal virtues among the first created works, as Augustine says (Gen. ad lit. ix, 15). Therefore it was not produced immediately by God.

On the contrary, Augustine says, in the same work: “God alone, to Whom all nature owes its existence, could form or build up the woman from the man’s rib.”

I answer that, As was said above (a. 2, ad 2), the natural generation of every species is from some determinate matter. Now the matter whence man is naturally begotten is the human semen of man or woman. Where-

fore from any other matter an individual of the human species cannot naturally be generated. Now God alone, the Author of nature, can produce an effect into existence outside the ordinary course of nature. Therefore God alone could produce either a man from the slime of the earth, or a woman from the rib of man.

Reply to Objection 1. This argument is verified when an individual is begotten, by natural generation, from that which is like it in the same species.

Reply to Objection 2. As Augustine says (Gen. ad lit. ix, 15), we do not know whether the angels were employed by God in the formation of the woman; but it is certain that, as the body of man was not formed by the angels from the slime of the earth, so neither was the body of the woman formed by them from the man’s rib.

Reply to Objection 3. As Augustine says (Gen. ad lit. ix, 18): “The first creation of things did not demand that woman should be made thus; it made it possible for her to be thus made.” Therefore the body of the woman did indeed pre-exist in these causal virtues, in the things first created; not as regards active potentiality, but as regards a potentiality passive in relation to the active potentiality of the Creator.

Objection 1. It would seem that the woman should not have been made in the first production of things. For the Philosopher says (*De Gener. ii, 3*), that “the female is a misbegotten male.” But nothing misbegotten or defective should have been in the first production of things. Therefore woman should not have been made at that first production.

Objection 2. Further, subjection and limitation were a result of sin, for to the woman was it said after sin (*Gn. 3:16*): “Thou shalt be under the man’s power”; and Gregory says that, “Where there is no sin, there is no inequality.” But woman is naturally of less strength and dignity than man; “for the agent is always more honorable than the patient,” as Augustine says (*Gen. ad lit. xii, 16*). Therefore woman should not have been made in the first production of things before sin.

Objection 3. Further, occasions of sin should be cut off. But God foresaw that the woman would be an occasion of sin to man. Therefore He should not have made woman.

On the contrary, It is written (*Gn. 2:18*): “It is not good for man to be alone; let us make him a helper like to himself.”

Answer that, It was necessary for woman to be made, as the Scripture says, as a “helper” to man; not, indeed, as a helpmate in other works, as some say, since man can be more efficiently helped by another man in other works; but as a helper in the work of generation. This can be made clear if we observe the mode of generation carried out in various living things. Some living things do not possess in themselves the power of generation, but are generated by some other specific agent, such as some plants and animals by the influence of the heavenly bodies, from some fitting matter and not from seed: others possess the active and passive generative power together; as we see in plants which are generated from seed; for the noblest vital function in plants is generation. Wherefore we observe that in these the active power of generation invariably accompanies the passive power. Among perfect animals the active power of generation belongs to the male sex, and the passive power to the female. And as among animals there is a vital operation nobler than generation, to which their life is principally directed; therefore the male sex is not found in continual union with the female in perfect animals, but only at the time of coition; so that we may consider that

by this means the male and female are one, as in plants they are always united; although in some cases one of them preponderates, and in some the other. But man is yet further ordered to a still nobler vital action, and that is intellectual operation. Therefore there was greater reason for the distinction of these two forces in man; so that the female should be produced separately from the male; although they are carnally united for generation. Therefore directly after the formation of woman, it was said: “And they shall be two in one flesh” (*Gn. 2:24*).

Reply to Objection 1. As regards the individual nature, woman is defective and misbegotten, for the active force in the male seed tends to the production of a perfect likeness in the masculine sex; while the production of woman comes from defect in the active force or from some material indisposition, or even from some external influence; such as that of a south wind, which is moist, as the Philosopher observes (*De Gener. Animal. iv, 2*). On the other hand, as regards human nature in general, woman is not misbegotten, but is included in nature’s intention as directed to the work of generation. Now the general intention of nature depends on God, Who is the universal Author of nature. Therefore, in producing nature, God formed not only the male but also the female.

Reply to Objection 2. Subjection is twofold. One is servile, by virtue of which a superior makes use of a subject for his own benefit; and this kind of subjection began after sin. There is another kind of subjection which is called economic or civil, whereby the superior makes use of his subjects for their own benefit and good; and this kind of subjection existed even before sin. For good order would have been wanting in the human family if some were not governed by others wiser than themselves. So by such a kind of subjection woman is naturally subject to man, because in man the discretion of reason predominates. Nor is inequality among men excluded by the state of innocence, as we shall prove (*q. 96, a. 3*).

Reply to Objection 3. If God had deprived the world of all those things which proved an occasion of sin, the universe would have been imperfect. Nor was it fitting for the common good to be destroyed in order that individual evil might be avoided; especially as God is so powerful that He can direct any evil to a good end.

Objection 1. It would seem that woman should not have been made from man. For sex belongs both to man and animals. But in the other animals the female was not made from the male. Therefore neither should it have been so with man.

Objection 2. Further, things of the same species are of the same matter. But male and female are of the same species. Therefore, as man was made of the slime of the earth, so woman should have been made of the same, and not from man.

Objection 3. Further, woman was made to be a helpmate to man in the work of generation. But close relationship makes a person unfit for that office; hence near relations are debarred from intermarriage, as is written (Lev. 18:6). Therefore woman should not have been made from man.

On the contrary, It is written (Ecclus. 17:5): “He created of him,” that is, out of man, “a helpmate like to himself,” that is, woman.

I answer that, When all things were first formed, it was more suitable for the woman to be made from man than (for the female to be from the male) in other animals. First, in order thus to give the first man a certain dignity consisting in this, that as God is the principle of the whole universe, so the first man, in likeness to God, was the principle of the whole human race. Wherefore Paul says that “God made the whole human race from one” (Acts 17:26). Secondly, that man might love woman all the more, and cleave to her more closely, knowing her to be fashioned from himself. Hence it is written (Gn. 2:23,24): “She was taken out of man,

wherefore a man shall leave father and mother, and shall cleave to his wife.” This was most necessary as regards the human race, in which the male and female live together for life; which is not the case with other animals. Thirdly, because, as the Philosopher says (Ethic. viii, 12), the human male and female are united, not only for generation, as with other animals, but also for the purpose of domestic life, in which each has his or her particular duty, and in which the man is the head of the woman. Wherefore it was suitable for the woman to be made out of man, as out of her principle. Fourthly, there is a sacramental reason for this. For by this is signified that the Church takes her origin from Christ. Wherefore the Apostle says (Eph. 5:32): “This is a great sacrament; but I speak in Christ and in the Church.”

Reply obj. 1 is clear from the foregoing.

Reply to Objection 2. Matter is that from which something is made. Now created nature has a determinate principle; and since it is determined to one thing, it has also a determinate mode of proceeding. Wherefore from determinate matter it produces something in a determinate species. On the other hand, the Divine Power, being infinite, can produce things of the same species out of any matter, such as a man from the slime of the earth, and a woman from out of man.

Reply to Objection 3. A certain affinity arises from natural generation, and this is an impediment to matrimony. Woman, however, was not produced from man by natural generation, but by the Divine Power alone. Wherefore Eve is not called the daughter of Adam; and so this argument does not prove.

Objection 1. It would seem that the woman should not have been formed from the rib of man. For the rib was much smaller than the woman's body. Now from a smaller thing a larger thing can be made only—either by addition (and then the woman ought to have been described as made out of that which was added, rather than out of the rib itself)—or by rarefaction, because, as Augustine says (*Gen. ad lit. x*): “A body cannot increase in bulk except by rarefaction.” But the woman's body is not more rarefied than man's—at least, not in the proportion of a rib to Eve's body. Therefore Eve was not formed from a rib of Adam.

Objection 2. Further, in those things which were first created there was nothing superfluous. Therefore a rib of Adam belonged to the integrity of his body. So, if a rib was removed, his body remained imperfect; which is unreasonable to suppose.

Objection 3. Further, a rib cannot be removed from man without pain. But there was no pain before sin. Therefore it was not right for a rib to be taken from the man, that Eve might be made from it.

On the contrary, It is written (*Gn. 2:22*): “God built the rib, which He took from Adam, into a woman.”

I answer that, It was right for the woman to be made from a rib of man. First, to signify the social union of man and woman, for the woman should neither “use authority over man,” and so she was not made from his head; nor was it right for her to be subject to man's contempt as his slave, and so she was not made from his feet. Secondly, for the sacramental signification; for from the side of Christ sleeping on the Cross the Sacraments flowed—namely, blood and water—on which the Church was established.

Reply to Objection 1. Some say that the woman's body was formed by a material increase, without anything being added; in the same way as our Lord multiplied the five loaves. But this is quite impossible. For

such an increase of matter would either be by a change of the very substance of the matter itself, or by a change of its dimensions. Not by change of the substance of the matter, both because matter, considered in itself, is quite unchangeable, since it has a potential existence, and has nothing but the nature of a subject, and because quantity and size are extraneous to the essence of matter itself. Wherefore multiplication of matter is quite unintelligible, as long as the matter itself remains the same without anything added to it; unless it receives greater dimensions. This implies rarefaction, which is for the same matter to receive greater dimensions, as the Philosopher says (*Phys. iv*). To say, therefore, that the same matter is enlarged, without being rarefied, is to combine contradictories—viz. the definition with the absence of the thing defined.

Wherefore, as no rarefaction is apparent in such multiplication of matter, we must admit an addition of matter: either by creation, or which is more probable, by conversion. Hence Augustine says (*Tract. xxiv in Joan.*) that “Christ filled five thousand men with five loaves, in the same way as from a few seeds He produces the harvest of corn”—that is, by transformation of the nourishment. Nevertheless, we say that the crowds were fed with five loaves, or that woman was made from the rib, because an addition was made to the already existing matter of the loaves and of the rib.

Reply to Objection 2. The rib belonged to the integral perfection of Adam, not as an individual, but as the principle of the human race; just as the semen belongs to the perfection of the begetter, and is released by a natural and pleasurable operation. Much more, therefore, was it possible that by the Divine power the body of the woman should be produced from the man's rib.

From this it is clear how to answer the third objection.

Objection 1. It would seem that the woman was not formed immediately by God. For no individual is produced immediately by God from another individual alike in species. But the woman was made from a man who is of the same species. Therefore she was not made immediately by God.

Objection 2. Further, Augustine (De Trin. iii, 4) says that corporeal things are governed by God through the angels. But the woman's body was formed from corporeal matter. Therefore it was made through the ministry of the angels, and not immediately by God.

Objection 3. Further, those things which pre-exist in creatures as to their causal virtues are produced by the power of some creature, and not immediately by God. But the woman's body was produced in its causal virtues among the first created works, as Augustine says (Gen. ad lit. ix, 15). Therefore it was not produced immediately by God.

On the contrary, Augustine says, in the same work: "God alone, to Whom all nature owes its existence, could form or build up the woman from the man's rib."

I answer that, As was said above (a. 2, ad 2), the natural generation of every species is from some determinate matter. Now the matter whence man is naturally begotten is the human semen of man or woman. Where-

fore from any other matter an individual of the human species cannot naturally be generated. Now God alone, the Author of nature, can produce an effect into existence outside the ordinary course of nature. Therefore God alone could produce either a man from the slime of the earth, or a woman from the rib of man.

Reply to Objection 1. This argument is verified when an individual is begotten, by natural generation, from that which is like it in the same species.

Reply to Objection 2. As Augustine says (Gen. ad lit. ix, 15), we do not know whether the angels were employed by God in the formation of the woman; but it is certain that, as the body of man was not formed by the angels from the slime of the earth, so neither was the body of the woman formed by them from the man's rib.

Reply to Objection 3. As Augustine says (Gen. ad lit. ix, 18): "The first creation of things did not demand that woman should be made thus; it made it possible for her to be thus made." Therefore the body of the woman did indeed pre-exist in these causal virtues, in the things first created; not as regards active potentiality, but as regards a potentiality passive in relation to the active potentiality of the Creator.

FIRST PART, QUESTION 93

The End or Term of the Production of Man (In Nine Articles)

We now treat of the end or term of man's production, inasmuch as he is said to be made "to the image and likeness of God." There are under this head nine points of inquiry:

- (1) Whether the image of God is in man?
- (2) Whether the image of God is in irrational creatures?
- (3) Whether the image of God is in the angels more than in man?
- (4) Whether the image of God is in every man?
- (5) Whether the image of God is in man by comparison with the Essence, or with all the Divine Persons, or with one of them?
- (6) Whether the image of God is in man, as to his mind only?
- (7) Whether the image of God is in man's power or in his habits and acts?
- (8) Whether the image of God is in man by comparison with every object?
- (9) Of the difference between "image" and "likeness."

Whether the image of God is in man?

Ia q. 93 a. 1

Objection 1. It would seem that the image of God is not in man. For it is written (Is. 40:18): "To whom have you likened God? or what image will you make for Him?"

Objection 2. Further, to be the image of God is the property of the First-Begotten, of Whom the Apostle says (Col. 1:15): "Who is the image of the invisible God, the First-Born of every creature." Therefore the image of God is not to be found in man.

Objection 3. Further, Hilary says (De Synod*) that "an image is of the same species as that which it represents"; and he also says that "an image is the undivided and united likeness of one thing adequately representing another." But there is no species common to both God and man; nor can there be a comparison of equality between God and man. Therefore there can be no image of God in man.

On the contrary, It is written (Gn. 1:26): "Let Us make man to Our own image and likeness."

I answer that, As Augustine says (QQ. 83, qu. 74): "Where an image exists, there forthwith is likeness; but where there is likeness, there is not necessarily an image." Hence it is clear that likeness is essential to an image; and that an image adds something to likeness—namely, that it is copied from something else. For an "image" is so called because it is produced as an imitation of something else; wherefore, for instance, an egg, however much like and equal to another egg, is not called an image of the other egg, because it is not copied from it.

But equality does not belong to the essence of an image; for as Augustine says (QQ. 83, qu. 74): "Where there is an image there is not necessarily equality," as we see in a person's image reflected in a glass. Yet this is of the essence of a perfect image; for in a perfect

image nothing is wanting that is to be found in that of which it is a copy. Now it is manifest that in man there is some likeness to God, copied from God as from an exemplar; yet this likeness is not one of equality, for such an exemplar infinitely excels its copy. Therefore there is in man a likeness to God; not, indeed, a perfect likeness, but imperfect. And Scripture implies the same when it says that man was made "to" God's likeness; for the preposition "to" signifies a certain approach, as of something at a distance.

Reply to Objection 1. The Prophet speaks of bodily images made by man. Therefore he says pointedly: "What image will you make for Him?" But God made a spiritual image to Himself in man.

Reply to Objection 2. The First-Born of creatures is the perfect Image of God, reflecting perfectly that of which He is the Image, and so He is said to be the "Image," and never "to the image." But man is said to be both "image" by reason of the likeness; and "to the image" by reason of the imperfect likeness. And since the perfect likeness to God cannot be except in an identical nature, the Image of God exists in His first-born Son; as the image of the king is in his son, who is of the same nature as himself: whereas it exists in man as in an alien nature, as the image of the king is in a silver coin, as Augustine says explains in De decem Chordis (Serm. ix, al, xcvi, De Tempore).

Reply to Objection 3. As unity means absence of division, a species is said to be the same as far as it is one. Now a thing is said to be one not only numerically, specifically, or generically, but also according to a certain analogy or proportion. In this sense a creature is one with God, or like to Him; but when Hilary says "of a thing which adequately represents another," this is to be understood of a perfect image.

* Super i can. Synod. Ancyr.

Objection 1. It would seem that the image of God is to be found in irrational creatures. For Dionysius says (Div. Nom. ii): “Effects are contingent images of their causes.” But God is the cause not only of rational, but also of irrational creatures. Therefore the image of God is to be found in irrational creatures.

Objection 2. Further, the more distinct a likeness is, the nearer it approaches to the nature of an image. But Dionysius says (Div. Nom. iv) that “the solar ray has a very great similitude to the Divine goodness.” Therefore it is made to the image of God.

Objection 3. Further, the more perfect anything is in goodness, the more it is like God. But the whole universe is more perfect in goodness than man; for though each individual thing is good, all things together are called “very good” (Gn. 1:31). Therefore the whole universe is to the image of God, and not only man.

Objection 4. Further, Boethius (De Consol. iii) says of God: “Holding the world in His mind, and forming it into His image.” Therefore the whole world is to the image of God, and not only the rational creature.

On the contrary, Augustine says (Gen. ad lit. vi, 12): “Man’s excellence consists in the fact that God made him to His own image by giving him an intellectual soul, which raises him above the beasts of the field.” Therefore things without intellect are not made to God’s image.

I answer that, Not every likeness, not even what is copied from something else, is sufficient to make an image; for if the likeness be only generic, or existing by virtue of some common accident, this does not suffice for one thing to be the image of another. For instance, a worm, though from man it may originate, cannot be called man’s image, merely because of the generic likeness. Nor, if anything is made white like something else, can we say that it is the image of that thing; for whiteness is an accident belonging to many species. But the nature of an image requires likeness in species; thus the image of the king exists in his son: or, at least, in some specific accident, and chiefly in the shape; thus, we speak of a man’s image in copper. Whence Hilary says pointedly that “an image is of the same species.”

Now it is manifest that specific likeness follows the ultimate difference. But some things are like to God first and most commonly because they exist; secondly, because they live; and thirdly because they know or understand; and these last, as Augustine says (QQ. 83, qu. 51) “approach so near to God in likeness, that among all creatures nothing comes nearer to Him.” It is clear, therefore, that intellectual creatures alone, properly speaking, are made to God’s image.

Reply to Objection 1. Everything imperfect is a participation of what is perfect. Therefore even what falls short of the nature of an image, so far as it possesses any sort of likeness to God, participates in some degree the nature of an image. So Dionysius says that effects are “contingent images of their causes”; that is, as much as they happen [contingit] to be so, but not absolutely.

Reply to Objection 2. Dionysius compares the solar ray to Divine goodness, as regards its causality; not as regards its natural dignity which is involved in the idea of an image.

Reply to Objection 3. The universe is more perfect in goodness than the intellectual creature as regards extension and diffusion; but intensively and collectively the likeness to the Divine goodness is found rather in the intellectual creature, which has a capacity for the highest good. Or else we may say that a part is not rightly divided against the whole, but only against another part. Wherefore, when we say that the intellectual nature alone is to the image of God, we do not mean that the universe in any part is not to God’s image, but that the other parts are excluded.

Reply to Objection 4. Boethius here uses the word “image” to express the likeness which the product of an art bears to the artistic species in the mind of the artist. Thus every creature is an image of the exemplar type thereof in the Divine mind. We are not, however, using the word “image” in this sense; but as it implies a likeness in nature, that is, inasmuch as all things, as being, are like to the First Being; as living, like to the First Life; and as intelligent, like to the Supreme Wisdom.

Objection 1. It would seem that the angels are not more to the image of God than man is. For Augustine says in a sermon de Imagine xliii (de verbis Apost. xxvii) that God granted to no other creature besides man to be to His image. Therefore it is not true to say that the angels are more than man to the image of God.

Objection 2. Further, according to Augustine (QQ. 83, qu. 51), “man is so much to God’s image that God did not make any creature to be between Him and man: and therefore nothing is more akin to Him.” But a crea-

ture is called God’s image so far as it is akin to God. Therefore the angels are not more to the image of God than man.

Objection 3. Further, a creature is said to be to God’s image so far as it is of an intellectual nature. But the intellectual nature does not admit of intensity or remissness; for it is not an accidental thing, since it is a substance. Therefore the angels are not more to the image of God than man.

On the contrary, Gregory says (Hom. in Evang.

xxxiv): “The angel is called a “seal of resemblance” [Ezech. 28:12] because in him the resemblance of the Divine image is wrought with greater expression.”

I answer that, We may speak of God’s image in two ways. First, we may consider in it that in which the image chiefly consists, that is, the intellectual nature. Thus the image of God is more perfect in the angels than in man, because their intellectual nature is more perfect, as is clear from what has been said (q. 58, a. 3; q. 79, a. 8). Secondly, we may consider the image of God in man as regards its accidental qualities, so far as to observe in man a certain imitation of God, consisting in the fact that man proceeds from man, as God from God; and also in the fact that the whole human soul is in the whole body, as God from God; and also in the fact that the whole human soul is in the whole body, and again, in every part, as God is in regard to the whole world. In these and the like things the image of God is more perfect in man than it is in the angels. But these do not of themselves belong to the nature of the Divine image in man, unless we presuppose the first likeness, which is in the intellectual nature; otherwise even brute animals would be to God’s image. Therefore, as in their intellectual nature, the angels are more to the image of God

than man is, we must grant that, absolutely speaking, the angels are more to the image of God than man is, but that in some respects man is more like to God.

Reply to Objection 1. Augustine excludes the inferior creatures bereft of reason from the image of God; but not the angels.

Reply to Objection 2. As fire is said to be specifically the most subtle of bodies, while, nevertheless, one kind of fire is more subtle than another; so we say that nothing is more like to God than the human soul in its generic and intellectual nature, because as Augustine had said previously, “things which have knowledge, are so near to Him in likeness that of all creatures none are nearer.” Wherefore this does not mean that the angels are not more to God’s image.

Reply to Objection 3. When we say that substance does not admit of more or less, we do not mean that one species of substance is not more perfect than another; but that one and the same individual does not participate in its specific nature at one time more than at another; nor do we mean that a species of substance is shared among different individuals in a greater or lesser degree.

Whether the image of God is found in every man?

Ia q. 93 a. 4

Objection 1. It would seem that the image of God is not found in every man. For the Apostle says that “man is the image of God, but woman is the image [Vulg. glory] of man” (1 Cor. 11:7). Therefore, as woman is an individual of the human species, it is clear that every individual is not an image of God.

Objection 2. Further, the Apostle says (Rom. 8:29): “Whom God foreknew, He also predestined to be made conformable to the image of His Son.” But all men are not predestined. Therefore all men have not the conformity of image.

Objection 3. Further, likeness belongs to the nature of the image, as above explained (a. 1). But by sin man becomes unlike God. Therefore he loses the image of God.

On the contrary, It is written (Ps. 38:7): “Surely man passeth as an image.”

I answer that, Since man is said to be the image of God by reason of his intellectual nature, he is the most perfectly like God according to that in which he can best imitate God in his intellectual nature. Now the intellectual nature imitates God chiefly in this, that God understands and loves Himself. Wherefore we see that the image of God is in man in three ways. First, inasmuch as man possesses a natural aptitude for understanding and loving God; and this aptitude consists in the very nature of the mind, which is common to all men. Secondly, inasmuch as man actually and ha-

bitually knows and loves God, though imperfectly; and this image consists in the conformity of grace. Thirdly, inasmuch as man knows and loves God perfectly; and this image consists in the likeness of glory. Wherefore on the words, “The light of Thy countenance, O Lord, is signed upon us” (Ps. 4:7), the gloss distinguishes a threefold image of “creation,” of “re-creation,” and of “likeness.” The first is found in all men, the second only in the just, the third only in the blessed.

Reply to Objection 1. The image of God, in its principal signification, namely the intellectual nature, is found both in man and in woman. Hence after the words, “To the image of God He created him,” it is added, “Male and female He created them” (Gn. 1:27). Moreover it is said “them” in the plural, as Augustine (Gen. ad lit. iii, 22) remarks, lest it should be thought that both sexes were united in one individual. But in a secondary sense the image of God is found in man, and not in woman: for man is the beginning and end of woman; as God is the beginning and end of every creature. So when the Apostle had said that “man is the image and glory of God, but woman is the glory of man,” he adds his reason for saying this: “For man is not of woman, but woman of man; and man was not created for woman, but woman for man.”

Reply obj. 2 and 3: These reasons refer to the image consisting in the conformity of grace and glory.

Objection 1. It would seem that the image of God does not exist in man as to the Trinity of Persons. For Augustine says (Fulgentius De Fide ad Petrum i): “One in essence is the Godhead of the Holy Trinity; and one is the image to which man was made.” And Hilary (De Trin. v) says: “Man is made to the image of that which is common in the Trinity.” Therefore the image of God in man is of the Divine Essence, and not of the Trinity of Persons.

Objection 2. Further, it is said (De Eccl. Dogmat.) that the image of God in man is to be referred to eternity. Damascene also says (De Fide Orth. ii, 12) that the image of God in man belongs to him as “an intelligent being endowed with free-will and self-movement.” Gregory of Nyssa (De Homin. Opificio xvi) also asserts that, when Scripture says that “man was made to the image of God, it means that human nature was made a participator of all good: for the Godhead is the fulness of goodness.” Now all these things belong more to the unity of the Essence than to the distinction of the Persons. Therefore the image of God in man regards, not the Trinity of Persons, but the unity of the Essence.

Objection 3. Further, an image leads to the knowledge of that of which it is the image. Therefore, if there is in man the image of God as to the Trinity of Persons; since man can know himself by his natural reason, it follows that by his natural knowledge man could know the Trinity of the Divine Persons; which is untrue, as was shown above (q. 32, a. 1).

Objection 4. Further, the name of Image is not applicable to any of the Three Persons, but only to the Son; for Augustine says (De Trin. vi, 2) that “the Son alone is the image of the Father.” Therefore, if in man there were an image of God as regards the Person, this would not be an image of the Trinity, but only of the Son.

On the contrary, Hilary says (De Trin. iv): “The plurality of the Divine Persons is proved from the fact that man is said to have been made to the image of God.”

I answer that, as we have seen (q. 40, a. 2), the distinction of the Divine Persons is only according to origin, or, rather, relations of origin. Now the mode of origin is not the same in all things, but in each thing is adapted to the nature thereof; animated things being produced in one way, and inanimate in another; animals

in one way, and plants in another. Wherefore it is manifest that the distinction of the Divine Persons is suitable to the Divine Nature; and therefore to be to the image of God by imitation of the Divine Nature does not exclude being to the same image by the representation of the Divine Persons: but rather one follows from the other. We must, therefore, say that in man there exists the image of God, both as regards the Divine Nature and as regards the Trinity of Persons; for also in God Himself there is one Nature in Three Persons.

Thus it is clear how to solve the first two objections.

Reply to Objection 3. This argument would avail if the image of God in man represented God in a perfect manner. But, as Augustine says (De Trin. xv, 6), there is a great difference between the trinity within ourselves and the Divine Trinity. Therefore, as he there says: “We see, rather than believe, the trinity which is in ourselves; whereas we believe rather than see that God is Trinity.”

Reply to Objection 4. Some have said that in man there is an image of the Son only. Augustine rejects this opinion (De Trin. xii, 5,6). First, because as the Son is like to the Father by a likeness of essence, it would follow of necessity if man were made in likeness to the Son, that he is made to the likeness of the Father. Secondly, because if man were made only to the image of the Son, the Father would not have said, “Let Us make man to Our own image and likeness”; but “to Thy image.” When, therefore, it is written, “He made him to the image of God,” the sense is not that the Father made man to the image of the Son only, Who is God, as some explained it, but that the Divine Trinity made man to Its image, that is, of the whole Trinity. When it is said that God “made man to His image,” this can be understood in two ways: first, so that this preposition “to” points to the term of the making, and then the sense is, “Let Us make man in such a way that Our image may be in him.” Secondly, this preposition ‘to’ may point to the exemplar cause, as when we say, “This book is made (like) to that one.” Thus the image of God is the very Essence of God, Which is incorrectly called an image forasmuch as image is put for the exemplar. Or, as some say, the Divine Essence is called an image because thereby one Person imitates another.

Objection 1. It would seem that the image of God is not only in man’s mind. For the Apostle says (1 Cor. 11:7) that “the man is the image... of God.” But man is not only mind. Therefore the image of God is to be observed not only in his mind.

Objection 2. Further, it is written (Gn. 1:27): “God created man to His own image; to the image of God He created him; male and female He created them.” But the

distinction of male and female is in the body. Therefore the image of God is also in the body, and not only in the mind.

Objection 3. Further, an image seems to apply principally to the shape of a thing. But shape belongs to the body. Therefore the image of God is to be seen in man’s body also, and not in his mind.

Objection 4. Further, according to Augustine (Gen.

ad lit. xii, 7,24) there is a threefold vision in us, “corporeal,” “spiritual,” or imaginary, and “intellectual.” Therefore, if in the intellectual vision that belongs to the mind there exists in us a trinity by reason of which we are made to the image of God, for the like reason there must be another trinity in the others.

On the contrary, The Apostle says (Eph. 4:23,24): “Be renewed in the spirit of your mind, and put on the new man.” Whence we are given to understand that our renewal which consists in putting on the new man, belongs to the mind. Now, he says (Col. 3:10): “Putting on the new” man; “him who is renewed unto knowledge” of God, “according to the image of Him that created him,” where the renewal which consists in putting on the new man is ascribed to the image of God. Therefore to be to the image of God belongs to the mind only.

I answer that, While in all creatures there is some kind of likeness to God, in the rational creature alone we find a likeness of “image” as we have explained above (Aa. 1,2); whereas in other creatures we find a likeness by way of a “trace.” Now the intellect or mind is that whereby the rational creature excels other creatures; wherefore this image of God is not found even in the rational creature except in the mind; while in the other parts, which the rational creature may happen to possess, we find the likeness of a “trace,” as in other creatures to which, in reference to such parts, the rational creature can be likened. We may easily understand the reason of this if we consider the way in which a “trace,” and the way in which an “image,” represents anything. An “image” represents something by likeness in species, as we have said; while a “trace” represents something by way of an effect, which represents the cause in such a way as not to attain to the likeness of species. For imprints which are left by the movements of animals are called “traces”: so also ashes are a trace of fire, and desolation of the land a trace of a hostile army.

Therefore we may observe this difference between rational creatures and others, both as to the representation of the likeness of the Divine Nature in creatures, and as to the representation in them of the uncreated Trinity. For as to the likeness of the Divine Nature, rational creatures seem to attain, after a fashion, to the representation of the species, inasmuch as they imitate God, not only in being and life, but also in intelligence, as above explained (a. 2); whereas other creatures do not understand, although we observe in them a certain trace of the Intellect that created them, if we consider their disposition. Likewise as the uncreated Trinity is distinguished by the procession of the Word from the Speaker, and of Love from both of these, as we have seen (q. 28, a. 3); so we may say that in rational creatures wherein we find a procession of the word in the intellect, and a procession of the love in the will, there exists an image of the uncreated Trinity, by a certain representation of the species. In other creatures, how-

ever, we do not find the principle of the word, and the word and love; but we do see in them a certain trace of the existence of these in the Cause that produced them. For in the fact that a creature has a modified and finite nature, proves that it proceeds from a principle; while its species points to the (mental) word of the maker, just as the shape of a house points to the idea of the architect; and order points to the maker’s love by reason of which he directs the effect to a good end; as also the use of the house points to the will of the architect. So we find in man a likeness to God by way of an “image” in his mind; but in the other parts of his being by way of a “trace.”

Reply to Objection 1. Man is called to the image of God; not that he is essentially an image; but that the image of God is impressed on his mind; as a coin is an image of the king, as having the image of the king. Wherefore there is no need to consider the image of God as existing in every part of man.

Reply to Objection 2. As Augustine says (De Trin. xii, 5), some have thought that the image of God was not in man individually, but severally. They held that “the man represents the Person of the Father; those born of man denote the person of the Son; and that the woman is a third person in likeness to the Holy Ghost, since she so proceeded from man as not to be his son or daughter.” All of this is manifestly absurd; first, because it would follow that the Holy Ghost is the principle of the Son, as the woman is the principle of the man’s offspring; secondly, because one man would be only the image of one Person; thirdly, because in that case Scripture should not have mentioned the image of God in man until after the birth of the offspring. Therefore we must understand that when Scripture had said, “to the image of God He created him,” it added, “male and female He created them,” not to imply that the image of God came through the distinction of sex, but that the image of God belongs to both sexes, since it is in the mind, wherein there is no sexual distinction of sex, but that the image of God belongs to both sexes, since it is in the mind, wherein there is no sexual distinction. Wherefore the Apostle (Col. 3:10), after saying, “According to the image of Him that created him,” added, “Where there is neither male nor female”* (Vulg. “neither Gentile nor Jew”).

Reply to Objection 3. Although the image of God in man is not to be found in his bodily shape, yet because “the body of man alone among terrestrial animals is not inclined prone to the ground, but is adapted to look upward to heaven, for this reason we may rightly say that it is made to God’s image and likeness, rather than the bodies of other animals,” as Augustine remarks (QQ. 83, qu. 51). But this is not to be understood as though the image of God were in man’s body; but in the sense that the very shape of the human body represents the image of God in the soul by way of a trace.

Reply to Objection 4. Both in the corporeal and in

* these words are in reality from Gal. 3:28

the imaginary vision we may find a trinity, as Augustine says (*De Trin.* xi, 2). For in corporeal vision there is first the species of the exterior body; secondly, the act of vision, which occurs by the impression on the sight of a certain likeness of the said species; thirdly, the intention of the will applying the sight to see, and to rest on what is seen.

Likewise, in the imaginary vision we find first the species kept in the memory; secondly, the vision itself, which is caused by the penetrative power of the soul, that is, the faculty of imagination, informed by the species; and thirdly, we find the intention of the will joining both together. But each of these trinities falls short of the Divine image. For the species of the external body is extrinsic to the essence of the soul; while

the species in the memory, though not extrinsic to the soul, is adventitious to it; and thus in both cases the species falls short of representing the connaturality and co-eternity of the Divine Persons. The corporeal vision, too, does not proceed only from the species of the external body, but from this, and at the same time from the sense of the seer; in like manner imaginary vision is not from the species only which is preserved in the memory, but also from the imagination. For these reasons the procession of the Son from the Father alone is not suitably represented. Lastly the intention of the will joining the two together, does not proceed from them either in corporeal or spiritual vision. Wherefore the procession of the Holy Ghost from the Father and the Son is not thus properly represented.

Whether the image of God is to be found in the acts of the soul?

Ia q. 93 a. 7

Objection 1. It would seem that the image of God is not found in the acts of the soul. For Augustine says (*De Civ. Dei* xi, 26), that “man was made to God’s image, inasmuch as we exist and know that we exist, and love this existence and knowledge.” But to exist does not signify an act. Therefore the image of God is not to be found in the soul’s acts.

Objection 2. Further, Augustine (*De Trin.* ix, 4) assigns God’s image in the soul to these three things—mind, knowledge, and love. But mind does not signify an act, but rather the power or the essence of the intellectual soul. Therefore the image of God does not extend to the acts of the soul.

Objection 3. Further, Augustine (*De Trin.* x, 11) assigns the image of the Trinity in the soul to “memory, understanding, and will.” But these three are “natural powers of the soul,” as the Master of the Sentences says (1 *Sent.* D iii). Therefore the image of God is in the powers, and does not extend to the acts of the soul.

Objection 4. Further, the image of the Trinity always remains in the soul. But an act does not always remain. Therefore the image of God does not extend to the acts.

On the contrary, Augustine (*De Trin.* xi, 2 seqq.) assigns the trinity in the lower part of the soul, in relation to the actual vision, whether sensible or imaginative. Therefore, also, the trinity in the mind, by reason of which man is like to God’s image, must be referred to actual vision.

I answer that, As above explained (a. 2), a certain representation of the species belongs to the nature of an image. Hence, if the image of the Divine Trinity is to be found in the soul, we must look for it where the soul approaches the nearest to a representation of the species of the Divine Persons. Now the Divine Persons are distinct from each other by reason of the procession of the Word from the Speaker, and the procession of Love connecting Both. But in our soul word “cannot exist with-

out actual thought,” as Augustine says (*De Trin.* xiv, 7). Therefore, first and chiefly, the image of the Trinity is to be found in the acts of the soul, that is, inasmuch as from the knowledge which we possess, by actual thought we form an internal word; and thence break forth into love. But, since the principles of acts are the habits and powers, and everything exists virtually in its principle, therefore, secondarily and consequently, the image of the Trinity may be considered as existing in the powers, and still more in the habits, forasmuch as the acts virtually exist therein.

Reply to Objection 1. Our being bears the image of God so far as if is proper to us, and excels that of the other animals, that is to say, in so far as we are endowed with a mind. Therefore, this trinity is the same as that which Augustine mentions (*De Trin.* ix, 4), and which consists in mind, knowledge, and love.

Reply to Objection 2. Augustine observed this trinity, first, as existing in the mind. But because the mind, though it knows itself entirely in a certain degree, yet also in a way does not know itself—namely, as being distinct from others (and thus also it searches itself, as Augustine subsequently proves—*De Trin.* x, 3,4); therefore, as though knowledge were not in equal proportion to mind, he takes three things in the soul which are proper to the mind, namely, memory, understanding, and will; which everyone is conscious of possessing; and assigns the image of the Trinity pre-eminently to these three, as though the first assignation were in part deficient.

Reply to Objection 3. As Augustine proves (*De Trin.* xiv, 7), we may be said to understand, will, and to love certain things, both when we actually consider them, and when we do not think of them. When they are not under our actual consideration, they are objects of our memory only, which, in his opinion, is nothing else than habitual retention of knowledge and love*. “But since,” as he says, “a word cannot be there without ac-

* Cf. q. 79, a. 7, ad 1

tual thought (for we think everything that we say, even if we speak with that interior word belonging to no nation's tongue), this image chiefly consists in these three things, memory, understanding, and will. And by understanding I mean here that whereby we understand with actual thought; and by will, love, or dilection I mean that which unites this child with its parent." From which it is clear that he places the image of the Divine Trinity more in actual understanding and will, than in these as existing in the habitual retention of the memory; although even thus the image of the Trinity exists in the soul in a certain degree, as he says in the same place. Thus it is clear that memory, understanding, and will are not three powers as stated in the Sentences.

Reply to Objection 4. Someone might answer by referring to Augustine's statement (De Trin. xiv, 6), that "the mind ever remembers itself, ever understands

itself, ever loves itself"; which some take to mean that the soul ever actually understands, and loves itself. But he excludes this interpretation by adding that "it does not always think of itself as actually distinct from other things." Thus it is clear that the soul always understands and loves itself, not actually but habitually; though we might say that by perceiving its own act, it understands itself whenever it understands anything. But since it is not always actually understanding, as in the case of sleep, we must say that these acts, although not always actually existing, yet ever exist in their principles, the habits and powers. Wherefore, Augustine says (De Trin. xiv, 4): "If the rational soul is made to the image of God in the sense that it can make use of reason and intellect to understand and consider God, then the image of God was in the soul from the beginning of its existence."

Whether the image of the Divine Trinity is in the soul only by comparison with God as its object?

Ia q. 93 a. 8

Objection 1. It would seem that the image of the Divine Trinity is in the soul not only by comparison with God as its object. For the image of the Divine Trinity is to be found in the soul, as shown above (a. 7), according as the word in us proceeds from the speaker; and love from both. But this is to be found in us as regards any object. Therefore the image of the Divine Trinity is in our mind as regards any object.

Objection 2. Further, Augustine says (De Trin. xii, 4) that "when we seek trinity in the soul, we seek it in the whole of the soul, without separating the process of reasoning in temporal matters from the consideration of things eternal." Therefore the image of the Trinity is to be found in the soul, even as regards temporal objects.

Objection 3. Further, it is by grace that we can know and love God. If, therefore, the image of the Trinity is found in the soul by reason of the memory, understanding, and will or love of God, this image is not in man by nature but by grace, and thus is not common to all.

Objection 4. Further, the saints in heaven are most perfectly conformed to the image of God by the beatific vision; wherefore it is written (2 Cor. 3:18): "We... are transformed into the same image from glory to glory." But temporal things are known by the beatific vision. Therefore the image of God exists in us even according to temporal things.

On the contrary, Augustine says (De Trin. xiv, 12): "The image of God exists in the mind, not because it has a remembrance of itself, loves itself, and understands itself; but because it can also remember, understand, and love God by Whom it was made." Much less, therefore, is the image of God in the soul, in respect of other objects.

I answer that, As above explained (Aa. 2,7), image means a likeness which in some degree, however

small, attains to a representation of the species. Wherefore we need to seek in the image of the Divine Trinity in the soul some kind of representation of species of the Divine Persons, so far as this is possible to a creature. Now the Divine Persons, as above stated (Aa. 6,7), are distinguished from each other according to the procession of the word from the speaker, and the procession of love from both. Moreover the Word of God is born of God by the knowledge of Himself; and Love proceeds from God according as He loves Himself. But it is clear that diversity of objects diversifies the species of word and love; for in the human mind the species of a stone is specifically different from that of a horse, which also the love regarding each of them is specifically different. Hence we refer the Divine image in man to the verbal concept born of the knowledge of God, and to the love derived therefrom. Thus the image of God is found in the soul according as the soul turns to God, or possesses a nature that enables it to turn to God. Now the mind may turn towards an object in two ways: directly and immediately, or indirectly and mediately; as, for instance, when anyone sees a man reflected in a looking-glass he may be said to be turned towards that man. So Augustine says (De Trin. xiv, 8), the "the mind remembers itself, understands itself, and loves itself. If we perceive this, we perceive a trinity, not, indeed, God, but, nevertheless, rightly called the image of God." But this is due to the fact, not that the mind reflects on itself absolutely, but that thereby it can furthermore turn to God, as appears from the authority quoted above (Arg. On the contrary).

Reply to Objection 1. For the notion of an image it is not enough that something proceed from another, but it is also necessary to observe what proceeds and whence it proceeds; namely, that what is Word of God proceeds from knowledge of God.

Reply to Objection 2. In all the soul we may see a kind of trinity, not, however, as though besides the action of temporal things and the contemplation of eternal things, “any third thing should be required to make up the trinity,” as he adds in the same passage. But in that part of the reason which is concerned with temporal things, “although a trinity may be found; yet the image of God is not to be seen there,” as he says farther on; forasmuch as this knowledge of temporal things is adventitious to the soul. Moreover even the habits whereby temporal things are known are not always present; but sometimes they are actually present, and sometimes present only in memory even after they begin to exist in the soul. Such is clearly the case with faith, which comes to us temporally for this present life; while in the future life faith will no longer exist, but only the remembrance of faith.

Reply to Objection 3. The meritorious knowledge and love of God can be in us only by grace. Yet there

is a certain natural knowledge and love as seen above (q. 12, a. 12; q. 56, a. 3; q. 60, a. 5). This, too, is natural that the mind, in order to understand God, can make use of reason, in which sense we have already said that the image of God abides ever in the soul; “whether this image of God be so obsolete,” as it were clouded, “as almost to amount to nothing,” as in those who have not the use of reason; “or obscured and disfigured,” as in sinners; or “clear and beautiful,” as in the just; as Augustine says (*De Trin.* xiv, 6).

Reply to Objection 4. By the vision of glory temporal things will be seen in God Himself; and such a vision of things temporal will belong to the image of God. This is what Augustine means (*De Trin.* xiv, 6), when he says that “in that nature to which the mind will blissfully adhere, whatever it sees it will see as unchangeable”; for in the Uncreated Word are the types of all creatures.

Whether “likeness” is properly distinguished from “image”?

Ia q. 93 a. 9

Objection 1. It would seem that “likeness” is not properly distinguished from “image.” For “genus” is not properly distinguished from “species.” Now, “likeness” is to “image” as genus to species: because, “where there is image, forthwith there is likeness, but not conversely” as Augustine says (QQ. 83, qu. 74). Therefore “likeness” is not properly to be distinguished from “image.”

Objection 2. Further, the nature of the image consists not only in the representation of the Divine Persons, but also in the representation of the Divine Essence, to which representation belong immortality and indivisibility. So it is not true to say that the “likeness is in the essence because it is immortal and indivisible; whereas the image is in other things” (*Sent.* ii, D, xvi).

Objection 3. Further, the image of God in man is threefold—the image of nature, of grace, and of glory, as above explained (a. 4). But innocence and righteousness belong to grace. Therefore it is incorrectly said (*Sent.* ii, D, xvi) “that the image is taken from the memory, the understanding and the will, while the likeness is from innocence and righteousness.”

Objection 4. Further, knowledge of truth belongs to the intellect, and love of virtue to the will; which two things are parts of the image. Therefore it is incorrect to say (*Sent.* ii, D, xvi) that “the image consists in the knowledge of truth, and the likeness in the love of virtue.”

On the contrary, Augustine says (QQ. 83, qu. 51): “Some consider that these two were mentioned not without reason, namely “image” and “likeness,” since, if they meant the same, one would have sufficed.”

I answer that, Likeness is a kind of unity, for oneness in quality causes likeness, as the Philosopher says (*Metaph.* v, Did. iv, 15). Now, since “one” is a tran-

scendental, it is both common to all, and adapted to each single thing, just as the good and the true. Wherefore, as the good can be compared to each individual thing both as its preamble, and as subsequent to it, as signifying some perfection in it, so also in the same way there exists a kind of comparison between “likeness” and “image.” For the good is a preamble to man, inasmuch as man is an individual good; and, again, the good is subsequent to man, inasmuch as we may say of a certain man that he is good, by reason of his perfect virtue. In like manner, likeness may be considered in the light of a preamble to image, inasmuch as it is something more general than image, as we have said above (a. 1): and, again, it may be considered as subsequent to image, inasmuch as it signifies a certain perfection of image. For we say that an image is like or unlike what it represents, according as the representation is perfect or imperfect. Thus likeness may be distinguished from image in two ways: first as its preamble and existing in more things, and in this sense likeness regards things which are more common than the intellectual properties, wherein the image is properly to be seen. In this sense it is stated (QQ. 83, qu. 51) that “the spirit” (namely, the mind) without doubt was made to the image of God. “But the other parts of man,” belonging to the soul’s inferior faculties, or even to the body, “are in the opinion of some made to God’s likeness.” In this sense he says (*De Quant. Animae* ii) that the likeness of God is found in the soul’s incorruptibility; for corruptible and incorruptible are differences of universal beings. But likeness may be considered in another way, as signifying the expression and perfection of the image. In this sense Damascene says (*De Fide Orth.* ii, 12) that the image implies “an intelligent being, endowed with free-will and self-movement, whereas like-

ness implies a likeness of power, as far as this may be possible in man.” In the same sense “likeness” is said to belong to “the love of virtue”: for there is no virtue without love of virtue.

Reply to Objection 1. “Likeness” is not distinct from “image” in the general notion of “likeness” (for thus it is included in “image”); but so far as any “likeness” falls short of “image,” or again, as it perfects the idea of “image.”

Reply to Objection 2. The soul’s essence belongs to the “image,” as representing the Divine Essence in those things which belong to the intellectual nature; but

not in those conditions subsequent to general notions of being, such as simplicity and indissolubility.

Reply to Objection 3. Even certain virtues are natural to the soul, at least, in their seeds, by reason of which we may say that a natural “likeness” exists in the soul. Nor it is unfitting to us the term “image” from one point of view and from another the term “likeness.”

Reply to Objection 4. Love of the word, which is knowledge loved, belongs to the nature of “image”; but love of virtue belongs to “likeness,” as virtue itself belongs to likeness.

Objection 1. It would seem that the image of God is not in man. For it is written (Is. 40:18): “To whom have you likened God? or what image will you make for Him?”

Objection 2. Further, to be the image of God is the property of the First-Begotten, of Whom the Apostle says (Col. 1:15): “Who is the image of the invisible God, the First-Born of every creature.” Therefore the image of God is not to be found in man.

Objection 3. Further, Hilary says (De Synod*) that “an image is of the same species as that which it represents”; and he also says that “an image is the undivided and united likeness of one thing adequately representing another.” But there is no species common to both God and man; nor can there be a comparison of equality between God and man. Therefore there can be no image of God in man.

On the contrary, It is written (Gn. 1:26): “Let Us make man to Our own image and likeness.”

I answer that, As Augustine says (QQ. 83, qu. 74): “Where an image exists, there forthwith is likeness; but where there is likeness, there is not necessarily an image.” Hence it is clear that likeness is essential to an image; and that an image adds something to likeness—namely, that it is copied from something else. For an “image” is so called because it is produced as an imitation of something else; wherefore, for instance, an egg, however much like and equal to another egg, is not called an image of the other egg, because it is not copied from it.

But equality does not belong to the essence of an image; for as Augustine says (QQ. 83, qu. 74): “Where there is an image there is not necessarily equality,” as we see in a person’s image reflected in a glass. Yet this is of the essence of a perfect image; for in a perfect

image nothing is wanting that is to be found in that of which it is a copy. Now it is manifest that in man there is some likeness to God, copied from God as from an exemplar; yet this likeness is not one of equality, for such an exemplar infinitely excels its copy. Therefore there is in man a likeness to God; not, indeed, a perfect likeness, but imperfect. And Scripture implies the same when it says that man was made “to” God’s likeness; for the preposition “to” signifies a certain approach, as of something at a distance.

Reply to Objection 1. The Prophet speaks of bodily images made by man. Therefore he says pointedly: “What image will you make for Him?” But God made a spiritual image to Himself in man.

Reply to Objection 2. The First-Born of creatures is the perfect Image of God, reflecting perfectly that of which He is the Image, and so He is said to be the “Image,” and never “to the image.” But man is said to be both “image” by reason of the likeness; and “to the image” by reason of the imperfect likeness. And since the perfect likeness to God cannot be except in an identical nature, the Image of God exists in His first-born Son; as the image of the king is in his son, who is of the same nature as himself: whereas it exists in man as in an alien nature, as the image of the king is in a silver coin, as Augustine says explains in *De decem Chordis* (Serm. ix, al, xcvi, De Tempore).

Reply to Objection 3. As unity means absence of division, a species is said to be the same as far as it is one. Now a thing is said to be one not only numerically, specifically, or generically, but also according to a certain analogy or proportion. In this sense a creature is one with God, or like to Him; but when Hilary says “of a thing which adequately represents another,” this is to be understood of a perfect image.

* Super i can. Synod. Ancyr.

Objection 1. It would seem that the image of God is to be found in irrational creatures. For Dionysius says (Div. Nom. ii): “Effects are contingent images of their causes.” But God is the cause not only of rational, but also of irrational creatures. Therefore the image of God is to be found in irrational creatures.

Objection 2. Further, the more distinct a likeness is, the nearer it approaches to the nature of an image. But Dionysius says (Div. Nom. iv) that “the solar ray has a very great similitude to the Divine goodness.” Therefore it is made to the image of God.

Objection 3. Further, the more perfect anything is in goodness, the more it is like God. But the whole universe is more perfect in goodness than man; for though each individual thing is good, all things together are called “very good” (Gn. 1:31). Therefore the whole universe is to the image of God, and not only man.

Objection 4. Further, Boethius (De Consol. iii) says of God: “Holding the world in His mind, and forming it into His image.” Therefore the whole world is to the image of God, and not only the rational creature.

On the contrary, Augustine says (Gen. ad lit. vi, 12): “Man’s excellence consists in the fact that God made him to His own image by giving him an intellectual soul, which raises him above the beasts of the field.” Therefore things without intellect are not made to God’s image.

I answer that, Not every likeness, not even what is copied from something else, is sufficient to make an image; for if the likeness be only generic, or existing by virtue of some common accident, this does not suffice for one thing to be the image of another. For instance, a worm, though from man it may originate, cannot be called man’s image, merely because of the generic likeness. Nor, if anything is made white like something else, can we say that it is the image of that thing; for whiteness is an accident belonging to many species. But the nature of an image requires likeness in species; thus the image of the king exists in his son: or, at least, in some specific accident, and chiefly in the shape; thus, we speak of a man’s image in copper. Whence Hilary says pointedly that “an image is of the same species.”

Now it is manifest that specific likeness follows the ultimate difference. But some things are like to God first and most commonly because they exist; secondly, because they live; and thirdly because they know or understand; and these last, as Augustine says (QQ. 83, qu. 51) “approach so near to God in likeness, that among all creatures nothing comes nearer to Him.” It is clear, therefore, that intellectual creatures alone, properly speaking, are made to God’s image.

Reply to Objection 1. Everything imperfect is a participation of what is perfect. Therefore even what falls short of the nature of an image, so far as it possesses any sort of likeness to God, participates in some degree the nature of an image. So Dionysius says that effects are “contingent images of their causes”; that is, as much as they happen [contingit] to be so, but not absolutely.

Reply to Objection 2. Dionysius compares the solar ray to Divine goodness, as regards its causality; not as regards its natural dignity which is involved in the idea of an image.

Reply to Objection 3. The universe is more perfect in goodness than the intellectual creature as regards extension and diffusion; but intensively and collectively the likeness to the Divine goodness is found rather in the intellectual creature, which has a capacity for the highest good. Or else we may say that a part is not rightly divided against the whole, but only against another part. Wherefore, when we say that the intellectual nature alone is to the image of God, we do not mean that the universe in any part is not to God’s image, but that the other parts are excluded.

Reply to Objection 4. Boethius here uses the word “image” to express the likeness which the product of an art bears to the artistic species in the mind of the artist. Thus every creature is an image of the exemplar type thereof in the Divine mind. We are not, however, using the word “image” in this sense; but as it implies a likeness in nature, that is, inasmuch as all things, as being, are like to the First Being; as living, like to the First Life; and as intelligent, like to the Supreme Wisdom.

Objection 1. It would seem that the angels are not more to the image of God than man is. For Augustine says in a sermon de Imagine xliii (de verbis Apost. xxvii) that God granted to no other creature besides man to be to His image. Therefore it is not true to say that the angels are more than man to the image of God.

Objection 2. Further, according to Augustine (QQ. 83, qu. 51), “man is so much to God’s image that God did not make any creature to be between Him and man: and therefore nothing is more akin to Him.” But a creature is called God’s image so far as it is akin to God. Therefore the angels are not more to the image of God than man.

Objection 3. Further, a creature is said to be to God’s image so far as it is of an intellectual nature. But the intellectual nature does not admit of intensity or remissness; for it is not an accidental thing, since it is a substance. Therefore the angels are not more to the image of God than man.

On the contrary, Gregory says (Hom. in Evang. xxxiv): “The angel is called a “seal of resemblance” [Ezech. 28:12] because in him the resemblance of the Divine image is wrought with greater expression.”

I answer that, We may speak of God’s image in two ways. First, we may consider in it that in which the image chiefly consists, that is, the intellectual nature. Thus the image of God is more perfect in the angels than in man, because their intellectual nature is more perfect, as is clear from what has been said (q. 58, a. 3; q. 79, a. 8). Secondly, we may consider the image of God in man as regards its accidental qualities, so far as to observe in man a certain imitation of God, consisting in the fact that man proceeds from man, as God from God; and also in the fact that the whole human soul is in the

whole body, as God from God; and also in the fact that the whole human soul is in the whole body, and again, in every part, as God is in regard to the whole world. In these and the like things the image of God is more perfect in man than it is in the angels. But these do not of themselves belong to the nature of the Divine image in man, unless we presuppose the first likeness, which is in the intellectual nature; otherwise even brute animals would be to God’s image. Therefore, as in their intellectual nature, the angels are more to the image of God than man is, we must grant that, absolutely speaking, the angels are more to the image of God than man is, but that in some respects man is more like to God.

Reply to Objection 1. Augustine excludes the inferior creatures bereft of reason from the image of God; but not the angels.

Reply to Objection 2. As fire is said to be specifically the most subtle of bodies, while, nevertheless, one kind of fire is more subtle than another; so we say that nothing is more like to God than the human soul in its generic and intellectual nature, because as Augustine had said previously, “things which have knowledge, are so near to Him in likeness that of all creatures none are nearer.” Wherefore this does not mean that the angels are not more to God’s image.

Reply to Objection 3. When we say that substance does not admit of more or less, we do not mean that one species of substance is not more perfect than another; but that one and the same individual does not participate in its specific nature at one time more than at another; nor do we mean that a species of substance is shared among different individuals in a greater or lesser degree.

Objection 1. It would seem that the image of God is not found in every man. For the Apostle says that “man is the image of God, but woman is the image [Vulg. glory] of man” (1 Cor. 11:7). Therefore, as woman is an individual of the human species, it is clear that every individual is not an image of God.

Objection 2. Further, the Apostle says (Rom. 8:29): “Whom God foreknew, He also predestined to be made conformable to the image of His Son.” But all men are not predestined. Therefore all men have not the conformity of image.

Objection 3. Further, likeness belongs to the nature of the image, as above explained (a. 1). But by sin man becomes unlike God. Therefore he loses the image of God.

On the contrary, It is written (Ps. 38:7): “Surely man passeth as an image.”

I answer that, Since man is said to be the image of God by reason of his intellectual nature, he is the most perfectly like God according to that in which he can best imitate God in his intellectual nature. Now the intellectual nature imitates God chiefly in this, that God understands and loves Himself. Wherefore we see that the image of God is in man in three ways. First, inasmuch as man possesses a natural aptitude for understanding and loving God; and this aptitude consists in the very nature of the mind, which is common to all men. Secondly, inasmuch as man actually and ha-

bitually knows and loves God, though imperfectly; and this image consists in the conformity of grace. Thirdly, inasmuch as man knows and loves God perfectly; and this image consists in the likeness of glory. Wherefore on the words, “The light of Thy countenance, O Lord, is signed upon us” (Ps. 4:7), the gloss distinguishes a threefold image of “creation,” of “re-creation,” and of “likeness.” The first is found in all men, the second only in the just, the third only in the blessed.

Reply to Objection 1. The image of God, in its principal signification, namely the intellectual nature, is found both in man and in woman. Hence after the words, “To the image of God He created him,” it is added, “Male and female He created them” (Gn. 1:27). Moreover it is said “them” in the plural, as Augustine (Gen. ad lit. iii, 22) remarks, lest it should be thought that both sexes were united in one individual. But in a secondary sense the image of God is found in man, and not in woman: for man is the beginning and end of woman; as God is the beginning and end of every creature. So when the Apostle had said that “man is the image and glory of God, but woman is the glory of man,” he adds his reason for saying this: “For man is not of woman, but woman of man; and man was not created for woman, but woman for man.”

Reply obj. 2 and 3: These reasons refer to the image consisting in the conformity of grace and glory.

Objection 1. It would seem that the image of God does not exist in man as to the Trinity of Persons. For Augustine says (Fulgentius De Fide ad Petrum i): “One in essence is the Godhead of the Holy Trinity; and one is the image to which man was made.” And Hilary (De Trin. v) says: “Man is made to the image of that which is common in the Trinity.” Therefore the image of God in man is of the Divine Essence, and not of the Trinity of Persons.

Objection 2. Further, it is said (De Eccl. Dogmat.) that the image of God in man is to be referred to eternity. Damascene also says (De Fide Orth. ii, 12) that the image of God in man belongs to him as “an intelligent being endowed with free-will and self-movement.” Gregory of Nyssa (De Homin. Opificio xvi) also asserts that, when Scripture says that “man was made to the image of God, it means that human nature was made a participator of all good: for the Godhead is the fulness of goodness.” Now all these things belong more to the unity of the Essence than to the distinction of the Persons. Therefore the image of God in man regards, not the Trinity of Persons, but the unity of the Essence.

Objection 3. Further, an image leads to the knowledge of that of which it is the image. Therefore, if there is in man the image of God as to the Trinity of Persons; since man can know himself by his natural reason, it follows that by his natural knowledge man could know the Trinity of the Divine Persons; which is untrue, as was shown above (q. 32, a. 1).

Objection 4. Further, the name of Image is not applicable to any of the Three Persons, but only to the Son; for Augustine says (De Trin. vi, 2) that “the Son alone is the image of the Father.” Therefore, if in man there were an image of God as regards the Person, this would not be an image of the Trinity, but only of the Son.

On the contrary, Hilary says (De Trin. iv): “The plurality of the Divine Persons is proved from the fact that man is said to have been made to the image of God.”

I answer that, as we have seen (q. 40, a. 2), the distinction of the Divine Persons is only according to origin, or, rather, relations of origin. Now the mode of origin is not the same in all things, but in each thing is adapted to the nature thereof; animated things being produced in one way, and inanimate in another; animals

in one way, and plants in another. Wherefore it is manifest that the distinction of the Divine Persons is suitable to the Divine Nature; and therefore to be to the image of God by imitation of the Divine Nature does not exclude being to the same image by the representation of the Divine Persons: but rather one follows from the other. We must, therefore, say that in man there exists the image of God, both as regards the Divine Nature and as regards the Trinity of Persons; for also in God Himself there is one Nature in Three Persons.

Thus it is clear how to solve the first two objections.

Reply to Objection 3. This argument would avail if the image of God in man represented God in a perfect manner. But, as Augustine says (De Trin. xv, 6), there is a great difference between the trinity within ourselves and the Divine Trinity. Therefore, as he there says: “We see, rather than believe, the trinity which is in ourselves; whereas we believe rather than see that God is Trinity.”

Reply to Objection 4. Some have said that in man there is an image of the Son only. Augustine rejects this opinion (De Trin. xii, 5,6). First, because as the Son is like to the Father by a likeness of essence, it would follow of necessity if man were made in likeness to the Son, that he is made to the likeness of the Father. Secondly, because if man were made only to the image of the Son, the Father would not have said, “Let Us make man to Our own image and likeness”; but “to Thy image.” When, therefore, it is written, “He made him to the image of God,” the sense is not that the Father made man to the image of the Son only, Who is God, as some explained it, but that the Divine Trinity made man to Its image, that is, of the whole Trinity. When it is said that God “made man to His image,” this can be understood in two ways: first, so that this preposition “to” points to the term of the making, and then the sense is, “Let Us make man in such a way that Our image may be in him.” Secondly, this preposition ‘to’ may point to the exemplar cause, as when we say, “This book is made (like) to that one.” Thus the image of God is the very Essence of God, Which is incorrectly called an image forasmuch as image is put for the exemplar. Or, as some say, the Divine Essence is called an image because thereby one Person imitates another.

Objection 1. It would seem that the image of God is not only in man's mind. For the Apostle says (1 Cor. 11:7) that "the man is the image... of God." But man is not only mind. Therefore the image of God is to be observed not only in his mind.

Objection 2. Further, it is written (Gn. 1:27): "God created man to His own image; to the image of God He created him; male and female He created them." But the distinction of male and female is in the body. Therefore the image of God is also in the body, and not only in the mind.

Objection 3. Further, an image seems to apply principally to the shape of a thing. But shape belongs to the body. Therefore the image of God is to be seen in man's body also, and not in his mind.

Objection 4. Further, according to Augustine (Gen. ad lit. xii, 7,24) there is a threefold vision in us, "corporeal," "spiritual," or imaginary, and "intellectual." Therefore, if in the intellectual vision that belongs to the mind there exists in us a trinity by reason of which we are made to the image of God, for the like reason there must be another trinity in the others.

On the contrary, The Apostle says (Eph. 4:23,24): "Be renewed in the spirit of your mind, and put on the new man." Whence we are given to understand that our renewal which consists in putting on the new man, belongs to the mind. Now, he says (Col. 3:10): "Putting on the new" man; "him who is renewed unto knowledge" of God, "according to the image of Him that created him," where the renewal which consists in putting on the new man is ascribed to the image of God. Therefore to be to the image of God belongs to the mind only.

I answer that, While in all creatures there is some kind of likeness to God, in the rational creature alone we find a likeness of "image" as we have explained above (Aa. 1,2); whereas in other creatures we find a likeness by way of a "trace." Now the intellect or mind is that whereby the rational creature excels other creatures; wherefore this image of God is not found even in the rational creature except in the mind; while in the other parts, which the rational creature may happen to possess, we find the likeness of a "trace," as in other creatures to which, in reference to such parts, the rational creature can be likened. We may easily understand the reason of this if we consider the way in which a "trace," and the way in which an "image," represents anything. An "image" represents something by likeness in species, as we have said; while a "trace" represents something by way of an effect, which represents the cause in such a way as not to attain to the likeness of species. For imprints which are left by the movements of animals are called "traces": so also ashes are a trace of fire, and desolation of the land a trace of a hostile army.

Therefore we may observe this difference between rational creatures and others, both as to the representa-

tion of the likeness of the Divine Nature in creatures, and as to the representation in them of the uncreated Trinity. For as to the likeness of the Divine Nature, rational creatures seem to attain, after a fashion, to the representation of the species, inasmuch as they imitate God, not only in being and life, but also in intelligence, as above explained (a. 2); whereas other creatures do not understand, although we observe in them a certain trace of the Intellect that created them, if we consider their disposition. Likewise as the uncreated Trinity is distinguished by the procession of the Word from the Speaker, and of Love from both of these, as we have seen (q. 28, a. 3); so we may say that in rational creatures wherein we find a procession of the word in the intellect, and a procession of the love in the will, there exists an image of the uncreated Trinity, by a certain representation of the species. In other creatures, however, we do not find the principle of the word, and the word and love; but we do see in them a certain trace of the existence of these in the Cause that produced them. For in the fact that a creature has a modified and finite nature, proves that it proceeds from a principle; while its species points to the (mental) word of the maker, just as the shape of a house points to the idea of the architect; and order points to the maker's love by reason of which he directs the effect to a good end; as also the use of the house points to the will of the architect. So we find in man a likeness to God by way of an "image" in his mind; but in the other parts of his being by way of a "trace."

Reply to Objection 1. Man is called to the image of God; not that he is essentially an image; but that the image of God is impressed on his mind; as a coin is an image of the king, as having the image of the king. Wherefore there is no need to consider the image of God as existing in every part of man.

Reply to Objection 2. As Augustine says (De Trin. xii, 5), some have thought that the image of God was not in man individually, but severally. They held that "the man represents the Person of the Father; those born of man denote the person of the Son; and that the woman is a third person in likeness to the Holy Ghost, since she so proceeded from man as not to be his son or daughter." All of this is manifestly absurd; first, because it would follow that the Holy Ghost is the principle of the Son, as the woman is the principle of the man's offspring; secondly, because one man would be only the image of one Person; thirdly, because in that case Scripture should not have mentioned the image of God in man until after the birth of the offspring. Therefore we must understand that when Scripture had said, "to the image of God He created him," it added, "male and female He created them," not to imply that the image of God came through the distinction of sex, but that the image of God belongs to both sexes, since it is in the mind, wherein there is no sexual distinction of sex, but that the image

of God belongs to both sexes, since it is in the mind, wherein there is no sexual distinction. Wherefore the Apostle (Col. 3:10), after saying, "According to the image of Him that created him," added, "Where there is neither male nor female"* (Vulg. "neither Gentile nor Jew").

Reply to Objection 3. Although the image of God in man is not to be found in his bodily shape, yet because "the body of man alone among terrestrial animals is not inclined prone to the ground, but is adapted to look upward to heaven, for this reason we may rightly say that it is made to God's image and likeness, rather than the bodies of other animals," as Augustine remarks (QQ. 83, qu. 51). But this is not to be understood as though the image of God were in man's body; but in the sense that the very shape of the human body represents the image of God in the soul by way of a trace.

Reply to Objection 4. Both in the corporeal and in the imaginary vision we may find a trinity, as Augustine says (De Trin. xi, 2). For in corporeal vision there is first the species of the exterior body; secondly, the act of vision, which occurs by the impression on the sight of a certain likeness of the said species; thirdly, the intention of the will applying the sight to see, and to rest

on what is seen.

Likewise, in the imaginary vision we find first the species kept in the memory; secondly, the vision itself, which is caused by the penetrative power of the soul, that is, the faculty of imagination, informed by the species; and thirdly, we find the intention of the will joining both together. But each of these trinities falls short of the Divine image. For the species of the external body is extrinsic to the essence of the soul; while the species in the memory, though not extrinsic to the soul, is adventitious to it; and thus in both cases the species falls short of representing the connaturality and co-eternity of the Divine Persons. The corporeal vision, too, does not proceed only from the species of the external body, but from this, and at the same time from the sense of the seer; in like manner imaginary vision is not from the species only which is preserved in the memory, but also from the imagination. For these reasons the procession of the Son from the Father alone is not suitably represented. Lastly the intention of the will joining the two together, does not proceed from them either in corporeal or spiritual vision. Wherefore the procession of the Holy Ghost from the Father and the Son is not thus properly represented.

* these words are in reality from Gal. 3:28

Objection 1. It would seem that the image of God is not found in the acts of the soul. For Augustine says (*De Civ. Dei* xi, 26), that “man was made to God’s image, inasmuch as we exist and know that we exist, and love this existence and knowledge.” But to exist does not signify an act. Therefore the image of God is not to be found in the soul’s acts.

Objection 2. Further, Augustine (*De Trin.* ix, 4) assigns God’s image in the soul to these three things—mind, knowledge, and love. But mind does not signify an act, but rather the power or the essence of the intellectual soul. Therefore the image of God does not extend to the acts of the soul.

Objection 3. Further, Augustine (*De Trin.* x, 11) assigns the image of the Trinity in the soul to “memory, understanding, and will.” But these three are “natural powers of the soul,” as the Master of the Sentences says (1 *Sent.* D iii). Therefore the image of God is in the powers, and does not extend to the acts of the soul.

Objection 4. Further, the image of the Trinity always remains in the soul. But an act does not always remain. Therefore the image of God does not extend to the acts.

On the contrary, Augustine (*De Trin.* xi, 2 *seqq.*) assigns the trinity in the lower part of the soul, in relation to the actual vision, whether sensible or imaginative. Therefore, also, the trinity in the mind, by reason of which man is like to God’s image, must be referred to actual vision.

I answer that, As above explained (a. 2), a certain representation of the species belongs to the nature of an image. Hence, if the image of the Divine Trinity is to be found in the soul, we must look for it where the soul approaches the nearest to a representation of the species of the Divine Persons. Now the Divine Persons are distinct from each other by reason of the procession of the Word from the Speaker, and the procession of Love connecting Both. But in our soul word “cannot exist without actual thought,” as Augustine says (*De Trin.* xiv, 7). Therefore, first and chiefly, the image of the Trinity is to be found in the acts of the soul, that is, inasmuch as from the knowledge which we possess, by actual thought we form an internal word; and thence break forth into love. But, since the principles of acts are the habits and powers, and everything exists virtually in its principle, therefore, secondarily and consequently, the image of the Trinity may be considered as existing in the powers, and still more in the habits, forasmuch as the acts virtually exist therein.

Reply to Objection 1. Our being bears the image of God so far as if is proper to us, and excels that of the other animals, that is to say, in so far as we are endowed with a mind. Therefore, this trinity is the same as that which Augustine mentions (*De Trin.* ix, 4), and which consists in mind, knowledge, and love.

Reply to Objection 2. Augustine observed this trinity, first, as existing in the mind. But because the mind, though it knows itself entirely in a certain degree, yet also in a way does not know itself—namely, as being distinct from others (and thus also it searches itself, as Augustine subsequently proves—*De Trin.* x, 3,4); therefore, as though knowledge were not in equal proportion to mind, he takes three things in the soul which are proper to the mind, namely, memory, understanding, and will; which everyone is conscious of possessing; and assigns the image of the Trinity pre-eminently to these three, as though the first assignation were in part deficient.

Reply to Objection 3. As Augustine proves (*De Trin.* xiv, 7), we may be said to understand, will, and to love certain things, both when we actually consider them, and when we do not think of them. When they are not under our actual consideration, they are objects of our memory only, which, in his opinion, is nothing else than habitual retention of knowledge and love*. “But since,” as he says, “a word cannot be there without actual thought (for we think everything that we say, even if we speak with that interior word belonging to no nation’s tongue), this image chiefly consists in these three things, memory, understanding, and will. And by understanding I mean here that whereby we understand with actual thought; and by will, love, or dilection I mean that which unites this child with its parent.” From which it is clear that he places the image of the Divine Trinity more in actual understanding and will, than in these as existing in the habitual retention of the memory; although even thus the image of the Trinity exists in the soul in a certain degree, as he says in the same place. Thus it is clear that memory, understanding, and will are not three powers as stated in the Sentences.

Reply to Objection 4. Someone might answer by referring to Augustine’s statement (*De Trin.* xiv, 6), that “the mind ever remembers itself, ever understands itself, ever loves itself”; which some take to mean that the soul ever actually understands, and loves itself. But he excludes this interpretation by adding that “it does not always think of itself as actually distinct from other things.” Thus it is clear that the soul always understands and loves itself, not actually but habitually; though we might say that by perceiving its own act, it understands itself whenever it understands anything. But since it is not always actually understanding, as in the case of sleep, we must say that these acts, although not always actually existing, yet ever exist in their principles, the habits and powers. Wherefore, Augustine says (*De Trin.* xiv, 4): “If the rational soul is made to the image of God in the sense that it can make use of reason and intellect to understand and consider God, then the image of God was in the soul from the beginning of its existence.”

* Cf. q. 79, a. 7, ad 1

Objection 1. It would seem that the image of the Divine Trinity is in the soul not only by comparison with God as its object. For the image of the Divine Trinity is to be found in the soul, as shown above (a. 7), according as the word in us proceeds from the speaker; and love from both. But this is to be found in us as regards any object. Therefore the image of the Divine Trinity is in our mind as regards any object.

Objection 2. Further, Augustine says (De Trin. xii, 4) that “when we seek trinity in the soul, we seek it in the whole of the soul, without separating the process of reasoning in temporal matters from the consideration of things eternal.” Therefore the image of the Trinity is to be found in the soul, even as regards temporal objects.

Objection 3. Further, it is by grace that we can know and love God. If, therefore, the image of the Trinity is found in the soul by reason of the memory, understanding, and will or love of God, this image is not in man by nature but by grace, and thus is not common to all.

Objection 4. Further, the saints in heaven are most perfectly conformed to the image of God by the beatific vision; wherefore it is written (2 Cor. 3:18): “We... are transformed into the same image from glory to glory.” But temporal things are known by the beatific vision. Therefore the image of God exists in us even according to temporal things.

On the contrary, Augustine says (De Trin. xiv, 12): “The image of God exists in the mind, not because it has a remembrance of itself, loves itself, and understands itself; but because it can also remember, understand, and love God by Whom it was made.” Much less, therefore, is the image of God in the soul, in respect of other objects.

I answer that, As above explained (Aa. 2,7), image means a likeness which in some degree, however small, attains to a representation of the species. Wherefore we need to seek in the image of the Divine Trinity in the soul some kind of representation of species of the Divine Persons, so far as this is possible to a creature. Now the Divine Persons, as above stated (Aa. 6,7), are distinguished from each other according to the procession of the word from the speaker, and the procession of love from both. Moreover the Word of God is born of God by the knowledge of Himself; and Love proceeds from God according as He loves Himself. But it is clear that diversity of objects diversifies the species of word and love; for in the human mind the species of a stone is specifically different from that of a horse, which also the love regarding each of them is specifically different. Hence we refer the Divine image in man to the verbal concept born of the knowledge of God, and to the love derived therefrom. Thus the image of God is found in the soul according as the soul turns to God, or possesses a nature that enables it to turn to God.

Now the mind may turn towards an object in two ways: directly and immediately, or indirectly and mediately; as, for instance, when anyone sees a man reflected in a looking-glass he may be said to be turned towards that man. So Augustine says (De Trin. xiv, 8), the “the mind remembers itself, understands itself, and loves itself. If we perceive this, we perceive a trinity, not, indeed, God, but, nevertheless, rightly called the image of God.” But this is due to the fact, not that the mind reflects on itself absolutely, but that thereby it can furthermore turn to God, as appears from the authority quoted above (Arg. On the contrary).

Reply to Objection 1. For the notion of an image it is not enough that something proceed from another, but it is also necessary to observe what proceeds and whence it proceeds; namely, that what is Word of God proceeds from knowledge of God.

Reply to Objection 2. In all the soul we may see a kind of trinity, not, however, as though besides the action of temporal things and the contemplation of eternal things, “any third thing should be required to make up the trinity,” as he adds in the same passage. But in that part of the reason which is concerned with temporal things, “although a trinity may be found; yet the image of God is not to be seen there,” as he says farther on; forasmuch as this knowledge of temporal things is adventitious to the soul. Moreover even the habits whereby temporal things are known are not always present; but sometimes they are actually present, and sometimes present only in memory even after they begin to exist in the soul. Such is clearly the case with faith, which comes to us temporally for this present life; while in the future life faith will no longer exist, but only the remembrance of faith.

Reply to Objection 3. The meritorious knowledge and love of God can be in us only by grace. Yet there is a certain natural knowledge and love as seen above (q. 12, a. 12; q. 56, a. 3; q. 60, a. 5). This, too, is natural that the mind, in order to understand God, can make use of reason, in which sense we have already said that the image of God abides ever in the soul; “whether this image of God be so obsolete,” as it were clouded, “as almost to amount to nothing,” as in those who have not the use of reason; “or obscured and disfigured,” as in sinners; or “clear and beautiful,” as in the just; as Augustine says (De Trin. xiv, 6).

Reply to Objection 4. By the vision of glory temporal things will be seen in God Himself; and such a vision of things temporal will belong to the image of God. This is what Augustine means (De Trin. xiv, 6), when he says that “in that nature to which the mind will blissfully adhere, whatever it sees it will see as unchangeable”; for in the Uncreated Word are the types of all creatures.

Objection 1. It would seem that “likeness” is not properly distinguished from “image.” For “genus” is not properly distinguished from “species.” Now, “likeness” is to “image” as genus to species: because, “where there is image, forthwith there is likeness, but not conversely” as Augustine says (QQ. 83, qu. 74). Therefore “likeness” is not properly to be distinguished from “image.”

Objection 2. Further, the nature of the image consists not only in the representation of the Divine Persons, but also in the representation of the Divine Essence, to which representation belong immortality and indivisibility. So it is not true to say that the “likeness” is in the essence because it is immortal and indivisible; whereas the image is in other things” (Sent. ii, D, xvi).

Objection 3. Further, the image of God in man is threefold—the image of nature, of grace, and of glory, as above explained (a. 4). But innocence and righteousness belong to grace. Therefore it is incorrectly said (Sent. ii, D, xvi) “that the image is taken from the memory, the understanding and the will, while the likeness is from innocence and righteousness.”

Objection 4. Further, knowledge of truth belongs to the intellect, and love of virtue to the will; which two things are parts of the image. Therefore it is incorrect to say (Sent. ii, D, xvi) that “the image consists in the knowledge of truth, and the likeness in the love of virtue.”

On the contrary, Augustine says (QQ. 83, qu. 51): “Some consider that these two were mentioned not without reason, namely “image” and “likeness,” since, if they meant the same, one would have sufficed.”

I answer that, Likeness is a kind of unity, for oneness in quality causes likeness, as the Philosopher says (Metaph. v, Did. iv, 15). Now, since “one” is a transcendental, it is both common to all, and adapted to each single thing, just as the good and the true. Wherefore, as the good can be compared to each individual thing both as its preamble, and as subsequent to it, as signifying some perfection in it, so also in the same way there exists a kind of comparison between “likeness” and “image.” For the good is a preamble to man, inasmuch as man is an individual good; and, again, the good is subsequent to man, inasmuch as we may say of a certain man that he is good, by reason of his perfect virtue. In like manner, likeness may be considered in the light of a preamble to image, inasmuch as it is

something more general than image, as we have said above (a. 1): and, again, it may be considered as subsequent to image, inasmuch as it signifies a certain perfection of image. For we say that an image is like or unlike what it represents, according as the representation is perfect or imperfect. Thus likeness may be distinguished from image in two ways: first as its preamble and existing in more things, and in this sense likeness regards things which are more common than the intellectual properties, wherein the image is properly to be seen. In this sense it is stated (QQ. 83, qu. 51) that “the spirit” (namely, the mind) without doubt was made to the image of God. “But the other parts of man,” belonging to the soul’s inferior faculties, or even to the body, “are in the opinion of some made to God’s likeness.” In this sense he says (De Quant. Animae ii) that the likeness of God is found in the soul’s incorruptibility; for corruptible and incorruptible are differences of universal beings. But likeness may be considered in another way, as signifying the expression and perfection of the image. In this sense Damascene says (De Fide Orth. ii, 12) that the image implies “an intelligent being, endowed with free-will and self-movement, whereas likeness implies a likeness of power, as far as this may be possible in man.” In the same sense “likeness” is said to belong to “the love of virtue”: for there is no virtue without love of virtue.

Reply to Objection 1. “Likeness” is not distinct from “image” in the general notion of “likeness” (for thus it is included in “image”); but so far as any “likeness” falls short of “image,” or again, as it perfects the idea of “image.”

Reply to Objection 2. The soul’s essence belongs to the “image,” as representing the Divine Essence in those things which belong to the intellectual nature; but not in those conditions subsequent to general notions of being, such as simplicity and indissolubility.

Reply to Objection 3. Even certain virtues are natural to the soul, at least, in their seeds, by reason of which we may say that a natural “likeness” exists in the soul. Nor it is unfitting to us the term “image” from one point of view and from another the term “likeness.”

Reply to Objection 4. Love of the word, which is knowledge loved, belongs to the nature of “image”; but love of virtue belongs to “likeness,” as virtue itself belongs to likeness.

FIRST PART, QUESTION 94

Of the State and Condition of the First Man As Regards His Intellect (In Four Articles)

We next consider the state or condition of the first man; first, as regards his soul; secondly, as regards his body. Concerning the first there are two things to be considered: (1) The condition of man as to his intellect; (2) the condition of man as to his will.

Under the first head there are four points of inquiry:

- (1) Whether the first man saw the Essence of God?
- (2) Whether he could see the separate substances, that is, the angels?
- (3) Whether he possessed all knowledge?
- (4) Whether he could err or be deceived?

Whether the first man saw God through His Essence?

Ia q. 94 a. 1

Objection 1. It would seem that the first man saw God through His Essence. For man's happiness consists in the vision of the Divine Essence. But the first man, "while established in paradise, led a life of happiness in the enjoyment of all things," as Damascene says (*De Fide Orth.* ii, 11). And Augustine says (*De Civ. Dei* xiv, 10): "If man was gifted with the same tastes as now, how happy must he have been in paradise, that place of ineffable happiness!" Therefore the first man in paradise saw God through His Essence.

Objection 2. Further, Augustine says (*De Civ. Dei* xiv, loc. cit.) that "the first man lacked nothing which his good-will might obtain." But our good-will can obtain nothing better than the vision of the Divine Essence. Therefore man saw God through His Essence.

Objection 3. Further, the vision of God is His Essence is whereby God is seen without a medium or enigma. But man in the state of innocence "saw God immediately," as the Master of the Sentences asserts (*Sent.* iv, D, i). He also saw without an enigma, for an enigma implies obscurity, as Augustine says (*De Trin.* xv, 9). Now, obscurity resulted from sin. Therefore man in the primitive state saw God through His Essence.

On the contrary, The Apostle says (1 Cor. 15:46): "That was not first which is spiritual, but that which is natural." But to see God through His Essence is most spiritual. Therefore the first man in the primitive state of his natural life did not see God through His Essence.

I answer that, The first man did not see God through His Essence if we consider the ordinary state of that life; unless, perhaps, it be said that he saw God in a vision, when "God cast a deep sleep upon Adam" (*Gn.* 2:21). The reason is because, since in the Divine Essence is beatitude itself, the intellect of a man who sees the Divine Essence has the same relation to God as a man has to beatitude. Now it is clear that man cannot willingly be turned away from beatitude, since naturally and necessarily he desires it, and shuns unhappiness. Wherefore no one who sees the Essence of God can willingly turn away from God, which means to sin. Hence all who see God through His Essence are so

firmly established in the love of God, that for eternity they can never sin. Therefore, as Adam did sin, it is clear that he did not see God through His Essence.

Nevertheless he knew God with a more perfect knowledge than we do now. Thus in a sense his knowledge was midway between our knowledge in the present state, and the knowledge we shall have in heaven, when we see God through His Essence. To make this clear, we must consider that the vision of God through His Essence is contradistinguished from the vision of God through His creatures. Now the higher the creature is, and the more like it is to God, the more clearly is God seen in it; for instance, a man is seen more clearly through a mirror in which his image is the more clearly expressed. Thus God is seen in a much more perfect manner through His intelligible effects than through those which are only sensible or corporeal. But in his present state man is impeded as regards the full and clear consideration of intelligible creatures, because he is distracted by and occupied with sensible things. Now, it is written (*Eccles.* 7:30): "God made man right." And man was made right by God in this sense, that in him the lower powers were subjected to the higher, and the higher nature was made so as not to be impeded by the lower. Wherefore the first man was not impeded by exterior things from a clear and steady contemplation of the intelligible effects which he perceived by the radiation of the first truth, whether by a natural or by a gratuitous knowledge. Hence Augustine says (*Gen. ad lit.* xi, 33) that, "perhaps God used to speak to the first man as He speaks to the angels; by shedding on his mind a ray of the unchangeable truth, yet without bestowing on him the experience of which the angels are capable in the participation of the Divine Essence." Therefore, through these intelligible effects of God, man knew God then more clearly than we know Him now.

Reply to Objection 1. Man was happy in paradise, but not with that perfect happiness to which he was destined, which consists in the vision of the Divine Essence. He was, however, endowed with "a life of happiness in a certain measure," as Augustine says (*Gen. ad*

lit. xi, 18), so far as he was gifted with natural integrity and perfection.

Reply to Objection 2. A good will is a well-ordered will; but the will of the first man would have been ill-ordered had he wished to have, while in the state of merit, what had been promised to him as a reward.

Reply to Objection 3. A medium (of knowledge) is twofold; one through which, and, at the same time, in which, something is seen, as, for example, a man is seen through a mirror, and is seen with the mirror: another kind of medium is that whereby we attain to the knowledge of something unknown; such as the medium in a demonstration. God was seen without this second kind of medium, but not without the first kind. For there

was no need for the first man to attain to the knowledge of God by demonstration drawn from an effect, such as we need; since he knew God simultaneously in His effects, especially in the intelligible effects, according to His capacity. Again, we must remark that the obscurity which is implied in the word enigma may be of two kinds: first, so far as every creature is something obscure when compared with the immensity of the Divine light; and thus Adam saw God in an enigma, because he saw Him in a created effect: secondly, we may take obscurity as an effect of sin, so far as man is impeded in the consideration of intelligible things by being preoccupied with sensible things; in which sense Adam did not see God in an enigma.

Whether Adam in the state of innocence saw the angels through their essence?

Ia q. 94 a. 2

Objection 1. It would seem that Adam, in the state of innocence, saw the angels through their essence. For Gregory says (Dialog. iv, 1): “In paradise man was accustomed to enjoy the words of God; and by purity of heart and loftiness of vision to have the company of the good angels.”

Objection 2. Further, the soul in the present state is impeded from the knowledge of separate substances by union with a corruptible body which “is a load upon the soul,” as is written Wis. 9:15. Wherefore the separate soul can see separate substances, as above explained (q. 89, a. 2). But the body of the first man was not a load upon his soul; for the latter was not corruptible. Therefore he was able to see separate substances.

Objection 3. Further, one separate substance knows another separate substance, by knowing itself (De Causis xiii). But the soul of the first man knew itself. Therefore it knew separate substances.

On the contrary, The soul of Adam was of the same nature as ours. But our souls cannot now understand separate substances. Therefore neither could Adam’s soul.

I answer that, The state of the human soul may be distinguished in two ways. First, from a diversity of mode in its natural existence; and in this point the state of the separate soul is distinguished from the state of the soul joined to the body. Secondly, the state of the soul is distinguished in relation to integrity and corruption, the state of natural existence remaining the same: and thus the state of innocence is distinct from the state of man after sin. For man’s soul, in the state of innocence, was adapted to perfect and govern the body; wherefore the first man is said to have been made into a “living soul”; that is, a soul giving life to the body—namely animal life. But he was endowed with integrity as to this life, in that the body was entirely subject to the soul, hindering it in no way, as we have said above (a. 1). Now it is clear from what has been already said (q. 84, a. 7; q. 85, a. 1; q. 89, a. 1) that since the soul is adapted to perfect and govern the body, as regards animal life, it is fitting

that it should have that mode of understanding which is by turning to phantasms. Wherefore this mode of understanding was becoming to the soul of the first man also.

Now, in virtue of this mode of understanding, there are three degrees of movement in the soul, as Dionysius says (Div. Nom. iv). The first is by the soul “passing from exterior things to concentrate its powers on itself”; the second is by the soul ascending “so as to be associated with the united superior powers,” namely the angels; the third is when the soul is “led on” yet further “to the supreme good,” that is, to God.

In virtue of the first movement of the soul from exterior things to itself, the soul’s knowledge is perfected. This is because the intellectual operation of the soul has a natural order to external things, as we have said above (q. 87, a. 3): and so by the knowledge thereof, our intellectual operation can be known perfectly, as an act through its object. And through the intellectual operation itself, the human intellect can be known perfectly, as a power through its proper act. But in the second movement we do not find perfect knowledge. Because, since the angel does not understand by turning to phantasms, but by a far more excellent process, as we have said above (q. 55, a. 2); the above-mentioned mode of knowledge, by which the soul knows itself, is not sufficient to lead it to the knowledge of an angel. Much less does the third movement lead to perfect knowledge: for even the angels themselves, by the fact that they know themselves, are not able to arrive at the knowledge of the Divine Substance, by reason of its surpassing excellence. Therefore the soul of the first man could not see the angels in their essence. Nevertheless he had a more excellent mode of knowledge regarding the angels than we possess, because his knowledge of intelligible things within him was more certain and fixed than our knowledge. And it was on account of this excellence of knowledge that Gregory says that “he enjoyed the company of the angelic spirits.”

This makes clear the reply to the first objection.

Reply to Objection 2. That the soul of the first man fell short of the knowledge regarding separate substances, was not owing to the fact that the body was a load upon it; but to the fact that its connatural object fell short of the excellence of separate substances. We, in our present state, fall short on account of both these

reasons.

Reply to Objection 3. The soul of the first man was not able to arrive at knowledge of separate substances by means of its self-knowledge, as we have shown above; for even each separate substance knows others in its own measure.

Whether the first man knew all things?

Ia q. 94 a. 3

Objection 1. It would seem that the first man did not know all things. For if he had such knowledge it would be either by acquired species, or by connatural species, or by infused species. Not, however, by acquired species; for this kind of knowledge is acquired by experience, as stated in *Metaph. i, 1*; and the first man had not then gained experience of all things. Nor through connatural species, because he was of the same nature as we are; and our soul, as Aristotle says (*De Anima iii, 4*), is “like a clean tablet on which nothing is written.” And if his knowledge came by infused species, it would have been of a different kind from ours, which we acquire from things themselves.

Objection 2. Further, individuals of the same species have the same way of arriving at perfection. Now other men have not, from the beginning, knowledge of all things, but they acquire it in the course of time according to their capacity. Therefore neither did Adam know all things when he was first created.

Objection 3. Further, the present state of life is given to man in order that his soul may advance in knowledge and merit; indeed, the soul seems to be united to the body for that purpose. Now man would have advanced in merit in that state of life; therefore also in knowledge. Therefore he was not endowed with knowledge of all things.

On the contrary, Man named the animals (*Gn. 2:20*). But names should be adapted to the nature of things. Therefore Adam knew the animals’ natures; and in like manner he was possessed of the knowledge of all other things.

I answer that, In the natural order, perfection comes before imperfection, as act precedes potentiality; for whatever is in potentiality is made actual only by something actual. And since God created things not only for their own existence, but also that they might be the principles of other things; so creatures were produced in their perfect state to be the principles as regards others. Now man can be the principle of another man, not only by generation of the body, but also by instruction and government. Hence, as the first man was produced in his perfect state, as regards his body, for the work of generation, so also was his soul established in

a perfect state to instruct and govern others.

Now no one can instruct others unless he has knowledge, and so the first man was established by God in such a manner as to have knowledge of all those things for which man has a natural aptitude. And such are whatever are virtually contained in the first self-evident principles, that is, whatever truths man is naturally able to know. Moreover, in order to direct his own life and that of others, man needs to know not only those things which can be naturally known, but also things surpassing natural knowledge; because the life of man is directed to a supernatural end: just as it is necessary for us to know the truths of faith in order to direct our own lives. Wherefore the first man was endowed with such a knowledge of these supernatural truths as was necessary for the direction of human life in that state. But those things which cannot be known by merely human effort, and which are not necessary for the direction of human life, were not known by the first man; such as the thoughts of men, future contingent events, and some individual facts, as for instance the number of pebbles in a stream; and the like.

Reply to Objection 1. The first man had knowledge of all things by divinely infused species. Yet his knowledge was not different from ours; as the eyes which Christ gave to the man born blind were not different from those given by nature.

Reply to Objection 2. To Adam, as being the first man, was due to a degree of perfection which was not due to other men, as is clear from what is above explained.

Reply to Objection 3. Adam would have advanced in natural knowledge, not in the number of things known, but in the manner of knowing; because what he knew speculatively he would subsequently have known by experience. But as regards supernatural knowledge, he would also have advanced as regards the number of things known, by further revelation; as the angels advance by further enlightenment. Moreover there is no comparison between advance in knowledge and advance in merit; since one man cannot be a principle of merit to another, although he can be to another a principle of knowledge.

Objection 1. It would seem that man in his primitive state could have been deceived. For the Apostle says (1 Tim. 2:14) that “the woman being seduced was in the transgression.”

Objection 2. Further, the Master says (Sent. ii, D, xxi) that, “the woman was not frightened at the serpent speaking, because she thought that he had received the faculty of speech from God.” But this was untrue. Therefore before sin the woman was deceived.

Objection 3. Further, it is natural that the farther off anything is from us, the smaller it seems to be. Now, the nature of the eyes is not changed by sin. Therefore this would have been the case in the state of innocence. Wherefore man would have been deceived in the size of what he saw, just as he is deceived now.

Objection 4. Further, Augustine says (Gen. ad lit. xii, 2) that, in sleep the soul adheres to the images of things as if they were the things themselves. But in the state of innocence man would have eaten and consequently have slept and dreamed. Therefore he would have been deceived, adhering to images as to realities.

Objection 5. Further, the first man would have been ignorant of other men’s thoughts, and of future contingent events, as stated above (a. 3). So if anyone had told him what was false about these things, he would have been deceived.

On the contrary, Augustine says (De Lib. Arb. iii, 18): “To regard what is true as false, is not natural to man as created; but is a punishment of man condemned.”

I answer that, in the opinion of some, deception may mean two things; namely, any slight surmise, in which one adheres to what is false, as though it were true, but without the assent of belief—or it may mean a firm belief. Thus before sin Adam could not be deceived in either of these ways as regards those things to which his knowledge extended; but as regards things to which his knowledge did not extend, he might have been deceived, if we take deception in the wide sense of the term for any surmise without assent of belief. This opinion was held with the idea that it is not derogatory to man to entertain a false opinion in such matters, and that provided he does not assent rashly, he is not to be blamed.

Such an opinion, however, is not fitting as regards the integrity of the primitive state of life; because, as Augustine says (De Civ. Dei xiv, 10), in that state of life “sin was avoided without struggle, and while it remained so, no evil could exist.” Now it is clear that as truth is the good of the intellect, so falsehood is its evil, as the Philosopher says (Ethic. vi, 2). So that, as long as the state of innocence continued, it was impossible for the human intellect to assent to falsehood as

if it were truth. For as some perfections, such as clarity, were lacking in the bodily members of the first man, though no evil could be therein; so there could be in his intellect the absence of some knowledge, but no false opinion.

This is clear also from the very rectitude of the primitive state, by virtue of which, while the soul remained subject to God, the lower faculties in man were subject to the higher, and were no impediment to their action. And from what has preceded (q. 85, a. 6), it is clear that as regards its proper object the intellect is ever true; and hence it is never deceived of itself; but whatever deception occurs must be ascribed to some lower faculty, such as the imagination or the like. Hence we see that when the natural power of judgment is free we are not deceived by such images, but only when it is not free, as is the case in sleep. Therefore it is clear that the rectitude of the primitive state was incompatible with deception of the intellect.

Reply to Objection 1. Though the woman was deceived before she sinned in deed, still it was not till she had already sinned by interior pride. For Augustine says (Gen. ad lit. xi, 30) that “the woman could not have believed the words of the serpent, had she not already acquiesced in the love of her own power, and in a presumption of self-conceit.”

Reply to Objection 2. The woman thought that the serpent had received this faculty, not as acting in accordance with nature, but by virtue of some supernatural operation. We need not, however, follow the Master of the Sentences in this point.

Reply to Objection 3. Were anything presented to the imagination or sense of the first man, not in accordance with the nature of things, he would not have been deceived, for his reason would have enabled him to judge the truth.

Reply to Objection 4. A man is not accountable for what occurs during sleep; as he has not then the use of his reason, wherein consists man’s proper action.

Reply to Objection 5. If anyone had said something untrue as regards future contingencies, or as regards secret thoughts, man in the primitive state would not have believed it was so: but he might have believed that such a thing was possible; which would not have been to entertain a false opinion.

It might also be said that he would have been divinely guided from above, so as not to be deceived in a matter to which his knowledge did not extend.

If any object, as some do, that he was not guided, when tempted, though he was then most in need of guidance, we reply that man had already sinned in his heart, and that he failed to have recourse to the Divine aid.

Objection 1. It would seem that the first man saw God through His Essence. For man's happiness consists in the vision of the Divine Essence. But the first man, "while established in paradise, led a life of happiness in the enjoyment of all things," as Damascene says (*De Fide Orth.* ii, 11). And Augustine says (*De Civ. Dei* xiv, 10): "If man was gifted with the same tastes as now, how happy must he have been in paradise, that place of ineffable happiness!" Therefore the first man in paradise saw God through His Essence.

Objection 2. Further, Augustine says (*De Civ. Dei* xiv, loc. cit.) that "the first man lacked nothing which his good-will might obtain." But our good-will can obtain nothing better than the vision of the Divine Essence. Therefore man saw God through His Essence.

Objection 3. Further, the vision of God is His Essence is whereby God is seen without a medium or enigma. But man in the state of innocence "saw God immediately," as the Master of the Sentences asserts (*Sent.* iv, D, i). He also saw without an enigma, for an enigma implies obscurity, as Augustine says (*De Trin.* xv, 9). Now, obscurity resulted from sin. Therefore man in the primitive state saw God through His Essence.

On the contrary, The Apostle says (1 Cor. 15:46): "That was not first which is spiritual, but that which is natural." But to see God through His Essence is most spiritual. Therefore the first man in the primitive state of his natural life did not see God through His Essence.

I answer that, The first man did not see God through His Essence if we consider the ordinary state of that life; unless, perhaps, it be said that he saw God in a vision, when "God cast a deep sleep upon Adam" (*Gn.* 2:21). The reason is because, since in the Divine Essence is beatitude itself, the intellect of a man who sees the Divine Essence has the same relation to God as a man has to beatitude. Now it is clear that man cannot willingly be turned away from beatitude, since naturally and necessarily he desires it, and shuns unhappiness. Wherefore no one who sees the Essence of God can willingly turn away from God, which means to sin. Hence all who see God through His Essence are so firmly established in the love of God, that for eternity they can never sin. Therefore, as Adam did sin, it is clear that he did not see God through His Essence.

Nevertheless he knew God with a more perfect knowledge than we do now. Thus in a sense his knowledge was midway between our knowledge in the present state, and the knowledge we shall have in heaven, when we see God through His Essence. To make this clear, we must consider that the vision of God through His Essence is contradistinguished from the vision of God through His creatures. Now the higher the creature is, and the more like it is to God, the more clearly is God seen in it; for instance, a man is seen more clearly through a mirror in which his image is the more clearly

expressed. Thus God is seen in a much more perfect manner through His intelligible effects than through those which are only sensible or corporeal. But in his present state man is impeded as regards the full and clear consideration of intelligible creatures, because he is distracted by and occupied with sensible things. Now, it is written (*Eccles.* 7:30): "God made man right." And man was made right by God in this sense, that in him the lower powers were subjected to the higher, and the higher nature was made so as not to be impeded by the lower. Wherefore the first man was not impeded by exterior things from a clear and steady contemplation of the intelligible effects which he perceived by the radiation of the first truth, whether by a natural or by a gratuitous knowledge. Hence Augustine says (*Gen.* ad lit. xi, 33) that, "perhaps God used to speak to the first man as He speaks to the angels; by shedding on his mind a ray of the unchangeable truth, yet without bestowing on him the experience of which the angels are capable in the participation of the Divine Essence." Therefore, through these intelligible effects of God, man knew God then more clearly than we know Him now.

Reply to Objection 1. Man was happy in paradise, but not with that perfect happiness to which he was destined, which consists in the vision of the Divine Essence. He was, however, endowed with "a life of happiness in a certain measure," as Augustine says (*Gen.* ad lit. xi, 18), so far as he was gifted with natural integrity and perfection.

Reply to Objection 2. A good will is a well-ordered will; but the will of the first man would have been ill-ordered had he wished to have, while in the state of merit, what had been promised to him as a reward.

Reply to Objection 3. A medium (of knowledge) is twofold; one through which, and, at the same time, in which, something is seen, as, for example, a man is seen through a mirror, and is seen with the mirror: another kind of medium is that whereby we attain to the knowledge of something unknown; such as the medium in a demonstration. God was seen without this second kind of medium, but not without the first kind. For there was no need for the first man to attain to the knowledge of God by demonstration drawn from an effect, such as we need; since he knew God simultaneously in His effects, especially in the intelligible effects, according to His capacity. Again, we must remark that the obscurity which is implied in the word enigma may be of two kinds: first, so far as every creature is something obscure when compared with the immensity of the Divine light; and thus Adam saw God in an enigma, because he saw Him in a created effect: secondly, we may take obscurity as an effect of sin, so far as man is impeded in the consideration of intelligible things by being preoccupied with sensible things; in which sense Adam did not see God in an enigma.

Objection 1. It would seem that Adam, in the state of innocence, saw the angels through their essence. For Gregory says (*Dialog.* iv, 1): “In paradise man was accustomed to enjoy the words of God; and by purity of heart and loftiness of vision to have the company of the good angels.”

Objection 2. Further, the soul in the present state is impeded from the knowledge of separate substances by union with a corruptible body which “is a load upon the soul,” as is written *Wis.* 9:15. Wherefore the separate soul can see separate substances, as above explained (q. 89, a. 2). But the body of the first man was not a load upon his soul; for the latter was not corruptible. Therefore he was able to see separate substances.

Objection 3. Further, one separate substance knows another separate substance, by knowing itself (*De Causis* xiii). But the soul of the first man knew itself. Therefore it knew separate substances.

On the contrary, The soul of Adam was of the same nature as ours. But our souls cannot now understand separate substances. Therefore neither could Adam’s soul.

I answer that, The state of the human soul may be distinguished in two ways. First, from a diversity of mode in its natural existence; and in this point the state of the separate soul is distinguished from the state of the soul joined to the body. Secondly, the state of the soul is distinguished in relation to integrity and corruption, the state of natural existence remaining the same: and thus the state of innocence is distinct from the state of man after sin. For man’s soul, in the state of innocence, was adapted to perfect and govern the body; wherefore the first man is said to have been made into a “living soul”; that is, a soul giving life to the body—namely animal life. But he was endowed with integrity as to this life, in that the body was entirely subject to the soul, hindering it in no way, as we have said above (a. 1). Now it is clear from what has been already said (q. 84, a. 7; q. 85, a. 1; q. 89, a. 1) that since the soul is adapted to perfect and govern the body, as regards animal life, it is fitting that it should have that mode of understanding which is by turning to phantasms. Wherefore this mode of understanding was becoming to the soul of the first man also.

Now, in virtue of this mode of understanding, there are three degrees of movement in the soul, as Dionysius

says (*Div. Nom.* iv). The first is by the soul “passing from exterior things to concentrate its powers on itself”; the second is by the soul ascending “so as to be associated with the united superior powers,” namely the angels; the third is when the soul is “led on” yet further “to the supreme good,” that is, to God.

In virtue of the first movement of the soul from exterior things to itself, the soul’s knowledge is perfected. This is because the intellectual operation of the soul has a natural order to external things, as we have said above (q. 87, a. 3): and so by the knowledge thereof, our intellectual operation can be known perfectly, as an act through its object. And through the intellectual operation itself, the human intellect can be known perfectly, as a power through its proper act. But in the second movement we do not find perfect knowledge. Because, since the angel does not understand by turning to phantasms, but by a far more excellent process, as we have said above (q. 55, a. 2); the above-mentioned mode of knowledge, by which the soul knows itself, is not sufficient to lead it to the knowledge of an angel. Much less does the third movement lead to perfect knowledge: for even the angels themselves, by the fact that they know themselves, are not able to arrive at the knowledge of the Divine Substance, by reason of its surpassing excellence. Therefore the soul of the first man could not see the angels in their essence. Nevertheless he had a more excellent mode of knowledge regarding the angels than we possess, because his knowledge of intelligible things within him was more certain and fixed than our knowledge. And it was on account of this excellence of knowledge that Gregory says that “he enjoyed the company of the angelic spirits.”

This makes clear the reply to the first objection.

Reply to Objection 2. That the soul of the first man fell short of the knowledge regarding separate substances, was not owing to the fact that the body was a load upon it; but to the fact that its connatural object fell short of the excellence of separate substances. We, in our present state, fall short on account of both these reasons.

Reply to Objection 3. The soul of the first man was not able to arrive at knowledge of separate substances by means of its self-knowledge, as we have shown above; for even each separate substance knows others in its own measure.

Objection 1. It would seem that the first man did not know all things. For if he had such knowledge it would be either by acquired species, or by connatural species, or by infused species. Not, however, by acquired species; for this kind of knowledge is acquired by experience, as stated in *Metaph.* i, 1; and the first man had not then gained experience of all things. Nor through connatural species, because he was of the same nature as we are; and our soul, as Aristotle says (*De Anima* iii, 4), is “like a clean tablet on which nothing is written.” And if his knowledge came by infused species, it would have been of a different kind from ours, which we acquire from things themselves.

Objection 2. Further, individuals of the same species have the same way of arriving at perfection. Now other men have not, from the beginning, knowledge of all things, but they acquire it in the course of time according to their capacity. Therefore neither did Adam know all things when he was first created.

Objection 3. Further, the present state of life is given to man in order that his soul may advance in knowledge and merit; indeed, the soul seems to be united to the body for that purpose. Now man would have advanced in merit in that state of life; therefore also in knowledge. Therefore he was not endowed with knowledge of all things.

On the contrary, Man named the animals (*Gn.* 2:20). But names should be adapted to the nature of things. Therefore Adam knew the animals’ natures; and in like manner he was possessed of the knowledge of all other things.

I answer that, In the natural order, perfection comes before imperfection, as act precedes potentiality; for whatever is in potentiality is made actual only by something actual. And since God created things not only for their own existence, but also that they might be the principles of other things; so creatures were produced in their perfect state to be the principles as regards others. Now man can be the principle of another man, not only by generation of the body, but also by instruction and government. Hence, as the first man was produced in his perfect state, as regards his body, for the work of generation, so also was his soul established in

a perfect state to instruct and govern others.

Now no one can instruct others unless he has knowledge, and so the first man was established by God in such a manner as to have knowledge of all those things for which man has a natural aptitude. And such are whatever are virtually contained in the first self-evident principles, that is, whatever truths man is naturally able to know. Moreover, in order to direct his own life and that of others, man needs to know not only those things which can be naturally known, but also things surpassing natural knowledge; because the life of man is directed to a supernatural end: just as it is necessary for us to know the truths of faith in order to direct our own lives. Wherefore the first man was endowed with such a knowledge of these supernatural truths as was necessary for the direction of human life in that state. But those things which cannot be known by merely human effort, and which are not necessary for the direction of human life, were not known by the first man; such as the thoughts of men, future contingent events, and some individual facts, as for instance the number of pebbles in a stream; and the like.

Reply to Objection 1. The first man had knowledge of all things by divinely infused species. Yet his knowledge was not different from ours; as the eyes which Christ gave to the man born blind were not different from those given by nature.

Reply to Objection 2. To Adam, as being the first man, was due to a degree of perfection which was not due to other men, as is clear from what is above explained.

Reply to Objection 3. Adam would have advanced in natural knowledge, not in the number of things known, but in the manner of knowing; because what he knew speculatively he would subsequently have known by experience. But as regards supernatural knowledge, he would also have advanced as regards the number of things known, by further revelation; as the angels advance by further enlightenment. Moreover there is no comparison between advance in knowledge and advance in merit; since one man cannot be a principle of merit to another, although he can be to another a principle of knowledge.

Objection 1. It would seem that man in his primitive state could have been deceived. For the Apostle says (1 Tim. 2:14) that “the woman being seduced was in the transgression.”

Objection 2. Further, the Master says (Sent. ii, D, xxi) that, “the woman was not frightened at the serpent speaking, because she thought that he had received the faculty of speech from God.” But this was untrue. Therefore before sin the woman was deceived.

Objection 3. Further, it is natural that the farther off anything is from us, the smaller it seems to be. Now, the nature of the eyes is not changed by sin. Therefore this would have been the case in the state of innocence. Wherefore man would have been deceived in the size of what he saw, just as he is deceived now.

Objection 4. Further, Augustine says (Gen. ad lit. xii, 2) that, in sleep the soul adheres to the images of things as if they were the things themselves. But in the state of innocence man would have eaten and consequently have slept and dreamed. Therefore he would have been deceived, adhering to images as to realities.

Objection 5. Further, the first man would have been ignorant of other men’s thoughts, and of future contingent events, as stated above (a. 3). So if anyone had told him what was false about these things, he would have been deceived.

On the contrary, Augustine says (De Lib. Arb. iii, 18): “To regard what is true as false, is not natural to man as created; but is a punishment of man condemned.”

I answer that, in the opinion of some, deception may mean two things; namely, any slight surmise, in which one adheres to what is false, as though it were true, but without the assent of belief—or it may mean a firm belief. Thus before sin Adam could not be deceived in either of these ways as regards those things to which his knowledge extended; but as regards things to which his knowledge did not extend, he might have been deceived, if we take deception in the wide sense of the term for any surmise without assent of belief. This opinion was held with the idea that it is not derogatory to man to entertain a false opinion in such matters, and that provided he does not assent rashly, he is not to be blamed.

Such an opinion, however, is not fitting as regards the integrity of the primitive state of life; because, as Augustine says (De Civ. Dei xiv, 10), in that state of life “sin was avoided without struggle, and while it remained so, no evil could exist.” Now it is clear that as truth is the good of the intellect, so falsehood is its evil, as the Philosopher says (Ethic. vi, 2). So that, as long as the state of innocence continued, it was impossible for the human intellect to assent to falsehood as

if it were truth. For as some perfections, such as clarity, were lacking in the bodily members of the first man, though no evil could be therein; so there could be in his intellect the absence of some knowledge, but no false opinion.

This is clear also from the very rectitude of the primitive state, by virtue of which, while the soul remained subject to God, the lower faculties in man were subject to the higher, and were no impediment to their action. And from what has preceded (q. 85, a. 6), it is clear that as regards its proper object the intellect is ever true; and hence it is never deceived of itself; but whatever deception occurs must be ascribed to some lower faculty, such as the imagination or the like. Hence we see that when the natural power of judgment is free we are not deceived by such images, but only when it is not free, as is the case in sleep. Therefore it is clear that the rectitude of the primitive state was incompatible with deception of the intellect.

Reply to Objection 1. Though the woman was deceived before she sinned in deed, still it was not till she had already sinned by interior pride. For Augustine says (Gen. ad lit. xi, 30) that “the woman could not have believed the words of the serpent, had she not already acquiesced in the love of her own power, and in a presumption of self-conceit.”

Reply to Objection 2. The woman thought that the serpent had received this faculty, not as acting in accordance with nature, but by virtue of some supernatural operation. We need not, however, follow the Master of the Sentences in this point.

Reply to Objection 3. Were anything presented to the imagination or sense of the first man, not in accordance with the nature of things, he would not have been deceived, for his reason would have enabled him to judge the truth.

Reply to Objection 4. A man is not accountable for what occurs during sleep; as he has not then the use of his reason, wherein consists man’s proper action.

Reply to Objection 5. If anyone had said something untrue as regards future contingencies, or as regards secret thoughts, man in the primitive state would not have believed it was so: but he might have believed that such a thing was possible; which would not have been to entertain a false opinion.

It might also be said that he would have been divinely guided from above, so as not to be deceived in a matter to which his knowledge did not extend.

If any object, as some do, that he was not guided, when tempted, though he was then most in need of guidance, we reply that man had already sinned in his heart, and that he failed to have recourse to the Divine aid.

FIRST PART, QUESTION 95

Of Things Pertaining to the First Man's Will—Namely, Grace and Righteousness (In Four Articles)

We next consider what belongs to the will of the first man; concerning which there are two points of treatment: (1) the grace and righteousness of the first man; (2) the use of righteousness as regards his dominion over other things.

Under the first head there are four points of inquiry:

- (1) Whether the first man was created in grace?
- (2) Whether in the state of innocence he had passions of the soul?
- (3) Whether he had all virtues?
- (4) Whether what he did would have been as meritorious as now?

Whether the first man was created in grace?

Ia q. 95 a. 1

Objection 1. It would seem that the first man was not created in grace. For the Apostle, distinguishing between Adam and Christ, says (1 Cor. 15:45): "The first Adam was made into a living soul; the last Adam into a quickening spirit." But the spirit is quickened by grace. Therefore Christ alone was made in grace.

Objection 2. Further, Augustine says (QQ. Vet. et Nov. Test., qu. 123)* that "Adam did not possess the Holy Ghost." But whoever possesses grace has the Holy Ghost. Therefore Adam was not created in grace.

Objection 3. Further, Augustine says (De Correp. et Grat. x) that "God so ordered the life of the angels and men, as to show first what they could do by free-will, then what they could do by His grace, and by the discernment of righteousness." God thus first created men and angels in the state of natural free-will only; and afterwards bestowed grace on them.

Objection 4. Further, the Master says (Sent. ii, D, xxiv): "When man was created he was given sufficient help to stand, but not sufficient to advance." But whoever has grace can advance by merit. Therefore the first man was not created in grace.

Objection 5. Further, the reception of grace requires the consent of the recipient, since thereby a kind of spiritual marriage takes place between God and the soul. But consent presupposes existence. Therefore man did not receive grace in the first moment of his creation.

Objection 6. Further, nature is more distant from grace than grace is from glory, which is but grace consummated. But in man grace precedes glory. Therefore much more did nature precede grace.

On the contrary, Man and angel are both ordained to grace. But the angels were created in grace, for Augustine says (De Civ. Dei xii, 9): "God at the same time fashioned their nature and endowed them with grace." Therefore man also was created in grace.

I answer that, Some say that man was not created in grace; but that it was bestowed on him subsequently

before sin; and many authorities of the Saints declare that man possessed grace in the state of innocence.

But the very rectitude of the primitive state, where-with man was endowed by God, seems to require that, as others say, he was created in grace, according to Eccles. 7:30, "God made man right." For this rectitude consisted in his reason being subject to God, the lower powers to reason, and the body to the soul: and the first subjection was the cause of both the second and the third; since while reason was subject to God, the lower powers remained subject to reason, as Augustine says[†]. Now it is clear that such a subjection of the body to the soul and of the lower powers to reason, was not from nature; otherwise it would have remained after sin; since even in the demons the natural gifts remained after sin, as Dionysius declared (Div. Nom. iv). Hence it is clear that also the primitive subjection by virtue of which reason was subject to God, was not a merely natural gift, but a supernatural endowment of grace; for it is not possible that the effect should be of greater efficiency than the cause. Hence Augustine says (De Civ. Dei xiii, 13) that, "as soon as they disobeyed the Divine command, and forfeited Divine grace, they were ashamed of their nakedness, for they felt the impulse of disobedience in the flesh, as though it were a punishment corresponding to their own disobedience." Hence if the loss of grace dissolved the obedience of the flesh to the soul, we may gather that the inferior powers were subjected to the soul through grace existing therein.

Reply to Objection 1. The Apostle in these words means to show that there is a spiritual body, if there is an animal body, inasmuch as the spiritual life of the body began in Christ, who is "the firstborn of the dead," as the body's animal life began in Adam. From the Apostle's words, therefore, we cannot gather that Adam had no spiritual life in his soul; but that he had not spiritual life as regards the body.

Reply to Objection 2. As Augustine says in the same passage, it is not disputed that Adam, like other

* Work of an anonymous author, among the supposititious works of St. Augustine † Cf. De Civ. Dei xiii, 13; De Pecc. Merit. et Remiss. i, 16

just souls, was in some degree gifted with the Holy Ghost; but “he did not possess the Holy Ghost, as the faithful possess Him now,” who are admitted to eternal happiness directly after death.

Reply to Objection 3. This passage from Augustine does not assert that angels or men were created with natural free-will before they possessed grace; but that God shows first what their free-will could do before being confirmed in grace, and what they acquired afterwards by being so confirmed.

Reply to Objection 4. The Master here speaks according to the opinion of those who held that man was

not created in grace, but only in a state of nature. We may also say that, though man was created in grace, yet it was not by virtue of the nature wherein he was created that he could advance by merit, but by virtue of the grace which was added.

Reply to Objection 5. As the motion of the will is not continuous there is nothing against the first man having consented to grace even in the first moment of his existence.

Reply to Objection 6. We merit glory by an act of grace; but we do not merit grace by an act of nature; hence the comparison fails.

Whether passions existed in the soul of the first man?

Ia q. 95 a. 2

Objection 1. It would seem that the first man’s soul had no passions. For by the passions of the soul “the flesh lusteth against the spirit” (Gal. 5:7). But this did not happen in the state of innocence. Therefore in the state of innocence there were no passions of the soul.

Objection 2. Further, Adam’s soul was nobler than his body. But his body was impassible. Therefore no passions were in his soul.

Objection 3. Further, the passions of the soul are restrained by the moral virtues. But in Adam the moral virtues were perfect. Therefore the passions were entirely excluded from him.

On the contrary, Augustine says (De Civ. Dei xiv, 10) that “in our first parents there was undisturbed love of God,” and other passions of the soul.

I answer that, The passions of the soul are in the sensual appetite, the object of which is good and evil. Wherefore some passions of the soul are directed to what is good, as love and joy; others to what is evil, as fear and sorrow. And since in the primitive state, evil was neither present nor imminent, nor was any good wanting which a good-will could desire to have then, as Augustine says (De Civ. Dei xiv, 10), therefore Adam had no passion with evil as its object; such as fear, sorrow, and the like; neither had he passions in respect of good not possessed, but to be possessed then, as burning concupiscence. But those passions which regard present

good, as joy and love; or which regard future good to be had at the proper time, as desire and hope that casteth not down, existed in the state of innocence; otherwise, however, than as they exist in ourselves. For our sensual appetite, wherein the passions reside, is not entirely subject to reason; hence at times our passions forestall and hinder reason’s judgment; at other times they follow reason’s judgment, accordingly as the sensual appetite obeys reason to some extent. But in the state of innocence the inferior appetite was wholly subject to reason: so that in that state the passions of the soul existed only as consequent upon the judgment of reason.

Reply to Objection 1. The flesh lusts against the spirit by the rebellion of the passions against reason; which could not occur in the state of innocence.

Reply to Objection 2. The human body was impassible in the state of innocence as regards the passions which alter the disposition of nature, as will be explained later on (q. 97, a. 2); likewise the soul was impassible as regards the passions which impede the free use of reason.

Reply to Objection 3. Perfection of moral virtue does not wholly take away the passions, but regulates them; for the temperate man desires as he ought to desire, and what he ought to desire, as stated in Ethic. iii, 11.

Whether Adam had all the virtues?

Ia q. 95 a. 3

Objection 1. It would seem that Adam had not all the virtues. For some virtues are directed to curb passions: thus immoderate concupiscence is restrained by temperance, and immoderate fear by fortitude. But in the state of innocence no immoderation existed in the passions. Therefore neither did these virtues then exist.

Objection 2. Further, some virtues are concerned with the passions which have evil as their object; as meekness with anger; fortitude with fear. But these passions did not exist in the state of innocence, as stated above (a. 2). Therefore neither did those virtues exist then.

Objection 3. Further, penance is a virtue that regards sin committed. Mercy, too, is a virtue concerned with unhappiness. But in the state of innocence neither sin nor unhappiness existed. Therefore neither did those virtues exist.

Objection 4. Further, perseverance is a virtue. But Adam possessed it not; as proved by his subsequent sin. Therefore he possessed not every virtue.

Objection 5. Further, faith is a virtue. But it did not exist in the state of innocence; for it implies an obscurity of knowledge which seems to be incompatible with the perfection of the primitive state.

On the contrary, Augustine says, in a homily (Serm. contra Judaeos): “The prince of sin overcame Adam who was made from the slime of the earth to the image of God, adorned with modesty, restrained by temperance, refulgent with brightness.”

I answer that, in the state of innocence man in a certain sense possessed all the virtues; and this can be proved from what precedes. For it was shown above (a. 1) that such was the rectitude of the primitive state, that reason was subject to God, and the lower powers to reason. Now the virtues are nothing but those perfections whereby reason is directed to God, and the inferior powers regulated according to the dictate of reason, as will be explained in the Treatise on the Virtues (Ia IIae, q. 63, a. 2). Wherefore the rectitude of the primitive state required that man should in a sense possess every virtue.

It must, however, be noted that some virtues of their very nature do not involve imperfection, such as charity and justice; and these virtues did exist in the primitive state absolutely, both in habit and in act. But other virtues are of such a nature as to imply imperfection either in their act, or on the part of the matter. If such imperfection be consistent with the perfection of the primitive state, such virtues necessarily existed in that state; as faith, which is of things not seen, and hope which is of things not yet possessed. For the perfection of that state did not extend to the vision of the Divine Essence, and the possession of God with the enjoyment of final beatitude. Hence faith and hope could exist in the primitive state, both as to habit and as to act. But any virtue which implies imperfection incompatible with the perfection of the primitive state, could exist in that state as a habit, but not as to the act; for instance, penance, which is sorrow for sin committed; and mercy, which is sorrow for others’ unhappiness; because sorrow, guilt, and unhappiness are incompatible with the perfection of the primitive state. Wherefore such virtues existed as habits in the first man, but not as to their acts; for he was so disposed that he would repent, if there had been a sin to repent for; and had he seen unhappiness in his neighbor, he would have done his best to remedy it. This is in accordance with what the Philosopher says, “Shame,

which regards what is ill done, may be found in a virtuous man, but only conditionally; as being so disposed that he would be ashamed if he did wrong” (Ethic. iv, 9).

Reply to Objection 1. It is accidental to temperance and fortitude to subdue superabundant passion, in so far as they are in a subject which happens to have superabundant passions, and yet those virtues are ‘per se’ competent to moderate the passions.

Reply to Objection 2. Passions which have evil for their object were incompatible with the perfection of the primitive state, if that evil be in the one affected by the passion; such as fear and sorrow. But passions which relate to evil in another are not incompatible with the perfection of the primitive state; for in that state man could hate the demons’ malice, as he could love God’s goodness. Thus the virtues which relate to such passions could exist in the primitive state, in habit and in act. Virtues, however, relating to passions which regard evil in the same subject, if relating to such passions only, could not exist in the primitive state in act, but only in habit, as we have said above of penance and of mercy. But other virtues there are which have relation not to such passions only, but to others; such as temperance, which relates not only to sorrow, but also to joy; and fortitude, which relates not only to fear, but also to daring and hope. Thus the act of temperance could exist in the primitive state, so far as it moderates pleasure; and in like manner, fortitude, as moderating daring and hope, but not as moderating sorrow and fear.

Reply to Objection 3. appears from what has been said above.

Reply to Objection 4. Perseverance may be taken in two ways: in one sense as a particular virtue, signifying a habit whereby a man makes a choice of persevering in good; in that sense Adam possessed perseverance. In another sense it is taken as a circumstance of virtue; signifying a certain uninterrupted continuation of virtue; in which sense Adam did not possess perseverance.

Reply to Objection 5. appears from what has been said above.

Whether the actions of the first man were less meritorious than ours are?

Ia q. 95 a. 4

Objection 1. It would seem that the actions of the first man were less meritorious than ours are. For grace is given to us through the mercy of God, Who succors most those who are most in need. Now we are more in need of grace than was man in the state of innocence. Therefore grace is more copiously poured out upon us; and since grace is the source of merit, our actions are more meritorious.

Objection 2. Further, struggle and difficulty are required for merit; for it is written (2 Tim. 2:5): “He... is not crowned except he strive lawfully” and the Philoso-

pher says (Ethic. ii, 3): “The object of virtue is the difficult and the good.” But there is more strife and difficulty now. Therefore there is greater efficacy for merit.

Objection 3. Further, the Master says (Sent. ii., D, xxiv) that “man would not have merited in resisting temptation; whereas he does merit now, when he resists.” Therefore our actions are more meritorious than in the primitive state.

On the contrary, if such were the case, man would be better off after sinning.

I answer that, Merit as regards degree may be

gauged in two ways. First, in its root, which is grace and charity. Merit thus measured corresponds in degree to the essential reward, which consists in the enjoyment of God; for the greater the charity whence our actions proceed, the more perfectly shall we enjoy God. Secondly, the degree of merit is measured by the degree of the action itself. This degree is of two kinds, absolute and proportional. The widow who put two mites into the treasury performed a deed of absolutely less degree than the others who put great sums therein. But in proportionate degree the widow gave more, as Our Lord said; because she gave more in proportion to her means. In each of these cases the degree of merit corresponds to the accidental reward, which consists in rejoicing for created good.

We conclude therefore that in the state of innocence man's works were more meritorious than after sin was committed, if we consider the degree of merit on the part of grace, which would have been more copious as meeting with no obstacle in human nature: and in like manner, if we consider the absolute degree of the work done; because, as man would have had greater virtue, he would have performed greater works. But if we consider the proportionate degree, a greater reason for merit exists after sin, on account of man's weakness; because a small deed is more beyond the capacity of one who works with difficulty than a great deed is beyond one

who performs it easily.

Reply to Objection 1. After sin man requires grace for more things than before sin; but he does not need grace more; forasmuch as man even before sin required grace to obtain eternal life, which is the chief reason for the need of grace. But after sin man required grace also for the remission of sin, and for the support of his weakness.

Reply to Objection 2. Difficulty and struggle belong to the degree of merit according to the proportionate degree of the work done, as above explained. It is also a sign of the will's promptitude striving after what is difficult to itself: and the promptitude of the will is caused by the intensity of charity. Yet it may happen that a person performs an easy deed with as prompt a will as another performs an arduous deed; because he is ready to do even what may be difficult to him. But the actual difficulty, by its penal character, enables the deed to satisfy for sin.

Reply to Objection 3. The first man would not have gained merit in resisting temptation, according to the opinion of those who say that he did not possess grace; even as now there is no merit to those who have not grace. But in this point there is a difference, inasmuch as in the primitive state there was no interior impulse to evil, as in our present state. Hence man was more able then than now to resist temptation even without grace.

Objection 1. It would seem that the first man was not created in grace. For the Apostle, distinguishing between Adam and Christ, says (1 Cor. 15:45): “The first Adam was made into a living soul; the last Adam into a quickening spirit.” But the spirit is quickened by grace. Therefore Christ alone was made in grace.

Objection 2. Further, Augustine says (QQ. Vet. et Nov. Test., qu. 123)* that “Adam did not possess the Holy Ghost.” But whoever possesses grace has the Holy Ghost. Therefore Adam was not created in grace.

Objection 3. Further, Augustine says (De Correp. et Grat. x) that “God so ordered the life of the angels and men, as to show first what they could do by free-will, then what they could do by His grace, and by the discernment of righteousness.” God thus first created men and angels in the state of natural free-will only; and afterwards bestowed grace on them.

Objection 4. Further, the Master says (Sent. ii, D, xxiv): “When man was created he was given sufficient help to stand, but not sufficient to advance.” But whoever has grace can advance by merit. Therefore the first man was not created in grace.

Objection 5. Further, the reception of grace requires the consent of the recipient, since thereby a kind of spiritual marriage takes place between God and the soul. But consent presupposes existence. Therefore man did not receive grace in the first moment of his creation.

Objection 6. Further, nature is more distant from grace than grace is from glory, which is but grace consummated. But in man grace precedes glory. Therefore much more did nature precede grace.

On the contrary, Man and angel are both ordained to grace. But the angels were created in grace, for Augustine says (De Civ. Dei xii, 9): “God at the same time fashioned their nature and endowed them with grace.” Therefore man also was created in grace.

I answer that, Some say that man was not created in grace; but that it was bestowed on him subsequently before sin: and many authorities of the Saints declare that man possessed grace in the state of innocence.

But the very rectitude of the primitive state, where-with man was endowed by God, seems to require that, as others say, he was created in grace, according to Eccles. 7:30, “God made man right.” For this rectitude consisted in his reason being subject to God, the lower powers to reason, and the body to the soul: and the first subjection was the cause of both the second and the third; since while reason was subject to God, the lower powers remained subject to reason, as Augustine says†. Now it is clear that such a subjection of the body

to the soul and of the lower powers to reason, was not from nature; otherwise it would have remained after sin; since even in the demons the natural gifts remained after sin, as Dionysius declared (Div. Nom. iv). Hence it is clear that also the primitive subjection by virtue of which reason was subject to God, was not a merely natural gift, but a supernatural endowment of grace; for it is not possible that the effect should be of greater efficiency than the cause. Hence Augustine says (De Civ. Dei xiii, 13) that, “as soon as they disobeyed the Divine command, and forfeited Divine grace, they were ashamed of their nakedness, for they felt the impulse of disobedience in the flesh, as though it were a punishment corresponding to their own disobedience.” Hence if the loss of grace dissolved the obedience of the flesh to the soul, we may gather that the inferior powers were subjected to the soul through grace existing therein.

Reply to Objection 1. The Apostle in these words means to show that there is a spiritual body, if there is an animal body, inasmuch as the spiritual life of the body began in Christ, who is “the firstborn of the dead,” as the body’s animal life began in Adam. From the Apostle’s words, therefore, we cannot gather that Adam had no spiritual life in his soul; but that he had not spiritual life as regards the body.

Reply to Objection 2. As Augustine says in the same passage, it is not disputed that Adam, like other just souls, was in some degree gifted with the Holy Ghost; but “he did not possess the Holy Ghost, as the faithful possess Him now,” who are admitted to eternal happiness directly after death.

Reply to Objection 3. This passage from Augustine does not assert that angels or men were created with natural free-will before they possessed grace; but that God shows first what their free-will could do before being confirmed in grace, and what they acquired afterwards by being so confirmed.

Reply to Objection 4. The Master here speaks according to the opinion of those who held that man was not created in grace, but only in a state of nature. We may also say that, though man was created in grace, yet it was not by virtue of the nature wherein he was created that he could advance by merit, but by virtue of the grace which was added.

Reply to Objection 5. As the motion of the will is not continuous there is nothing against the first man having consented to grace even in the first moment of his existence.

Reply to Objection 6. We merit glory by an act of grace; but we do not merit grace by an act of nature; hence the comparison fails.

* Work of an anonymous author, among the supposititious works of St. Augustine † Cf. De Civ. Dei xiii, 13; De Pecc. Merit. et Remiss. i, 16

Objection 1. It would seem that the first man's soul had no passions. For by the passions of the soul "the flesh lusteth against the spirit" (Gal. 5:7). But this did not happen in the state of innocence. Therefore in the state of innocence there were no passions of the soul.

Objection 2. Further, Adam's soul was nobler than his body. But his body was impassible. Therefore no passions were in his soul.

Objection 3. Further, the passions of the soul are restrained by the moral virtues. But in Adam the moral virtues were perfect. Therefore the passions were entirely excluded from him.

On the contrary, Augustine says (De Civ. Dei xiv, 10) that "in our first parents there was undisturbed love of God," and other passions of the soul.

I answer that, The passions of the soul are in the sensual appetite, the object of which is good and evil. Wherefore some passions of the soul are directed to what is good, as love and joy; others to what is evil, as fear and sorrow. And since in the primitive state, evil was neither present nor imminent, nor was any good wanting which a good-will could desire to have then, as Augustine says (De Civ. Dei xiv, 10), therefore Adam had no passion with evil as its object; such as fear, sorrow, and the like; neither had he passions in respect of good not possessed, but to be possessed then, as burning concupiscence. But those passions which regard present

good, as joy and love; or which regard future good to be had at the proper time, as desire and hope that casteth not down, existed in the state of innocence; otherwise, however, than as they exist in ourselves. For our sensual appetite, wherein the passions reside, is not entirely subject to reason; hence at times our passions forestall and hinder reason's judgment; at other times they follow reason's judgment, accordingly as the sensual appetite obeys reason to some extent. But in the state of innocence the inferior appetite was wholly subject to reason: so that in that state the passions of the soul existed only as consequent upon the judgment of reason.

Reply to Objection 1. The flesh lusts against the spirit by the rebellion of the passions against reason; which could not occur in the state of innocence.

Reply to Objection 2. The human body was impassible in the state of innocence as regards the passions which alter the disposition of nature, as will be explained later on (q. 97, a. 2); likewise the soul was impassible as regards the passions which impede the free use of reason.

Reply to Objection 3. Perfection of moral virtue does not wholly take away the passions, but regulates them; for the temperate man desires as he ought to desire, and what he ought to desire, as stated in Ethic. iii, 11.

Objection 1. It would seem that Adam had not all the virtues. For some virtues are directed to curb passions: thus immoderate concupiscence is restrained by temperance, and immoderate fear by fortitude. But in the state of innocence no immoderation existed in the passions. Therefore neither did these virtues then exist.

Objection 2. Further, some virtues are concerned with the passions which have evil as their object; as meekness with anger; fortitude with fear. But these passions did not exist in the state of innocence, as stated above (a. 2). Therefore neither did those virtues exist then.

Objection 3. Further, penance is a virtue that regards sin committed. Mercy, too, is a virtue concerned with unhappiness. But in the state of innocence neither sin nor unhappiness existed. Therefore neither did those virtues exist.

Objection 4. Further, perseverance is a virtue. But Adam possessed it not; as proved by his subsequent sin. Therefore he possessed not every virtue.

Objection 5. Further, faith is a virtue. But it did not exist in the state of innocence; for it implies an obscurity of knowledge which seems to be incompatible with the perfection of the primitive state.

On the contrary, Augustine says, in a homily (Serm. contra Judaeos): “The prince of sin overcame Adam who was made from the slime of the earth to the image of God, adorned with modesty, restrained by temperance, refulgent with brightness.”

I answer that, in the state of innocence man in a certain sense possessed all the virtues; and this can be proved from what precedes. For it was shown above (a. 1) that such was the rectitude of the primitive state, that reason was subject to God, and the lower powers to reason. Now the virtues are nothing but those perfections whereby reason is directed to God, and the inferior powers regulated according to the dictate of reason, as will be explained in the Treatise on the Virtues (Ia IIae, q. 63, a. 2). Wherefore the rectitude of the primitive state required that man should in a sense possess every virtue.

It must, however, be noted that some virtues of their very nature do not involve imperfection, such as charity and justice; and these virtues did exist in the primitive state absolutely, both in habit and in act. But other virtues are of such a nature as to imply imperfection either in their act, or on the part of the matter. If such imperfection be consistent with the perfection of the primitive state, such virtues necessarily existed in that state; as faith, which is of things not seen, and hope which is of things not yet possessed. For the perfection of that state did not extend to the vision of the Divine Essence, and the possession of God with the enjoyment of final beatitude. Hence faith and hope could exist in the primitive state, both as to habit and as to act. But any virtue

which implies imperfection incompatible with the perfection of the primitive state, could exist in that state as a habit, but not as to the act; for instance, penance, which is sorrow for sin committed; and mercy, which is sorrow for others’ unhappiness; because sorrow, guilt, and unhappiness are incompatible with the perfection of the primitive state. Wherefore such virtues existed as habits in the first man, but not as to their acts; for he was so disposed that he would repent, if there had been a sin to repent for; and had he seen unhappiness in his neighbor, he would have done his best to remedy it. This is in accordance with what the Philosopher says, “Shame, which regards what is ill done, may be found in a virtuous man, but only conditionally; as being so disposed that he would be ashamed if he did wrong” (Ethic. iv, 9).

Reply to Objection 1. It is accidental to temperance and fortitude to subdue superabundant passion, in so far as they are in a subject which happens to have superabundant passions, and yet those virtues are ‘per se’ competent to moderate the passions.

Reply to Objection 2. Passions which have evil for their object were incompatible with the perfection of the primitive state, if that evil be in the one affected by the passion; such as fear and sorrow. But passions which relate to evil in another are not incompatible with the perfection of the primitive state; for in that state man could hate the demons’ malice, as he could love God’s goodness. Thus the virtues which relate to such passions could exist in the primitive state, in habit and in act. Virtues, however, relating to passions which regard evil in the same subject, if relating to such passions only, could not exist in the primitive state in act, but only in habit, as we have said above of penance and of mercy. But other virtues there are which have relation not to such passions only, but to others; such as temperance, which relates not only to sorrow, but also to joy; and fortitude, which relates not only to fear, but also to daring and hope. Thus the act of temperance could exist in the primitive state, so far as it moderates pleasure; and in like manner, fortitude, as moderating daring and hope, but not as moderating sorrow and fear.

Reply to Objection 3. appears from what has been said above.

Reply to Objection 4. Perseverance may be taken in two ways: in one sense as a particular virtue, signifying a habit whereby a man makes a choice of persevering in good; in that sense Adam possessed perseverance. In another sense it is taken as a circumstance of virtue; signifying a certain uninterrupted continuation of virtue; in which sense Adam did not possess perseverance.

Reply to Objection 5. appears from what has been said above.

Objection 1. It would seem that the actions of the first man were less meritorious than ours are. For grace is given to us through the mercy of God, Who succors most those who are most in need. Now we are more in need of grace than was man in the state of innocence. Therefore grace is more copiously poured out upon us; and since grace is the source of merit, our actions are more meritorious.

Objection 2. Further, struggle and difficulty are required for merit; for it is written (2 Tim. 2:5): "He... is not crowned except he strive lawfully" and the Philosopher says (Ethic. ii, 3): "The object of virtue is the difficult and the good." But there is more strife and difficulty now. Therefore there is greater efficacy for merit.

Objection 3. Further, the Master says (Sent. ii., D, xxiv) that "man would not have merited in resisting temptation; whereas he does merit now, when he resists." Therefore our actions are more meritorious than in the primitive state.

On the contrary, if such were the case, man would be better off after sinning.

I answer that, Merit as regards degree may be gauged in two ways. First, in its root, which is grace and charity. Merit thus measured corresponds in degree to the essential reward, which consists in the enjoyment of God; for the greater the charity whence our actions proceed, the more perfectly shall we enjoy God. Secondly, the degree of merit is measured by the degree of the action itself. This degree is of two kinds, absolute and proportional. The widow who put two mites into the treasury performed a deed of absolutely less degree than the others who put great sums therein. But in proportionate degree the widow gave more, as Our Lord said; because she gave more in proportion to her means. In each of these cases the degree of merit corresponds to the accidental reward, which consists in rejoicing for created good.

We conclude therefore that in the state of innocence

man's works were more meritorious than after sin was committed, if we consider the degree of merit on the part of grace, which would have been more copious as meeting with no obstacle in human nature: and in like manner, if we consider the absolute degree of the work done; because, as man would have had greater virtue, he would have performed greater works. But if we consider the proportionate degree, a greater reason for merit exists after sin, on account of man's weakness; because a small deed is more beyond the capacity of one who works with difficulty than a great deed is beyond one who performs it easily.

Reply to Objection 1. After sin man requires grace for more things than before sin; but he does not need grace more; forasmuch as man even before sin required grace to obtain eternal life, which is the chief reason for the need of grace. But after sin man required grace also for the remission of sin, and for the support of his weakness.

Reply to Objection 2. Difficulty and struggle belong to the degree of merit according to the proportionate degree of the work done, as above explained. It is also a sign of the will's promptitude striving after what is difficult to itself: and the promptitude of the will is caused by the intensity of charity. Yet it may happen that a person performs an easy deed with as prompt a will as another performs an arduous deed; because he is ready to do even what may be difficult to him. But the actual difficulty, by its penal character, enables the deed to satisfy for sin.

Reply to Objection 3. The first man would not have gained merit in resisting temptation, according to the opinion of those who say that he did not possess grace; even as now there is no merit to those who have not grace. But in this point there is a difference, inasmuch as in the primitive state there was no interior impulse to evil, as in our present state. Hence man was more able then than now to resist temptation even without grace.

FIRST PART, QUESTION 96

Of the Mastership Belonging to Man in the State of Innocence (In Four Articles)

We next consider the mastership which belonged to man in the state of innocence. Under this head there are four points of inquiry:

- (1) Whether man in the state of innocence was master over the animals?
- (2) Whether he was master over all creatures?
- (3) Whether in the state of innocence all men were equal?
- (4) Whether in that state man would have been master over men?

Whether Adam in the state of innocence had mastership over the animals?

Ia q. 96 a. 1

Objection 1. It would seem that in the state of innocence Adam had no mastership over the animals. For Augustine says (Gen. ad lit. ix, 14), that the animals were brought to Adam, under the direction of the angels, to receive their names from him. But the angels need not have intervened thus, if man himself were master over the animals. Therefore in the state of innocence man had no mastership of the animals.

Objection 2. Further, it is unfitting that elements hostile to one another should be brought under the mastership of one. But many animals are hostile to one another, as the sheep and the wolf. Therefore all animals were not brought under the mastership of man.

Objection 3. Further, Jerome says*: “God gave man mastership over the animals, although before sin he had no need of them: for God foresaw that after sin animals would become useful to man.” Therefore, at least before sin, it was unfitting for man to make use of his mastership.

Objection 4. Further, it is proper to a master to command. But a command is not given rightly save to a rational being. Therefore man had no mastership over the irrational animals.

On the contrary, It is written (Gn. 1:26): “Let him have dominion over the fishes of the sea, and the birds of the air, and the beasts of the earth” [Vulg. “and the whole earth”].

I answer that, As above stated (q. 95, a. 1) for his disobedience to God, man was punished by the disobedience of those creatures which should be subject to him. Therefore in the state of innocence, before man had disobeyed, nothing disobeyed him that was naturally subject to him. Now all animals are naturally subject to man. This can be proved in three ways. First, from the order observed by nature; for just as in the generation of things we perceive a certain order of procession of the perfect from the imperfect (thus matter is for the sake of form; and the imperfect form, for the sake of the perfect), so also is there order in the use of natural things; thus the imperfect are for the use of the perfect; as the plants make use of the earth for their

nourishment, and animals make use of plants, and man makes use of both plants and animals. Therefore it is in keeping with the order of nature, that man should be master over animals. Hence the Philosopher says (Polit. i, 5) that the hunting of wild animals is just and natural, because man thereby exercises a natural right. Secondly, this is proved by the order of Divine Providence which always governs inferior things by the superior. Wherefore, as man, being made to the image of God, is above other animals, these are rightly subject to his government. Thirdly, this is proved from a property of man and of other animals. For we see in the latter a certain participated prudence of natural instinct, in regard to certain particular acts; whereas man possesses a universal prudence as regards all practical matters. Now whatever is participated is subject to what is essential and universal. Therefore the subjection of other animals to man is proved to be natural.

Reply to Objection 1. A higher power can do many things that an inferior power cannot do to those which are subject to them. Now an angel is naturally higher than man. Therefore certain things in regard to animals could be done by angels, which could not be done by man; for instance, the rapid gathering together of all the animals.

Reply to Objection 2. In the opinion of some, those animals which now are fierce and kill others, would, in that state, have been tame, not only in regard to man, but also in regard to other animals. But this is quite unreasonable. For the nature of animals was not changed by man’s sin, as if those whose nature now it is to devour the flesh of others, would then have lived on herbs, as the lion and falcon. Nor does Bede’s gloss on Gn. 1:30, say that trees and herbs were given as food to all animals and birds, but to some. Thus there would have been a natural antipathy between some animals. They would not, however, on this account have been excepted from the mastership of man: as neither at present are they for that reason excepted from the mastership of God, Whose Providence has ordained all this. Of this Providence man would have been the executor, as appears

* The words quoted are not in St. Jerome’s works. St. Thomas may have had in mind Bede, Hexaem., as quoted in the Glossa ordinaria on Gn. 1:26

even now in regard to domestic animals, since fowls are given by men as food to the trained falcon.

Reply to Objection 3. In the state of innocence man would not have had any bodily need of animals—neither for clothing, since then they were naked and not ashamed, there being no inordinate motions of concupiscence—nor for food, since they fed on the trees of paradise—nor to carry him about, his body being strong enough for that purpose. But man needed animals in order to have experimental knowledge of their

natures. This is signified by the fact that God led the animals to man, that he might give them names expressive of their respective natures.

Reply to Objection 4. All animals by their natural instinct have a certain participation of prudence and reason: which accounts for the fact that cranes follow their leader, and bees obey their queen. So all animals would have obeyed man of their own accord, as in the present state some domestic animals obey him.

Whether man had mastership over all other creatures?

Ia q. 96 a. 2

Objection 1. It would seem that in the state of innocence man would not have had mastership over all other creatures. For an angel naturally has a greater power than man. But, as Augustine says (De Trin. iii, 8), “corporeal matter would not have obeyed even the holy angels.” Much less therefore would it have obeyed man in the state of innocence.

Objection 2. Further, the only powers of the soul existing in plants are nutritive, augmentative, and generative. Now these do not naturally obey reason; as we can see in the case of any one man. Therefore, since it is by his reason that man is competent to have mastership, it seems that in the state of innocence man had no dominion over plants.

Objection 3. Further, whosoever is master of a thing, can change it. But man could not have changed the course of the heavenly bodies; for this belongs to God alone, as Dionysius says (Ep. ad Polycarp. vii). Therefore man had no dominion over them.

On the contrary, It is written (Gn. 1:26): “That he may have dominion over... every creature.”

I answer that, Man in a certain sense contains all things; and so according as he is master of what is

within himself, in the same way he can have mastership over other things. Now we may consider four things in man: his “reason,” which makes him like to the angels’; his “sensitive powers,” whereby he is like the animals; his “natural forces,” which liken him to the plants; and “the body itself,” wherein he is like to inanimate things. Now in man reason has the position of a master and not of a subject. Wherefore man had no mastership over the angels in the primitive state; so when we read “all creatures,” we must understand the creatures which are not made to God’s image. Over the sensitive powers, as the irascible and concupiscible, which obey reason in some degree, the soul has mastership by commanding. So in the state of innocence man had mastership over the animals by commanding them. But of the natural powers and the body itself man is master not by commanding, but by using them. Thus also in the state of innocence man’s mastership over plants and inanimate things consisted not in commanding or in changing them, but in making use of them without hindrance.

The answers to the objections appear from the above.

Whether men were equal in the state of innocence?

Ia q. 96 a. 3

Objection 1. It would seem that in the state of innocence all would have been equal. For Gregory says (Moral. xxi): “Where there is no sin, there is no inequality.” But in the state of innocence there was no sin. Therefore all were equal.

Objection 2. Further, likeness and equality are the basis of mutual love, according to Ecclus. 13:19, “Every beast loveth its like; so also every man him that is nearest to himself.” Now in that state there was among men an abundance of love, which is the bond of peace. Therefore all were equal in the state of innocence.

Objection 3. Further, the cause ceasing, the effect also ceases. But the cause of present inequality among men seems to arise, on the part of God, from the fact that He rewards some and punishes others; and on the part of nature, from the fact that some, through a defect of nature, are born weak and deficient, others strong and perfect, which would not have been the case in the prim-

itive state. Therefore, etc.

On the contrary, It is written (Rom. 13:1): “The things which are of God, are well ordered” [Vulg. “Those that are, are ordained of God”]. But order chiefly consists in inequality; for Augustine says (De Civ. Dei xix, 13): “Order disposes things equal and unequal in their proper place.” Therefore in the primitive state, which was most proper and orderly, inequality would have existed.

I answer that, We must needs admit that in the primitive state there would have been some inequality, at least as regards sex, because generation depends upon diversity of sex: and likewise as regards age; for some would have been born of others; nor would sexual union have been sterile.

Moreover, as regards the soul, there would have been inequality as to righteousness and knowledge. For man worked not of necessity, but of his own free-will,

by virtue of which man can apply himself, more or less, to action, desire, or knowledge; hence some would have made a greater advance in virtue and knowledge than others.

There might also have been bodily disparity. For the human body was not entirely exempt from the laws of nature, so as not to receive from exterior sources more or less advantage and help: since indeed it was dependent on food wherewith to sustain life.

So we may say that, according to the climate, or the movement of the stars, some would have been born more robust in body than others, and also greater, and more beautiful, and all ways better disposed; so that, however, in those who were thus surpassed, there would have been no defect or fault either in soul or body.

Reply to Objection 1. By those words Gregory means to exclude such inequality as exists between

virtue and vice; the result of which is that some are placed in subjection to others as a penalty.

Reply to Objection 2. Equality is the cause of equality in mutual love. Yet between those who are unequal there can be a greater love than between equals; although there be not an equal response: for a father naturally loves his son more than a brother loves his brother; although the son does not love his father as much as he is loved by him.

Reply to Objection 3. The cause of inequality could be on the part of God; not indeed that He would punish some and reward others, but that He would exalt some above others; so that the beauty of order would the more shine forth among men. Inequality might also arise on the part of nature as above described, without any defect of nature.

Whether in the state of innocence man would have been master over man?

Ia q. 96 a. 4

Objection 1. It would seem that in the state of innocence man would not have been master over man. For Augustine says (De Civ. Dei xix, 15): “God willed that man, who was endowed with reason and made to His image, should rule over none but irrational creatures; not over men, but over cattle.”

Objection 2. Further, what came into the world as a penalty for sin would not have existed in the state of innocence. But man was made subject to man as a penalty; for after sin it was said to the woman (Gn. 3:16): “Thou shalt be under thy husband’s power.” Therefore in the state of innocence man would not have been subject to man.

Objection 3. Further, subjection is opposed to liberty. But liberty is one of the chief blessings, and would not have been lacking in the state of innocence, “where nothing was wanting that man’s good-will could desire,” as Augustine says (De Civ. Dei xiv, 10). Therefore man would not have been master over man in the state of innocence.

On the contrary, The condition of man in the state of innocence was not more exalted than the condition of the angels. But among the angels some rule over others; and so one order is called that of “Dominations.” Therefore it was not beneath the dignity of the state of innocence that one man should be subject to another.

I answer that, Mastership has a twofold meaning. First, as opposed to slavery, in which sense a master means one to whom another is subject as a slave. In another sense mastership is referred in a general sense to any kind of subject; and in this sense even he who has the office of governing and directing free men, can be called a master. In the state of innocence man could have been a master of men, not in the former but in the latter sense. This distinction is founded on the reason that a slave differs from a free man in that the latter

has the disposal of himself, as is stated in the beginning of the Metaphysics, whereas a slave is ordered to another. So that one man is master of another as his slave when he refers the one whose master he is, to his own—namely the master’s use. And since every man’s proper good is desirable to himself, and consequently it is a grievous matter to anyone to yield to another what ought to be one’s own, therefore such dominion implies of necessity a pain inflicted on the subject; and consequently in the state of innocence such a mastership could not have existed between man and man.

But a man is the master of a free subject, by directing him either towards his proper welfare, or to the common good. Such a kind of mastership would have existed in the state of innocence between man and man, for two reasons. First, because man is naturally a social being, and so in the state of innocence he would have led a social life. Now a social life cannot exist among a number of people unless under the presidency of one to look after the common good; for many, as such, seek many things, whereas one attends only to one. Wherefore the Philosopher says, in the beginning of the Politics, that wherever many things are directed to one, we shall always find one at the head directing them. Secondly, if one man surpassed another in knowledge and virtue, this would not have been fitting unless these gifts conduced to the benefit of others, according to 1 Pet. 4:10, “As every man hath received grace, ministering the same one to another.” Wherefore Augustine says (De Civ. Dei xix, 14): “Just men command not by the love of domineering, but by the service of counsel”: and (De Civ. Dei xix, 15): “The natural order of things requires this; and thus did God make man.”

From this appear the replies to the objections which are founded on the first-mentioned mode of mastership.

Objection 1. It would seem that in the state of innocence Adam had no mastership over the animals. For Augustine says (*Gen. ad lit.* ix, 14), that the animals were brought to Adam, under the direction of the angels, to receive their names from him. But the angels need not have intervened thus, if man himself were master over the animals. Therefore in the state of innocence man had no mastership of the animals.

Objection 2. Further, it is unfitting that elements hostile to one another should be brought under the mastership of one. But many animals are hostile to one another, as the sheep and the wolf. Therefore all animals were not brought under the mastership of man.

Objection 3. Further, Jerome says*: “God gave man mastership over the animals, although before sin he had no need of them: for God foresaw that after sin animals would become useful to man.” Therefore, at least before sin, it was unfitting for man to make use of his mastership.

Objection 4. Further, it is proper to a master to command. But a command is not given rightly save to a rational being. Therefore man had no mastership over the irrational animals.

On the contrary, It is written (*Gn.* 1:26): “Let him have dominion over the fishes of the sea, and the birds of the air, and the beasts of the earth” [*Vulg.* “and the whole earth”].

I answer that, As above stated (q. 95, a. 1) for his disobedience to God, man was punished by the disobedience of those creatures which should be subject to him. Therefore in the state of innocence, before man had disobeyed, nothing disobeyed him that was naturally subject to him. Now all animals are naturally subject to man. This can be proved in three ways. First, from the order observed by nature; for just as in the generation of things we perceive a certain order of procession of the perfect from the imperfect (thus matter is for the sake of form; and the imperfect form, for the sake of the perfect), so also is there order in the use of natural things; thus the imperfect are for the use of the perfect; as the plants make use of the earth for their nourishment, and animals make use of plants, and man makes use of both plants and animals. Therefore it is in keeping with the order of nature, that man should be master over animals. Hence the Philosopher says (*Polit.* i, 5) that the hunting of wild animals is just and natural, because man thereby exercises a natural right. Secondly, this is proved by the order of Divine Providence which always governs inferior things by the superior. Wherefore, as man, being made to the image of God, is above other animals, these are rightly subject to his

government. Thirdly, this is proved from a property of man and of other animals. For we see in the latter a certain participated prudence of natural instinct, in regard to certain particular acts; whereas man possesses a universal prudence as regards all practical matters. Now whatever is participated is subject to what is essential and universal. Therefore the subjection of other animals to man is proved to be natural.

Reply to Objection 1. A higher power can do many things that an inferior power cannot do to those which are subject to them. Now an angel is naturally higher than man. Therefore certain things in regard to animals could be done by angels, which could not be done by man; for instance, the rapid gathering together of all the animals.

Reply to Objection 2. In the opinion of some, those animals which now are fierce and kill others, would, in that state, have been tame, not only in regard to man, but also in regard to other animals. But this is quite unreasonable. For the nature of animals was not changed by man’s sin, as if those whose nature now it is to devour the flesh of others, would then have lived on herbs, as the lion and falcon. Nor does Bede’s gloss on *Gn.* 1:30, say that trees and herbs were given as food to all animals and birds, but to some. Thus there would have been a natural antipathy between some animals. They would not, however, on this account have been excepted from the mastership of man: as neither at present are they for that reason excepted from the mastership of God, Whose Providence has ordained all this. Of this Providence man would have been the executor, as appears even now in regard to domestic animals, since fowls are given by men as food to the trained falcon.

Reply to Objection 3. In the state of innocence man would not have had any bodily need of animals—neither for clothing, since then they were naked and not ashamed, there being no inordinate motions of concupiscence—nor for food, since they fed on the trees of paradise—nor to carry him about, his body being strong enough for that purpose. But man needed animals in order to have experimental knowledge of their natures. This is signified by the fact that God led the animals to man, that he might give them names expressive of their respective natures.

Reply to Objection 4. All animals by their natural instinct have a certain participation of prudence and reason: which accounts for the fact that cranes follow their leader, and bees obey their queen. So all animals would have obeyed man of their own accord, as in the present state some domestic animals obey him.

* The words quoted are not in St. Jerome’s works. St. Thomas may have had in mind Bede, *Hexaem.*, as quoted in the *Glossa ordinaria* on *Gn.* 1:26

Objection 1. It would seem that in the state of innocence man would not have had mastership over all other creatures. For an angel naturally has a greater power than man. But, as Augustine says (*De Trin.* iii, 8), “corporeal matter would not have obeyed even the holy angels.” Much less therefore would it have obeyed man in the state of innocence.

Objection 2. Further, the only powers of the soul existing in plants are nutritive, augmentative, and generative. Now these do not naturally obey reason; as we can see in the case of any one man. Therefore, since it is by his reason that man is competent to have mastership, it seems that in the state of innocence man had no dominion over plants.

Objection 3. Further, whosoever is master of a thing, can change it. But man could not have changed the course of the heavenly bodies; for this belongs to God alone, as Dionysius says (*Ep. ad Polycarp.* vii). Therefore man had no dominion over them.

On the contrary, It is written (*Gn.* 1:26): “That he may have dominion over . . . every creature.”

I answer that, Man in a certain sense contains all things; and so according as he is master of what is

within himself, in the same way he can have mastership over other things. Now we may consider four things in man: his “reason,” which makes him like to the angels; his “sensitive powers,” whereby he is like the animals; his “natural forces,” which liken him to the plants; and “the body itself,” wherein he is like to inanimate things. Now in man reason has the position of a master and not of a subject. Wherefore man had no mastership over the angels in the primitive state; so when we read “all creatures,” we must understand the creatures which are not made to God’s image. Over the sensitive powers, as the irascible and concupiscible, which obey reason in some degree, the soul has mastership by commanding. So in the state of innocence man had mastership over the animals by commanding them. But of the natural powers and the body itself man is master not by commanding, but by using them. Thus also in the state of innocence man’s mastership over plants and inanimate things consisted not in commanding or in changing them, but in making use of them without hindrance.

The answers to the objections appear from the above.

Objection 1. It would seem that in the state of innocence all would have been equal. For Gregory says (*Moral.* xxi): “Where there is no sin, there is no inequality.” But in the state of innocence there was no sin. Therefore all were equal.

Objection 2. Further, likeness and equality are the basis of mutual love, according to *Ecclus.* 13:19, “Every beast loveth its like; so also every man him that is nearest to himself.” Now in that state there was among men an abundance of love, which is the bond of peace. Therefore all were equal in the state of innocence.

Objection 3. Further, the cause ceasing, the effect also ceases. But the cause of present inequality among men seems to arise, on the part of God, from the fact that He rewards some and punishes others; and on the part of nature, from the fact that some, through a defect of nature, are born weak and deficient, others strong and perfect, which would not have been the case in the primitive state. Therefore, etc.

On the contrary, It is written (*Rom.* 13:1): “The things which are of God, are well ordered” [*Vulg.* “Those that are, are ordained of God”]. But order chiefly consists in inequality; for Augustine says (*De Civ. Dei* xix, 13): “Order disposes things equal and unequal in their proper place.” Therefore in the primitive state, which was most proper and orderly, inequality would have existed.

I answer that, We must needs admit that in the primitive state there would have been some inequality, at least as regards sex, because generation depends upon diversity of sex: and likewise as regards age; for some would have been born of others; nor would sexual union have been sterile.

Moreover, as regards the soul, there would have been inequality as to righteousness and knowledge. For

man worked not of necessity, but of his own free-will, by virtue of which man can apply himself, more or less, to action, desire, or knowledge; hence some would have made a greater advance in virtue and knowledge than others.

There might also have been bodily disparity. For the human body was not entirely exempt from the laws of nature, so as not to receive from exterior sources more or less advantage and help: since indeed it was dependent on food wherewith to sustain life.

So we may say that, according to the climate, or the movement of the stars, some would have been born more robust in body than others, and also greater, and more beautiful, and all ways better disposed; so that, however, in those who were thus surpassed, there would have been no defect or fault either in soul or body.

Reply to Objection 1. By those words Gregory means to exclude such inequality as exists between virtue and vice; the result of which is that some are placed in subjection to others as a penalty.

Reply to Objection 2. Equality is the cause of equality in mutual love. Yet between those who are unequal there can be a greater love than between equals; although there be not an equal response: for a father naturally loves his son more than a brother loves his brother; although the son does not love his father as much as he is loved by him.

Reply to Objection 3. The cause of inequality could be on the part of God; not indeed that He would punish some and reward others, but that He would exalt some above others; so that the beauty of order would the more shine forth among men. Inequality might also arise on the part of nature as above described, without any defect of nature.

Objection 1. It would seem that in the state of innocence man would not have been master over man. For Augustine says (De Civ. Dei xix, 15): “God willed that man, who was endowed with reason and made to His image, should rule over none but irrational creatures; not over men, but over cattle.”

Objection 2. Further, what came into the world as a penalty for sin would not have existed in the state of innocence. But man was made subject to man as a penalty; for after sin it was said to the woman (Gn. 3:16): “Thou shalt be under thy husband’s power.” Therefore in the state of innocence man would not have been subject to man.

Objection 3. Further, subjection is opposed to liberty. But liberty is one of the chief blessings, and would not have been lacking in the state of innocence, “where nothing was wanting that man’s good-will could desire,” as Augustine says (De Civ. Dei xiv, 10). Therefore man would not have been master over man in the state of innocence.

On the contrary, The condition of man in the state of innocence was not more exalted than the condition of the angels. But among the angels some rule over others; and so one order is called that of “Dominations.” Therefore it was not beneath the dignity of the state of innocence that one man should be subject to another.

I answer that, Mastership has a twofold meaning. First, as opposed to slavery, in which sense a master means one to whom another is subject as a slave. In another sense mastership is referred in a general sense to any kind of subject; and in this sense even he who has the office of governing and directing free men, can be called a master. In the state of innocence man could have been a master of men, not in the former but in the latter sense. This distinction is founded on the reason that a slave differs from a free man in that the latter

has the disposal of himself, as is stated in the beginning of the Metaphysics, whereas a slave is ordered to another. So that one man is master of another as his slave when he refers the one whose master he is, to his own—namely the master’s use. And since every man’s proper good is desirable to himself, and consequently it is a grievous matter to anyone to yield to another what ought to be one’s own, therefore such dominion implies of necessity a pain inflicted on the subject; and consequently in the state of innocence such a mastership could not have existed between man and man.

But a man is the master of a free subject, by directing him either towards his proper welfare, or to the common good. Such a kind of mastership would have existed in the state of innocence between man and man, for two reasons. First, because man is naturally a social being, and so in the state of innocence he would have led a social life. Now a social life cannot exist among a number of people unless under the presidency of one to look after the common good; for many, as such, seek many things, whereas one attends only to one. Wherefore the Philosopher says, in the beginning of the Politics, that wherever many things are directed to one, we shall always find one at the head directing them. Secondly, if one man surpassed another in knowledge and virtue, this would not have been fitting unless these gifts conduced to the benefit of others, according to 1 Pet. 4:10, “As every man hath received grace, ministering the same one to another.” Wherefore Augustine says (De Civ. Dei xix, 14): “Just men command not by the love of domineering, but by the service of counsel”: and (De Civ. Dei xix, 15): “The natural order of things requires this; and thus did God make man.”

From this appear the replies to the objections which are founded on the first-mentioned mode of mastership.

FIRST PART, QUESTION 97

Of the Preservation of the Individual in the Primitive State (In Four Articles)

We next consider what belongs to the bodily state of the first man: first, as regards the preservation of the individual; secondly, as regards the preservation of the species.

Under the first head there are four points of inquiry:

- (1) Whether man in the state of innocence was immortal?
- (2) Whether he was impassible?
- (3) Whether he stood in need of food?
- (4) Whether he would have obtained immortality by the tree of life?

Whether in the state of innocence man would have been immortal?

Ia q. 97 a. 1

Objection 1. It would seem that in the state of innocence man was not immortal. For the term “mortal” belongs to the definition of man. But if you take away the definition, you take away the thing defined. Therefore as long as man was man he could not be immortal.

Objection 2. Further, corruptible and incorruptible are generically distinct, as the Philosopher says (*Metaph. x, Did. ix, 10*). But there can be no passing from one genus to another. Therefore if the first man was incorruptible, man could not be corruptible in the present state.

Objection 3. Further, if man were immortal in the state of innocence, this would have been due either to nature or to grace. Not to nature, for since nature does not change within the same species, he would also have been immortal now. Likewise neither would this be owing to grace; for the first man recovered grace by repentance, according to *Wis. 10:2*: “He brought him out of his sins.” Hence he would have regained his immortality; which is clearly not the case. Therefore man was not immortal in the state of innocence.

Objection 4. Further, immortality is promised to man as a reward, according to *Apoc. 21:4*: “Death shall be no more.” But man was not created in the state of reward, but that he might deserve the reward. Therefore man was not immortal in the state of innocence.

On the contrary, It is written (*Rom. 5:12*): “By sin death came into the world.” Therefore man was immortal before sin.

I answer that, A thing may be incorruptible in three ways. First, on the part of matter—that is to say, either because it possesses no matter, like an angel; or because it possesses matter that is in potentiality to one form only, like the heavenly bodies. Such things as these are incorruptible by their very nature. Secondly, a thing is incorruptible in its form, inasmuch as being by nature

corruptible, yet it has an inherent disposition which preserves it wholly from corruption; and this is called incorruptibility of glory; because as Augustine says (*Ep. ad Dioscor.*): “God made man’s soul of such a powerful nature, that from its fulness of beatitude, there redounds to the body a fulness of health, with the vigor of incorruption.” Thirdly, a thing may be incorruptible on the part of its efficient cause; in this sense man was incorruptible and immortal in the state of innocence. For, as Augustine says (*QQ. Vet. et Nov. Test. qu. 19**): “God made man immortal as long as he did not sin; so that he might achieve for himself life or death.” For man’s body was indissoluble not by reason of any intrinsic vigor of immortality, but by reason of a supernatural force given by God to the soul, whereby it was enabled to preserve the body from all corruption so long as it remained itself subject to God. This entirely agrees with reason; for since the rational soul surpasses the capacity of corporeal matter, as above explained (*q. 76, a. 1*), it was most properly endowed at the beginning with the power of preserving the body in a manner surpassing the capacity of corporeal matter.

Reply obj. 1 and 2: These objections are founded on natural incorruptibility and immortality.

Reply to Objection 3. This power of preserving the body was not natural to the soul, but was the gift of grace. And though man recovered grace as regards remission of guilt and the merit of glory; yet he did not recover immortality, the loss of which was an effect of sin; for this was reserved for Christ to accomplish, by Whom the defect of nature was to be restored into something better, as we shall explain further on (*IIIa, q. 14, a. 4, ad 1*).

Reply to Objection 4. The promised reward of the immortality of glory differs from the immortality which was bestowed on man in the state of innocence.

* Work of an anonymous author, among the supposititious works of St. Augustine

Objection 1. It would seem that in the state of innocence man was passible. For “sensation is a kind of passion.” But in the state of innocence man would have been sensitive. Therefore he would have been passible.

Objection 2. Further, sleep is a kind of passion. Now, man slept in the state of innocence, according to Gn. 2:21, “God cast a deep sleep upon Adam.” Therefore he would have been passible.

Objection 3. Further, the same passage goes on to say that “He took a rib out of Adam.” Therefore he was passible even to the degree of the cutting out of part of his body.

Objection 4. Further, man’s body was soft. But a soft body is naturally passible as regards a hard body; therefore if a hard body had come in contact with the soft body of the first man, the latter would have suffered from the impact. Therefore the first man was passible.

On the contrary, Had man been passible, he would have been also corruptible, because, as the Philosopher says (Top. vi, 3): “Excessive suffering wastes the very substance.”

I answer that, “Passion” may be taken in two senses. First, in its proper sense, and thus a thing is said to suffer when changed from its natural disposition. For passion is the effect of action; and in nature contraries are mutually active or passive, according as one thing

changes another from its natural disposition. Secondly, “passion” can be taken in a general sense for any kind of change, even if belonging to the perfecting process of nature. Thus understanding and sensation are said to be passions. In this second sense, man was passible in the state of innocence, and was passive both in soul and body. In the first sense, man was impassible, both in soul and body, as he was likewise immortal; for he could curb his passion, as he could avoid death, so long as he refrained from sin.

Thus it is clear how to reply to the first two objections; since sensation and sleep do not remove from man his natural disposition, but are ordered to his natural welfare.

Reply to Objection 3. As already explained (q. 92, a. 3, ad 2), the rib was in Adam as the principle of the human race, as the semen in man, who is a principle through generation. Hence as man does not suffer any natural deterioration by seminal issue; so neither did he through the separation of the rib.

Reply to Objection 4. Man’s body in the state of innocence could be preserved from suffering injury from a hard body; partly by the use of his reason, whereby he could avoid what was harmful; and partly also by Divine Providence, so preserving him, that nothing of a harmful nature could come upon him unawares.

Objection 1. It would seem that in the state of innocence man did not require food. For food is necessary for man to restore what he has lost. But Adam’s body suffered no loss, as being incorruptible. Therefore he had no need of food.

Objection 2. Further, food is needed for nourishment. But nourishment involves passibility. Since, then, man’s body was impassible; it does not appear how food could be needful to him.

Objection 3. Further, we need food for the preservation of life. But Adam could preserve his life otherwise; for had he not sinned, he would not have died. Therefore he did not require food.

Objection 4. Further, the consumption of food involves voiding of the surplus, which seems unsuitable to the state of innocence. Therefore it seems that man did not take food in the primitive state.

On the contrary, It is written (Gn. 2:16): “Of every tree in paradise ye shall [Vulg. ‘thou shalt’] eat.”

I answer that, In the state of innocence man had an animal life requiring food; but after the resurrection he will have a spiritual life needing no food. In order to make this clear, we must observe that the rational soul is both soul and spirit. It is called a soul by reason of

what it possesses in common with other souls—that is, as giving life to the body; whence it is written (Gn. 2:7): “Man was made into a living soul”; that is, a soul giving life to the body. But the soul is called a spirit according to what properly belongs to itself, and not to other souls, as possessing an intellectual immaterial power.

Thus in the primitive state, the rational soul communicated to the body what belonged to itself as a soul; and so the body was called “animal”*, through having its life from the soul. Now the first principle of life in these inferior creatures as the Philosopher says (De Anima ii, 4) is the vegetative soul: the operations of which are the use of food, generation, and growth. Wherefore such operations befitted man in the state of innocence. But in the final state, after the resurrection, the soul will, to a certain extent, communicate to the body what properly belongs to itself as a spirit; immortality to everyone; impassibility, glory, and power to the good, whose bodies will be called “spiritual.” So, after the resurrection, man will not require food; whereas he required it in the state of innocence.

Reply to Objection 1. As Augustine says (QQ. Vet. et Nov. Test. qu. 19[†]): “How could man have an immortal body, which was sustained by food? Since an

* From ‘anima’, a soul; Cf. 1 Cor. 15:44 seqq. † Works of an anonymous author, among the supposititious works of St. Augustine

immortal being needs neither food nor drink.” For we have explained (a. 1) that the immortality of the primitive state was based on a supernatural force in the soul, and not on any intrinsic disposition of the body: so that by the action of heat, the body might lose part of its humid qualities; and to prevent the entire consumption of the humor, man was obliged to take food.

Reply to Objection 2. A certain passion and alteration attends nutriment, on the part of the food changed into the substance of the thing nourished. So we cannot thence conclude that man’s body was passible, but that the food taken was passible; although this kind of passion conduced to the perfection of the nature.

Reply to Objection 3. If man had not taken food he would have sinned; as he also sinned by taking the forbidden fruit. For he was told at the same time, to abstain from the tree of knowledge of good and evil, and to eat of every other tree of Paradise.

Reply to Objection 4. Some say that in the state of innocence man would not have taken more than necessary food, so that there would have been nothing superfluous; which, however, is unreasonable to suppose, as implying that there would have been no faecal matter. Wherefore there was need for voiding the surplus, yet so disposed by God as to be decorous and suitable to the state.

Whether in the state of innocence man would have acquired immortality by the tree of life?

Ia q. 97 a. 4

Objection 1. It would seem that the tree of life could not be the cause of immortality. For nothing can act beyond its own species; as an effect does not exceed its cause. But the tree of life was corruptible, otherwise it could not be taken as food; since food is changed into the substance of the thing nourished. Therefore the tree of life could not give incorruptibility or immortality.

Objection 2. Further, effects caused by the forces of plants and other natural agencies are natural. If therefore the tree of life caused immortality, this would have been natural immortality.

Objection 3. Further, this would seem to be reduced to the ancient fable, that the gods, by eating a certain food, became immortal; which the Philosopher ridicules (Metaph. iii, Did. ii, 4).

On the contrary, It is written (Gn. 3:22): “Lest perhaps he put forth his hand, and take of the tree of life, and eat, and live for ever.” Further, Augustine says (QQ. Vet. et Nov. Test. qu. 19*): “A taste of the tree of life warded off corruption of the body; and even after sin man would have remained immortal, had he been allowed to eat of the tree of life.”

I answer that, The tree of life in a certain degree was the cause of immortality, but not absolutely. To understand this, we must observe that in the primitive state man possessed, for the preservation of life, two remedies, against two defects. One of these defects was the loss of humidity by the action of natural heat, which acts as the soul’s instrument: as a remedy against such loss man was provided with food, taken from the other trees of paradise, as now we are provided with the food, which we take for the same purpose. The second defect, as the Philosopher says (De Gener. i, 5), arises from the fact that the humor which is caused from extraneous sources, being added to the humor already existing, lessens the specific active power: as water added to wine takes at first the taste of wine, then, as more water is added, the strength of the wine is diminished,

till the wine becomes watery. In like manner, we may observe that at first the active force of the species is so strong that it is able to transform so much of the food as is required to replace the lost tissue, as well as what suffices for growth; later on, however, the assimilated food does not suffice for growth, but only replaces what is lost. Last of all, in old age, it does not suffice even for this purpose; whereupon the body declines, and finally dies from natural causes. Against this defect man was provided with a remedy in the tree of life; for its effect was to strengthen the force of the species against the weakness resulting from the admixture of extraneous nutriment. Wherefore Augustine says (De Civ. Dei xiv, 26): “Man had food to appease his hunger, drink to slake his thirst; and the tree of life to banish the breaking up of old age”; and (QQ. Vet. et Nov. Test. qu. 19†) “The tree of life, like a drug, warded off all bodily corruption.”

Yet it did not absolutely cause immortality; for neither was the soul’s intrinsic power of preserving the body due to the tree of life, nor was it of such efficiency as to give the body a disposition to immortality, whereby it might become indissoluble; which is clear from the fact that every bodily power is finite; so the power of the tree of life could not go so far as to give the body the prerogative of living for an infinite time, but only for a definite time. For it is manifest that the greater a force is, the more durable is its effect; therefore, since the power of the tree of life was finite, man’s life was to be preserved for a definite time by partaking of it once; and when that time had elapsed, man was to be either transferred to a spiritual life, or had need to eat once more of the tree of life.

From this the replies to the objections clearly appear. For the first proves that the tree of life did not absolutely cause immortality; while the others show that it caused incorruption by warding off corruption, according to the explanation above given.

* Work of an anonymous author, among the supposititious works of St. Augustine † Work of an anonymous author, among the supposititious works of St. Augustine

Objection 1. It would seem that in the state of innocence man was not immortal. For the term “mortal” belongs to the definition of man. But if you take away the definition, you take away the thing defined. Therefore as long as man was man he could not be immortal.

Objection 2. Further, corruptible and incorruptible are generically distinct, as the Philosopher says (*Metaph. x, Did. ix, 10*). But there can be no passing from one genus to another. Therefore if the first man was incorruptible, man could not be corruptible in the present state.

Objection 3. Further, if man were immortal in the state of innocence, this would have been due either to nature or to grace. Not to nature, for since nature does not change within the same species, he would also have been immortal now. Likewise neither would this be owing to grace; for the first man recovered grace by repentance, according to *Wis. 10:2*: “He brought him out of his sins.” Hence he would have regained his immortality; which is clearly not the case. Therefore man was not immortal in the state of innocence.

Objection 4. Further, immortality is promised to man as a reward, according to *Apoc. 21:4*: “Death shall be no more.” But man was not created in the state of reward, but that he might deserve the reward. Therefore man was not immortal in the state of innocence.

On the contrary, It is written (*Rom. 5:12*): “By sin death came into the world.” Therefore man was immortal before sin.

I answer that, A thing may be incorruptible in three ways. First, on the part of matter—that is to say, either because it possesses no matter, like an angel; or because it possesses matter that is in potentiality to one form only, like the heavenly bodies. Such things as these are incorruptible by their very nature. Secondly, a thing is incorruptible in its form, inasmuch as being by nature

corruptible, yet it has an inherent disposition which preserves it wholly from corruption; and this is called incorruptibility of glory; because as Augustine says (*Ep. ad Dioscor.*): “God made man’s soul of such a powerful nature, that from its fulness of beatitude, there redounds to the body a fulness of health, with the vigor of incorruption.” Thirdly, a thing may be incorruptible on the part of its efficient cause; in this sense man was incorruptible and immortal in the state of innocence. For, as Augustine says (*QQ. Vet. et Nov. Test. qu. 19**): “God made man immortal as long as he did not sin; so that he might achieve for himself life or death.” For man’s body was indissoluble not by reason of any intrinsic vigor of immortality, but by reason of a supernatural force given by God to the soul, whereby it was enabled to preserve the body from all corruption so long as it remained itself subject to God. This entirely agrees with reason; for since the rational soul surpasses the capacity of corporeal matter, as above explained (*q. 76, a. 1*), it was most properly endowed at the beginning with the power of preserving the body in a manner surpassing the capacity of corporeal matter.

Reply obj. 1 and 2: These objections are founded on natural incorruptibility and immortality.

Reply to Objection 3. This power of preserving the body was not natural to the soul, but was the gift of grace. And though man recovered grace as regards remission of guilt and the merit of glory; yet he did not recover immortality, the loss of which was an effect of sin; for this was reserved for Christ to accomplish, by Whom the defect of nature was to be restored into something better, as we shall explain further on (*IIIa, q. 14, a. 4, ad 1*).

Reply to Objection 4. The promised reward of the immortality of glory differs from the immortality which was bestowed on man in the state of innocence.

* Work of an anonymous author, among the supposititious works of St. Augustine

Objection 1. It would seem that in the state of innocence man was passible. For “sensation is a kind of passion.” But in the state of innocence man would have been sensitive. Therefore he would have been passible.

Objection 2. Further, sleep is a kind of passion. Now, man slept in the state of innocence, according to Gn. 2:21, “God cast a deep sleep upon Adam.” Therefore he would have been passible.

Objection 3. Further, the same passage goes on to say that “He took a rib out of Adam.” Therefore he was passible even to the degree of the cutting out of part of his body.

Objection 4. Further, man’s body was soft. But a soft body is naturally passible as regards a hard body; therefore if a hard body had come in contact with the soft body of the first man, the latter would have suffered from the impact. Therefore the first man was passible.

On the contrary, Had man been passible, he would have been also corruptible, because, as the Philosopher says (Top. vi, 3): “Excessive suffering wastes the very substance.”

I answer that, “Passion” may be taken in two senses. First, in its proper sense, and thus a thing is said to suffer when changed from its natural disposition. For passion is the effect of action; and in nature contraries are mutually active or passive, according as one thing

changes another from its natural disposition. Secondly, “passion” can be taken in a general sense for any kind of change, even if belonging to the perfecting process of nature. Thus understanding and sensation are said to be passions. In this second sense, man was passible in the state of innocence, and was passive both in soul and body. In the first sense, man was impassible, both in soul and body, as he was likewise immortal; for he could curb his passion, as he could avoid death, so long as he refrained from sin.

Thus it is clear how to reply to the first two objections; since sensation and sleep do not remove from man his natural disposition, but are ordered to his natural welfare.

Reply to Objection 3. As already explained (q. 92, a. 3, ad 2), the rib was in Adam as the principle of the human race, as the semen in man, who is a principle through generation. Hence as man does not suffer any natural deterioration by seminal issue; so neither did he through the separation of the rib.

Reply to Objection 4. Man’s body in the state of innocence could be preserved from suffering injury from a hard body; partly by the use of his reason, whereby he could avoid what was harmful; and partly also by Divine Providence, so preserving him, that nothing of a harmful nature could come upon him unawares.

Objection 1. It would seem that in the state of innocence man did not require food. For food is necessary for man to restore what he has lost. But Adam's body suffered no loss, as being incorruptible. Therefore he had no need of food.

Objection 2. Further, food is needed for nourishment. But nourishment involves passibility. Since, then, man's body was impassible; it does not appear how food could be needful to him.

Objection 3. Further, we need food for the preservation of life. But Adam could preserve his life otherwise; for had he not sinned, he would not have died. Therefore he did not require food.

Objection 4. Further, the consumption of food involves voiding of the surplus, which seems unsuitable to the state of innocence. Therefore it seems that man did not take food in the primitive state.

On the contrary, It is written (Gn. 2:16): "Of every tree in paradise ye shall [Vulg. 'thou shalt'] eat."

I answer that, In the state of innocence man had an animal life requiring food; but after the resurrection he will have a spiritual life needing no food. In order to make this clear, we must observe that the rational soul is both soul and spirit. It is called a soul by reason of what it possesses in common with other souls—that is, as giving life to the body; whence it is written (Gn. 2:7): "Man was made into a living soul"; that is, a soul giving life to the body. But the soul is called a spirit according to what properly belongs to itself, and not to other souls, as possessing an intellectual immaterial power.

Thus in the primitive state, the rational soul communicated to the body what belonged to itself as a soul; and so the body was called "animal"* , through having its life from the soul. Now the first principle of life in these inferior creatures as the Philosopher says (De Anima ii, 4) is the vegetative soul: the operations of which are the use of food, generation, and growth. Wherefore

such operations befitted man in the state of innocence. But in the final state, after the resurrection, the soul will, to a certain extent, communicate to the body what properly belongs to itself as a spirit; immortality to everyone; impassibility, glory, and power to the good, whose bodies will be called "spiritual." So, after the resurrection, man will not require food; whereas he required it in the state of innocence.

Reply to Objection 1. As Augustine says (QQ. Vet. et Nov. Test. qu. 19[†]): "How could man have an immortal body, which was sustained by food? Since an immortal being needs neither food nor drink." For we have explained (a. 1) that the immortality of the primitive state was based on a supernatural force in the soul, and not on any intrinsic disposition of the body: so that by the action of heat, the body might lose part of its humid qualities; and to prevent the entire consumption of the humor, man was obliged to take food.

Reply to Objection 2. A certain passion and alteration attends nutriment, on the part of the food changed into the substance of the thing nourished. So we cannot thence conclude that man's body was passible, but that the food taken was passible; although this kind of passion conduced to the perfection of the nature.

Reply to Objection 3. If man had not taken food he would have sinned; as he also sinned by taking the forbidden fruit. For he was told at the same time, to abstain from the tree of knowledge of good and evil, and to eat of every other tree of Paradise.

Reply to Objection 4. Some say that in the state of innocence man would not have taken more than necessary food, so that there would have been nothing superfluous; which, however, is unreasonable to suppose, as implying that there would have been no faecal matter. Wherefore there was need for voiding the surplus, yet so disposed by God as to be decorous and suitable to the state.

* From 'anima', a soul; Cf. 1 Cor. 15:44 seqq. † Works of an anonymous author, among the supposititious works of St. Augustine

Objection 1. It would seem that the tree of life could not be the cause of immortality. For nothing can act beyond its own species; as an effect does not exceed its cause. But the tree of life was corruptible, otherwise it could not be taken as food; since food is changed into the substance of the thing nourished. Therefore the tree of life could not give incorruptibility or immortality.

Objection 2. Further, effects caused by the forces of plants and other natural agencies are natural. If therefore the tree of life caused immortality, this would have been natural immortality.

Objection 3. Further, this would seem to be reduced to the ancient fable, that the gods, by eating a certain food, became immortal; which the Philosopher ridicules (*Metaph. iii, Did. ii, 4*).

On the contrary, It is written (*Gn. 3:22*): “Lest perhaps he put forth his hand, and take of the tree of life, and eat, and live for ever.” Further, Augustine says (*QQ. Vet. et Nov. Test. qu. 19**): “A taste of the tree of life warded off corruption of the body; and even after sin man would have remained immortal, had he been allowed to eat of the tree of life.”

I answer that, The tree of life in a certain degree was the cause of immortality, but not absolutely. To understand this, we must observe that in the primitive state man possessed, for the preservation of life, two remedies, against two defects. One of these defects was the loss of humidity by the action of natural heat, which acts as the soul’s instrument: as a remedy against such loss man was provided with food, taken from the other trees of paradise, as now we are provided with the food, which we take for the same purpose. The second defect, as the Philosopher says (*De Gener. i, 5*), arises from the fact that the humor which is caused from extraneous sources, being added to the humor already existing, lessens the specific active power: as water added to wine takes at first the taste of wine, then, as more water is added, the strength of the wine is diminished,

till the wine becomes watery. In like manner, we may observe that at first the active force of the species is so strong that it is able to transform so much of the food as is required to replace the lost tissue, as well as what suffices for growth; later on, however, the assimilated food does not suffice for growth, but only replaces what is lost. Last of all, in old age, it does not suffice even for this purpose; whereupon the body declines, and finally dies from natural causes. Against this defect man was provided with a remedy in the tree of life; for its effect was to strengthen the force of the species against the weakness resulting from the admixture of extraneous nutriment. Wherefore Augustine says (*De Civ. Dei xiv, 26*): “Man had food to appease his hunger, drink to slake his thirst; and the tree of life to banish the breaking up of old age”; and (*QQ. Vet. et Nov. Test. qu. 19†*) “The tree of life, like a drug, warded off all bodily corruption.”

Yet it did not absolutely cause immortality; for neither was the soul’s intrinsic power of preserving the body due to the tree of life, nor was it of such efficiency as to give the body a disposition to immortality, whereby it might become indissoluble; which is clear from the fact that every bodily power is finite; so the power of the tree of life could not go so far as to give the body the prerogative of living for an infinite time, but only for a definite time. For it is manifest that the greater a force is, the more durable is its effect; therefore, since the power of the tree of life was finite, man’s life was to be preserved for a definite time by partaking of it once; and when that time had elapsed, man was to be either transferred to a spiritual life, or had need to eat once more of the tree of life.

From this the replies to the objections clearly appear. For the first proves that the tree of life did not absolutely cause immortality; while the others show that it caused incorruption by warding off corruption, according to the explanation above given.

FIRST PART, QUESTION 98

Of the Preservation of the Species (In Two Articles)

We next consider what belongs to the preservation of the species; and, first, of generation; secondly, of the state of the offspring. Under the first head there are two points of inquiry:

- (1) Whether in the state of innocence there would have been generation?
- (2) Whether generation would have been through coition?

Whether in the state of innocence generation existed?

Ia q. 98 a. 1

Objection 1. It would seem there would have been no generation in the state of innocence. For, as stated in Phys. v, 5, “corruption is contrary to generation.” But contraries affect the same subject: also there would have been no corruption in the state of innocence. Therefore neither would there have been generation.

Objection 2. Further, the object of generation is the preservation in the species of that which is corruptible in the individual. Wherefore there is no generation in those individual things which last for ever. But in the state of innocence man would have lived for ever. Therefore in the state of innocence there would have been no generation.

Objection 3. Further, by generation man is multiplied. But the multiplication of masters requires the division of property, to avoid confusion of mastership. Therefore, since man was made master of the animals, it would have been necessary to make a division of rights when the human race increased by generation. This is against the natural law, according to which all things are in common, as Isidore says (Etym. v, 4). Therefore there would have been no generation in the state of innocence.

On the contrary, It is written (Gn. 1:28): “Increase and multiply, and fill the earth.” But this increase could not come about save by generation, since the original number of mankind was two only. Therefore there would have been generation in the state of innocence.

I answer that, In the state of innocence there would have been generation of offspring for the multiplication of the human race; otherwise man’s sin would have been very necessary, for such a great blessing to be its result. We must, therefore, observe that man, by his nature, is established, as it were, midway between corruptible and incorruptible creatures, his soul being naturally incorruptible, while his body is naturally corruptible. We must also observe that nature’s purpose appears to be different as regards corruptible and incorruptible things. For that seems to be the direct purpose of nature, which

is invariable and perpetual; while what is only for a time is seemingly not the chief purpose of nature, but as it were, subordinate to something else; otherwise, when it ceased to exist, nature’s purpose would become void.

Therefore, since in things corruptible none is everlasting and permanent except the species, it follows that the chief purpose of nature is the good of the species; for the preservation of which natural generation is ordained. On the other hand, incorruptible substances survive, not only in the species, but also in the individual; wherefore even the individuals are included in the chief purpose of nature.

Hence it belongs to man to beget offspring, on the part of the naturally corruptible body. But on the part of the soul, which is incorruptible, it is fitting that the multitude of individuals should be the direct purpose of nature, or rather of the Author of nature, Who alone is the Creator of the human soul. Wherefore, to provide for the multiplication of the human race, He established the begetting of offspring even in the state of innocence.

Reply to Objection 1. In the state of innocence the human body was in itself corruptible, but it could be preserved from corruption by the soul. Therefore, since generation belongs to things corruptible, man was not to be deprived thereof.

Reply to Objection 2. Although generation in the state of innocence might not have been required for the preservation of the species, yet it would have been required for the multiplication of the individual.

Reply to Objection 3. In our present state a division of possessions is necessary on account of the multiplicity of masters, inasmuch as community of possession is a source of strife, as the Philosopher says (Politic. ii, 5). In the state of innocence, however, the will of men would have been so ordered that without any danger of strife they would have used in common, according to each one’s need, those things of which they were masters—a state of things to be observed even now among many good men.

Objection 1. It would seem that generation by coition would not have existed in the state of innocence. For, as Damascene says (*De Fide Orth.* ii, 11; iv, 25), the first man in the terrestrial Paradise was “like an angel.” But in the future state of the resurrection, when men will be like the angels, “they shall neither marry nor be married,” as is written *Mat. 22:30*. Therefore neither in paradise would there have been generation by coition.

Objection 2. Further, our first parents were created at the age of perfect development. Therefore, if generation by coition had existed before sin, they would have had intercourse while still in paradise: which was not the case according to Scripture (*Gn. 4:1*).

Objection 3. Further, in carnal intercourse, more than at any other time, man becomes like the beasts, on account of the vehement delight which he takes therein; whence contingency is praiseworthy, whereby man refrains from such pleasures. But man is compared to beasts by reason of sin, according to *Ps. 48:13*: “Man, when he was in honor, did not understand; he is compared to senseless beasts, and is become like to them.” Therefore, before sin, there would have been no such intercourse of man and woman.

Objection 4. Further, in the state of innocence there would have been no corruption. But virginal integrity is corrupted by intercourse. Therefore there would have been no such thing in the state of innocence.

On the contrary, God made man and woman before sin (*Gn. 1,2*). But nothing is void in God’s works. Therefore, even if man had not sinned, there would have been such intercourse, to which the distinction of sex is ordained. Moreover, we are told that woman was made to be a help to man (*Gn. 2:18,20*). But she is not fitted to help man except in generation, because another man would have proved a more effective help in anything else. Therefore there would have been such generation also in the state of innocence.

I answer that, Some of the earlier doctors, considering the nature of concupiscence as regards generation in our present state, concluded that in the state of innocence generation would not have been effected in the same way. Thus Gregory of Nyssa says (*De Hom. Opif. xvii*) that in paradise the human race would have been multiplied by some other means, as the angels were multiplied without coition by the operation of the Divine Power. He adds that God made man male and female before sin, because He foreknew the mode of generation which would take place after sin, which He foresaw. But this is unreasonable. For what is natural to man was neither acquired nor forfeited by sin. Now it is clear that generation by coition is natural to man by reason of his animal life, which he possessed even before sin, as above explained (q. 97, a. 3), just as it is natural to other perfect animals, as the corporeal members make it clear. So we cannot allow that these members

would not have had a natural use, as other members had, before sin.

Thus, as regards generation by coition, there are, in the present state of life, two things to be considered. One, which comes from nature, is the union of man and woman; for in every act of generation there is an active and a passive principle. Wherefore, since wherever there is distinction of sex, the active principle is male and the passive is female; the order of nature demands that for the purpose of generation there should be concurrence of male and female. The second thing to be observed is a certain deformity of excessive concupiscence, which in the state of innocence would not have existed, when the lower powers were entirely subject to reason. Wherefore Augustine says (*De Civ. Dei xiv, 26*): “We must be far from supposing that offspring could not be begotten without concupiscence. All the bodily members would have been equally moved by the will, without ardent or wanton incentive, with calmness of soul and body.”

Reply to Objection 1. In paradise man would have been like an angel in his spirituality of mind, yet with an animal life in his body. After the resurrection man will be like an angel, spiritualized in soul and body. Wherefore there is no parallel.

Reply to Objection 2. As Augustine says (*Gen. ad lit. ix, 4*), our first parents did not come together in paradise, because on account of sin they were ejected from paradise shortly after the creation of the woman; or because, having received the general Divine command relative to generation, they awaited the special command relative to time.

Reply to Objection 3. Beasts are without reason. In this way man becomes, as it were, like them in coition, because he cannot moderate concupiscence. In the state of innocence nothing of this kind would have happened that was not regulated by reason, not because delight of sense was less, as some say (rather indeed would sensible delight have been the greater in proportion to the greater purity of nature and the greater sensibility of the body), but because the force of concupiscence would not have so inordinately thrown itself into such pleasure, being curbed by reason, whose place it is not to lessen sensual pleasure, but to prevent the force of concupiscence from cleaving to it immoderately. By “immoderately” I mean going beyond the bounds of reason, as a sober person does not take less pleasure in food taken in moderation than the glutton, but his concupiscence lingers less in such pleasures. This is what Augustine means by the words quoted, which do not exclude intensity of pleasure from the state of innocence, but ardor of desire and restlessness of the mind. Therefore continence would not have been praiseworthy in the state of innocence, whereas it is praiseworthy in our present state, not because it removes fecundity, but because it excludes inordinate desire. In that state fecun-

dity would have been without lust.

Reply to Objection 4. As Augustine says (*De Civ. Dei* xiv, 26): In that state “intercourse would have been without prejudice to virginal integrity; this would have remained intact, as it does in the menses. And just as in

giving birth the mother was then relieved, not by groans of pain, but by the instigations of maturity; so in conceiving, the union was one, not of lustful desire, but of deliberate action.”

Objection 1. It would seem there would have been no generation in the state of innocence. For, as stated in *Phys.* v, 5, “corruption is contrary to generation.” But contraries affect the same subject: also there would have been no corruption in the state of innocence. Therefore neither would there have been generation.

Objection 2. Further, the object of generation is the preservation in the species of that which is corruptible in the individual. Wherefore there is no generation in those individual things which last for ever. But in the state of innocence man would have lived for ever. Therefore in the state of innocence there would have been no generation.

Objection 3. Further, by generation man is multiplied. But the multiplication of masters requires the division of property, to avoid confusion of mastership. Therefore, since man was made master of the animals, it would have been necessary to make a division of rights when the human race increased by generation. This is against the natural law, according to which all things are in common, as Isidore says (*Etym.* v, 4). Therefore there would have been no generation in the state of innocence.

On the contrary, It is written (*Gn.* 1:28): “Increase and multiply, and fill the earth.” But this increase could not come about save by generation, since the original number of mankind was two only. Therefore there would have been generation in the state of innocence.

I answer that, In the state of innocence there would have been generation of offspring for the multiplication of the human race; otherwise man’s sin would have been very necessary, for such a great blessing to be its result. We must, therefore, observe that man, by his nature, is established, as it were, midway between corruptible and incorruptible creatures, his soul being naturally incorruptible, while his body is naturally corruptible. We must also observe that nature’s purpose appears to be different as regards corruptible and incorruptible things. For that seems to be the direct purpose of nature, which

is invariable and perpetual; while what is only for a time is seemingly not the chief purpose of nature, but as it were, subordinate to something else; otherwise, when it ceased to exist, nature’s purpose would become void.

Therefore, since in things corruptible none is everlasting and permanent except the species, it follows that the chief purpose of nature is the good of the species; for the preservation of which natural generation is ordained. On the other hand, incorruptible substances survive, not only in the species, but also in the individual; wherefore even the individuals are included in the chief purpose of nature.

Hence it belongs to man to beget offspring, on the part of the naturally corruptible body. But on the part of the soul, which is incorruptible, it is fitting that the multitude of individuals should be the direct purpose of nature, or rather of the Author of nature, Who alone is the Creator of the human soul. Wherefore, to provide for the multiplication of the human race, He established the begetting of offspring even in the state of innocence.

Reply to Objection 1. In the state of innocence the human body was in itself corruptible, but it could be preserved from corruption by the soul. Therefore, since generation belongs to things corruptible, man was not to be deprived thereof.

Reply to Objection 2. Although generation in the state of innocence might not have been required for the preservation of the species, yet it would have been required for the multiplication of the individual.

Reply to Objection 3. In our present state a division of possessions is necessary on account of the multiplicity of masters, inasmuch as community of possession is a source of strife, as the Philosopher says (*Politic.* ii, 5). In the state of innocence, however, the will of men would have been so ordered that without any danger of strife they would have used in common, according to each one’s need, those things of which they were masters—a state of things to be observed even now among many good men.

Objection 1. It would seem that generation by coition would not have existed in the state of innocence. For, as Damascene says (*De Fide Orth.* ii, 11; iv, 25), the first man in the terrestrial Paradise was “like an angel.” But in the future state of the resurrection, when men will be like the angels, “they shall neither marry nor be married,” as is written *Mat. 22:30*. Therefore neither in paradise would there have been generation by coition.

Objection 2. Further, our first parents were created at the age of perfect development. Therefore, if generation by coition had existed before sin, they would have had intercourse while still in paradise: which was not the case according to Scripture (*Gn. 4:1*).

Objection 3. Further, in carnal intercourse, more than at any other time, man becomes like the beasts, on account of the vehement delight which he takes therein; whence contingency is praiseworthy, whereby man refrains from such pleasures. But man is compared to beasts by reason of sin, according to *Ps. 48:13*: “Man, when he was in honor, did not understand; he is compared to senseless beasts, and is become like to them.” Therefore, before sin, there would have been no such intercourse of man and woman.

Objection 4. Further, in the state of innocence there would have been no corruption. But virginal integrity is corrupted by intercourse. Therefore there would have been no such thing in the state of innocence.

On the contrary, God made man and woman before sin (*Gn. 1,2*). But nothing is void in God’s works. Therefore, even if man had not sinned, there would have been such intercourse, to which the distinction of sex is ordained. Moreover, we are told that woman was made to be a help to man (*Gn. 2:18,20*). But she is not fitted to help man except in generation, because another man would have proved a more effective help in anything else. Therefore there would have been such generation also in the state of innocence.

I answer that, Some of the earlier doctors, considering the nature of concupiscence as regards generation in our present state, concluded that in the state of innocence generation would not have been effected in the same way. Thus Gregory of Nyssa says (*De Hom. Opif. xvii*) that in paradise the human race would have been multiplied by some other means, as the angels were multiplied without coition by the operation of the Divine Power. He adds that God made man male and female before sin, because He foreknew the mode of generation which would take place after sin, which He foresaw. But this is unreasonable. For what is natural to man was neither acquired nor forfeited by sin. Now it is clear that generation by coition is natural to man by reason of his animal life, which he possessed even before sin, as above explained (q. 97, a. 3), just as it is natural to other perfect animals, as the corporeal members make it clear. So we cannot allow that these members

would not have had a natural use, as other members had, before sin.

Thus, as regards generation by coition, there are, in the present state of life, two things to be considered. One, which comes from nature, is the union of man and woman; for in every act of generation there is an active and a passive principle. Wherefore, since wherever there is distinction of sex, the active principle is male and the passive is female; the order of nature demands that for the purpose of generation there should be concurrence of male and female. The second thing to be observed is a certain deformity of excessive concupiscence, which in the state of innocence would not have existed, when the lower powers were entirely subject to reason. Wherefore Augustine says (*De Civ. Dei xiv, 26*): “We must be far from supposing that offspring could not be begotten without concupiscence. All the bodily members would have been equally moved by the will, without ardent or wanton incentive, with calmness of soul and body.”

Reply to Objection 1. In paradise man would have been like an angel in his spirituality of mind, yet with an animal life in his body. After the resurrection man will be like an angel, spiritualized in soul and body. Wherefore there is no parallel.

Reply to Objection 2. As Augustine says (*Gen. ad lit. ix, 4*), our first parents did not come together in paradise, because on account of sin they were ejected from paradise shortly after the creation of the woman; or because, having received the general Divine command relative to generation, they awaited the special command relative to time.

Reply to Objection 3. Beasts are without reason. In this way man becomes, as it were, like them in coition, because he cannot moderate concupiscence. In the state of innocence nothing of this kind would have happened that was not regulated by reason, not because delight of sense was less, as some say (rather indeed would sensible delight have been the greater in proportion to the greater purity of nature and the greater sensibility of the body), but because the force of concupiscence would not have so inordinately thrown itself into such pleasure, being curbed by reason, whose place it is not to lessen sensual pleasure, but to prevent the force of concupiscence from cleaving to it immoderately. By “immoderately” I mean going beyond the bounds of reason, as a sober person does not take less pleasure in food taken in moderation than the glutton, but his concupiscence lingers less in such pleasures. This is what Augustine means by the words quoted, which do not exclude intensity of pleasure from the state of innocence, but ardor of desire and restlessness of the mind. Therefore continence would not have been praiseworthy in the state of innocence, whereas it is praiseworthy in our present state, not because it removes fecundity, but because it excludes inordinate desire. In that state fecun-

dity would have been without lust.

Reply to Objection 4. As Augustine says (*De Civ. Dei* xiv, 26): In that state “intercourse would have been without prejudice to virginal integrity; this would have remained intact, as it does in the menses. And just as in

giving birth the mother was then relieved, not by groans of pain, but by the instigations of maturity; so in conceiving, the union was one, not of lustful desire, but of deliberate action.”

FIRST PART, QUESTION 99

Of the Condition of the Offspring As to the Body (In Two Articles)

We must now consider the condition of the offspring—first, as regards the body; secondly, as regards virtue; thirdly, in knowledge. Under the first head there are two points of inquiry:

- (1) Whether in the state of innocence children would have had full powers of the body immediately after birth?
- (2) Whether all infants would have been of the male sex?

Whether in the state of innocence children would have had perfect strength of body as to the use of its members immediately after birth?

Ia q. 99 a. 1

Objection 1. It would seem that in the state of innocence children would have had perfect strength of the body, as to the use of its members, immediately after birth. For Augustine says (*De Pecc. Merit. et Remiss.* i, 38): “This weakness of the body befits their weakness of mind.” But in the state of innocence there would have been no weakness of mind. Therefore neither would there have been weakness of body in infants.

Objection 2. Further, some animals at birth have sufficient strength to use their members. But man is nobler than other animals. Therefore much more is it natural to man to have strength to use his members at birth; and thus it appears to be a punishment of sin that he has not that strength.

Objection 3. Further, inability to secure a proffered pleasure causes affliction. But if children had not full strength in the use of their limbs, they would often have been unable to procure something pleasurable offered to them; and so they would have been afflicted, which was not possible before sin. Therefore, in the state of innocence, children would not have been deprived of the use of their limbs.

Objection 4. Further, the weakness of old age seems to correspond to that of infancy. But in the state of innocence there would have been no weakness of old age. Therefore neither would there have been such weakness in infancy.

On the contrary, Everything generated is first imperfect. But in the state of innocence children would have been begotten by generation. Therefore from the first they would have been imperfect in bodily size and power.

I answer that, By faith alone do we hold truths which are above nature, and what we believe rests on authority. Wherefore, in making any assertion, we must be guided by the nature of things, except in those things which are above nature, and are made known to us by Divine authority. Now it is clear that it is as natural as it is befitting to the principles of human nature that children should not have sufficient strength for the use of their limbs immediately after birth. Because in proportion to other animals man has naturally a larger

brain. Wherefore it is natural, on account of the considerable humidity of the brain in children, that the nerves which are instruments of movement, should not be apt for moving the limbs. On the other hand, no Catholic doubts it possible for a child to have, by Divine power, the use of its limbs immediately after birth.

Now we have it on the authority of Scripture that “God made man right” (*Eccles.* 7:30), which rightness, as Augustine says (*De Civ. Dei* xiv, 11), consists in the perfect subjection of the body to the soul. As, therefore, in the primitive state it was impossible to find in the human limbs anything repugnant to man’s well-ordered will, so was it impossible for those limbs to fail in executing the will’s commands. Now the human will is well ordered when it tends to acts which are befitting to man. But the same acts are not befitting to man at every season of life. We must, therefore, conclude that children would not have had sufficient strength for the use of their limbs for the purpose of performing every kind of act; but only for the acts befitting the state of infancy, such as suckling, and the like.

Reply to Objection 1. Augustine is speaking of the weakness which we observe in children even as regards those acts which befit the state of infancy; as is clear from his preceding remark that “even when close to the breast, and longing for it, they are more apt to cry than to suckle.”

Reply to Objection 2. The fact that some animals have the use of their limbs immediately after birth, is due, not to their superiority, since more perfect animals are not so endowed; but to the dryness of the brain, and to the operations proper to such animals being imperfect, so that a small amount of strength suffices them.

Reply obj. 3 is clear from what we have said above. We may add that they would have desired nothing except with an ordinate will; and only what was befitting to their state of life.

Reply to Objection 4. In the state of innocence man would have been born, yet not subject to corruption. Therefore in that state there could have been certain infantile defects which result from birth; but not senile defects leading to corruption.

Objection 1. It would seem that in the primitive state woman would not have been born. For the Philosopher says (*De Gener. Animal.* ii, 3) that woman is a “misbegotten male,” as though she were a product outside the purpose of nature. But in that state nothing would have been unnatural in human generation. Therefore in that state women would not have been born.

Objection 2. Further, every agent produces its like, unless prevented by insufficient power or ineptness of matter: thus a small fire cannot burn green wood. But in generation the active force is in the male. Since, therefore, in the state of innocence man’s active force was not subject to defect, nor was there inept matter on the part of the woman, it seems that males would always have been born.

Objection 3. Further, in the state of innocence generation is ordered to the multiplication of the human race. But the race would have been sufficiently multiplied by the first man and woman, from the fact that they would have lived for ever. Therefore, in the state of innocence, there was no need for women to be born.

On the contrary, Nature’s process in generation would have been in harmony with the manner in which it was established by God. But established male and female in human nature, as it is written (*Gn.* 1,2). Therefore also in the state of innocence male and female would have been born.

I answer that, Nothing belonging to the completeness of human nature would have been lacking in the

state of innocence. And as different grades belong to the perfection of the universe, so also diversity of sex belongs to the perfection of human nature. Therefore in the state of innocence, both sexes would have been begotten.

Reply to Objection 1. Woman is said to be a “misbegotten male,” as being a product outside the purpose of nature considered in the individual case: but not against the purpose of universal nature, as above explained (q. 92, a. 1, ad 2).

Reply to Objection 2. The generation of woman is not occasioned either by a defect of the active force or by inept matter, as the objection proposes; but sometimes by an extrinsic accidental cause; thus the Philosopher says (*De Animal. Histor.* vi, 19): “The northern wind favors the generation of males, and the southern wind that of females”: sometimes also by some impression in the soul (of the parents), which may easily have some effect on the body (of the child). Especially was this the case in the state of innocence, when the body was more subject to the soul; so that by the mere will of the parent the sex of the offspring might be diversified.

Reply to Objection 3. The offspring would have been begotten to an animal life, as to the use of food and generation. Hence it was fitting that all should generate, and not only the first parents. From this it seems to follow that males and females would have been in equal number.

Objection 1. It would seem that in the state of innocence children would have had perfect strength of the body, as to the use of its members, immediately after birth. For Augustine says (*De Pecc. Merit. et Remiss.* i, 38): “This weakness of the body befits their weakness of mind.” But in the state of innocence there would have been no weakness of mind. Therefore neither would there have been weakness of body in infants.

Objection 2. Further, some animals at birth have sufficient strength to use their members. But man is nobler than other animals. Therefore much more is it natural to man to have strength to use his members at birth; and thus it appears to be a punishment of sin that he has not that strength.

Objection 3. Further, inability to secure a proffered pleasure causes affliction. But if children had not full strength in the use of their limbs, they would often have been unable to procure something pleasurable offered to them; and so they would have been afflicted, which was not possible before sin. Therefore, in the state of innocence, children would not have been deprived of the use of their limbs.

Objection 4. Further, the weakness of old age seems to correspond to that of infancy. But in the state of innocence there would have been no weakness of old age. Therefore neither would there have been such weakness in infancy.

On the contrary, Everything generated is first imperfect. But in the state of innocence children would have been begotten by generation. Therefore from the first they would have been imperfect in bodily size and power.

I answer that, By faith alone do we hold truths which are above nature, and what we believe rests on authority. Wherefore, in making any assertion, we must be guided by the nature of things, except in those things which are above nature, and are made known to us by Divine authority. Now it is clear that it is as natural as it is befitting to the principles of human nature that children should not have sufficient strength for the use of their limbs immediately after birth. Because in proportion to other animals man has naturally a larger

brain. Wherefore it is natural, on account of the considerable humidity of the brain in children, that the nerves which are instruments of movement, should not be apt for moving the limbs. On the other hand, no Catholic doubts it possible for a child to have, by Divine power, the use of its limbs immediately after birth.

Now we have it on the authority of Scripture that “God made man right” (*Eccles.* 7:30), which rightness, as Augustine says (*De Civ. Dei* xiv, 11), consists in the perfect subjection of the body to the soul. As, therefore, in the primitive state it was impossible to find in the human limbs anything repugnant to man’s well-ordered will, so was it impossible for those limbs to fail in executing the will’s commands. Now the human will is well ordered when it tends to acts which are befitting to man. But the same acts are not befitting to man at every season of life. We must, therefore, conclude that children would not have had sufficient strength for the use of their limbs for the purpose of performing every kind of act; but only for the acts befitting the state of infancy, such as suckling, and the like.

Reply to Objection 1. Augustine is speaking of the weakness which we observe in children even as regards those acts which befit the state of infancy; as is clear from his preceding remark that “even when close to the breast, and longing for it, they are more apt to cry than to suckle.”

Reply to Objection 2. The fact that some animals have the use of their limbs immediately after birth, is due, not to their superiority, since more perfect animals are not so endowed; but to the dryness of the brain, and to the operations proper to such animals being imperfect, so that a small amount of strength suffices them.

Reply obj. 3 is clear from what we have said above. We may add that they would have desired nothing except with an ordinate will; and only what was befitting to their state of life.

Reply to Objection 4. In the state of innocence man would have been born, yet not subject to corruption. Therefore in that state there could have been certain infantile defects which result from birth; but not senile defects leading to corruption.

Objection 1. It would seem that in the primitive state woman would not have been born. For the Philosopher says (*De Gener. Animal.* ii, 3) that woman is a “misbegotten male,” as though she were a product outside the purpose of nature. But in that state nothing would have been unnatural in human generation. Therefore in that state women would not have been born.

Objection 2. Further, every agent produces its like, unless prevented by insufficient power or ineptness of matter: thus a small fire cannot burn green wood. But in generation the active force is in the male. Since, therefore, in the state of innocence man’s active force was not subject to defect, nor was there inept matter on the part of the woman, it seems that males would always have been born.

Objection 3. Further, in the state of innocence generation is ordered to the multiplication of the human race. But the race would have been sufficiently multiplied by the first man and woman, from the fact that they would have lived for ever. Therefore, in the state of innocence, there was no need for women to be born.

On the contrary, Nature’s process in generation would have been in harmony with the manner in which it was established by God. But established male and female in human nature, as it is written (*Gn.* 1,2). Therefore also in the state of innocence male and female would have been born.

I answer that, Nothing belonging to the completeness of human nature would have been lacking in the

state of innocence. And as different grades belong to the perfection of the universe, so also diversity of sex belongs to the perfection of human nature. Therefore in the state of innocence, both sexes would have been begotten.

Reply to Objection 1. Woman is said to be a “misbegotten male,” as being a product outside the purpose of nature considered in the individual case: but not against the purpose of universal nature, as above explained (q. 92, a. 1, ad 2).

Reply to Objection 2. The generation of woman is not occasioned either by a defect of the active force or by inept matter, as the objection proposes; but sometimes by an extrinsic accidental cause; thus the Philosopher says (*De Animal. Histor.* vi, 19): “The northern wind favors the generation of males, and the southern wind that of females”: sometimes also by some impression in the soul (of the parents), which may easily have some effect on the body (of the child). Especially was this the case in the state of innocence, when the body was more subject to the soul; so that by the mere will of the parent the sex of the offspring might be diversified.

Reply to Objection 3. The offspring would have been begotten to an animal life, as to the use of food and generation. Hence it was fitting that all should generate, and not only the first parents. From this it seems to follow that males and females would have been in equal number.

FIRST PART, QUESTION 100

Of the Condition of the Offspring As Regards Righteousness (In Two Articles)

We now have to consider the condition of the offspring as to righteousness. Under this head there are two points of inquiry:

- (1) Whether men would have been born in a state of righteousness?
- (2) Whether they would have been born confirmed in righteousness?

Whether men would have been born in a state of righteousness?

Ia q. 100 a. 1

Objection 1. It would seem that in the state of innocence men would not have been born in a state of righteousness. For Hugh of St. Victor says (*De Sacram. i*): “Before sin the first man would have begotten children sinless; but not heirs to their father’s righteousness.”

Objection 2. Further, righteousness is effected by grace, as the Apostle says (*Rom. 5:16,21*). Now grace is not transfused from one to another, for thus it would be natural; but is infused by God alone. Therefore children would not have been born righteous.

Objection 3. Further, righteousness is in the soul. But the soul is not transmitted from the parent. Therefore neither would righteousness have been transmitted from parents, to the children.

On the contrary, Anselm says (*De Concep. Virg. x*): “As long as man did not sin, he would have begotten children endowed with righteousness together with the rational soul.”

I answer that, Man naturally begets a specific likeness to himself. Hence whatever accidental qualities result from the nature of the species, must be alike in parent and child, unless nature fails in its operation, which would not have occurred in the state of innocence. But individual accidents do not necessarily exist alike in parent and child. Now original righteousness, in which the first man was created, was an accident pertaining to the nature of the species, not as caused by the principles of the species, but as a gift conferred by God on the entire human nature. This is clear from the fact

that opposites are of the same genus; and original sin, which is opposed to original righteousness, is called the sin of nature, wherefore it is transmitted from the parent to the offspring; and for this reason also, the children would have been assimilated to their parents as regards original righteousness.

Reply to Objection 1. These words of Hugh are to be understood as referring, not to the habit of righteousness, but to the execution of the act thereof.

Reply to Objection 2. Some say that children would have been born, not with the righteousness of grace, which is the principle of merit, but with original righteousness. But since the root of original righteousness, which conferred righteousness on the first man when he was made, consists in the supernatural subjection of the reason to God, which subjection results from sanctifying grace, as above explained (*q. 95, a. 1*), we must conclude that if children were born in original righteousness, they would also have been born in grace; thus we have said above that the first man was created in grace (*q. 95, a. 1*). This grace, however, would not have been natural, for it would not have been transfused by virtue of the semen; but would have been conferred on man immediately on his receiving a rational soul. In the same way the rational soul, which is not transmitted by the parent, is infused by God as soon as the human body is apt to receive it.

From this the reply to the third objection is clear.

Whether in the state of innocence children would have been born confirmed in righteousness?

Ia q. 100 a. 2

Objection 1. It would seem that in the state of innocence children would have been born confirmed in righteousness. For Gregory says (*Moral. iv*) on the words of *Job 3:13*: “For now I should have been asleep, etc.: If no sinful corruption had infected our first parent, he would not have begotten “children of hell”; no children would have been born of him but such as were destined to be saved by the Redeemer.” Therefore all would have been born confirmed in righteousness.

Objection 2. Further, Anselm says (*Cur Deus Homo i, 18*): “If our first parents had lived so as not to yield to temptation, they would have been confirmed

in grace, so that with their offspring they would have been unable to sin any more.” Therefore the children would have been born confirmed in righteousness.

Objection 3. Further, good is stronger than evil. But by the sin of the first man there resulted, in those born of him, the necessity of sin. Therefore, if the first man had persevered in righteousness, his descendants would have derived from him the necessity of preserving righteousness.

Objection 4. Further, the angels who remained faithful to God, while the others sinned, were at once confirmed in grace, so as to be unable henceforth to

sin. In like manner, therefore, man would have been confirmed in grace if he had persevered. But he would have begotten children like himself. Therefore they also would have been born confirmed in righteousness.

On the contrary, Augustine says (De Civ. Dei xiv, 10): “Happy would have been the whole human race if neither they—that is our first parents—had committed any evil to be transmitted to their descendants, nor any of their race had committed any sin for which they would have been condemned.” From which words we gather that even if our first parents had not sinned, any of their descendants might have done evil; and therefore they would not have been born confirmed in righteousness.

I answer that, It does not seem possible that in the state of innocence children would have been born confirmed in righteousness. For it is clear that at their birth they would not have had greater perfection than their parents at the time of begetting. Now the parents, as long as they begot children, would not have been confirmed in righteousness. For the rational creature is confirmed in righteousness through the beatitude given by the clear vision of God; and when once it has seen God, it cannot but cleave to Him Who is the essence of goodness, wherefrom no one can turn away, since nothing is desired or loved but under the aspect of good. I say this according to the general law; for it may be otherwise in the case of special privilege, such as we believe was granted to the Virgin Mother of God. And as soon as Adam had attained to that happy state of seeing God in His Essence, he would have become spiritual in soul and

body; and his animal life would have ceased, wherein alone there is generation. Hence it is clear that children would not have been born confirmed in righteousness.

Reply to Objection 1. If Adam had not sinned, he would not have begotten “children of hell” in the sense that they would contract from him sin which is the cause of hell: yet by sinning of their own free-will they could have become “children of hell.” If, however, they did not become “children of hell” by falling into sin, this would not have been owing to their being confirmed in righteousness, but to Divine Providence preserving them free from sin.

Reply to Objection 2. Anselm does not say this by way of assertion, but only as an opinion, which is clear from his mode of expression as follows: “It seems that if they had lived, etc.”

Reply to Objection 3. This argument is not conclusive, though Anselm seems to have been influenced by it, as appears from his words above quoted. For the necessity of sin incurred by the descendants would not have been such that they could not return to righteousness, which is the case only with the damned. Wherefore neither would the parents have transmitted to their descendants the necessity of not sinning, which is only in the blessed.

Reply to Objection 4. There is no comparison between man and the angels; for man’s free-will is changeable, both before and after choice; whereas the angel’s is not changeable, as we have said above in treating of the angels (q. 64, a. 2).

Objection 1. It would seem that in the state of innocence men would not have been born in a state of righteousness. For Hugh of St. Victor says (*De Sacram. i*): “Before sin the first man would have begotten children sinless; but not heirs to their father’s righteousness.”

Objection 2. Further, righteousness is effected by grace, as the Apostle says (*Rom. 5:16,21*). Now grace is not transfused from one to another, for thus it would be natural; but is infused by God alone. Therefore children would not have been born righteous.

Objection 3. Further, righteousness is in the soul. But the soul is not transmitted from the parent. Therefore neither would righteousness have been transmitted from parents, to the children.

On the contrary, Anselm says (*De Concep. Virg. x*): “As long as man did not sin, he would have begotten children endowed with righteousness together with the rational soul.”

I answer that, Man naturally begets a specific likeness to himself. Hence whatever accidental qualities result from the nature of the species, must be alike in parent and child, unless nature fails in its operation, which would not have occurred in the state of innocence. But individual accidents do not necessarily exist alike in parent and child. Now original righteousness, in which the first man was created, was an accident pertaining to the nature of the species, not as caused by the principles of the species, but as a gift conferred by God on the entire human nature. This is clear from the fact

that opposites are of the same genus; and original sin, which is opposed to original righteousness, is called the sin of nature, wherefore it is transmitted from the parent to the offspring; and for this reason also, the children would have been assimilated to their parents as regards original righteousness.

Reply to Objection 1. These words of Hugh are to be understood as referring, not to the habit of righteousness, but to the execution of the act thereof.

Reply to Objection 2. Some say that children would have been born, not with the righteousness of grace, which is the principle of merit, but with original righteousness. But since the root of original righteousness, which conferred righteousness on the first man when he was made, consists in the supernatural subjection of the reason to God, which subjection results from sanctifying grace, as above explained (q. 95, a. 1), we must conclude that if children were born in original righteousness, they would also have been born in grace; thus we have said above that the first man was created in grace (q. 95, a. 1). This grace, however, would not have been natural, for it would not have been transfused by virtue of the semen; but would have been conferred on man immediately on his receiving a rational soul. In the same way the rational soul, which is not transmitted by the parent, is infused by God as soon as the human body is apt to receive it.

From this the reply to the third objection is clear.

Objection 1. It would seem that in the state of innocence children would have been born confirmed in righteousness. For Gregory says (*Moral.* iv) on the words of Job 3:13: “For now I should have been asleep, etc.: If no sinful corruption had infected our first parent, he would not have begotten “children of hell”; no children would have been born of him but such as were destined to be saved by the Redeemer.” Therefore all would have been born confirmed in righteousness.

Objection 2. Further, Anselm says (*Cur Deus Homo* i, 18): “If our first parents had lived so as not to yield to temptation, they would have been confirmed in grace, so that with their offspring they would have been unable to sin any more.” Therefore the children would have been born confirmed in righteousness.

Objection 3. Further, good is stronger than evil. But by the sin of the first man there resulted, in those born of him, the necessity of sin. Therefore, if the first man had persevered in righteousness, his descendants would have derived from him the necessity of preserving righteousness.

Objection 4. Further, the angels who remained faithful to God, while the others sinned, were at once confirmed in grace, so as to be unable henceforth to sin. In like manner, therefore, man would have been confirmed in grace if he had persevered. But he would have begotten children like himself. Therefore they also would have been born confirmed in righteousness.

On the contrary, Augustine says (*De Civ. Dei* xiv, 10): “Happy would have been the whole human race if neither they—that is our first parents—had committed any evil to be transmitted to their descendants, nor any of their race had committed any sin for which they would have been condemned.” From which words we gather that even if our first parents had not sinned, any of their descendants might have done evil; and therefore they would not have been born confirmed in righteousness.

I answer that, It does not seem possible that in the state of innocence children would have been born confirmed in righteousness. For it is clear that at their birth they would not have had greater perfection than their parents at the time of begetting. Now the parents, as

long as they begot children, would not have been confirmed in righteousness. For the rational creature is confirmed in righteousness through the beatitude given by the clear vision of God; and when once it has seen God, it cannot but cleave to Him Who is the essence of goodness, wherefrom no one can turn away, since nothing is desired or loved but under the aspect of good. I say this according to the general law; for it may be otherwise in the case of special privilege, such as we believe was granted to the Virgin Mother of God. And as soon as Adam had attained to that happy state of seeing God in His Essence, he would have become spiritual in soul and body; and his animal life would have ceased, wherein alone there is generation. Hence it is clear that children would not have been born confirmed in righteousness.

Reply to Objection 1. If Adam had not sinned, he would not have begotten “children of hell” in the sense that they would contract from him sin which is the cause of hell: yet by sinning of their own free-will they could have become “children of hell.” If, however, they did not become “children of hell” by falling into sin, this would not have been owing to their being confirmed in righteousness, but to Divine Providence preserving them free from sin.

Reply to Objection 2. Anselm does not say this by way of assertion, but only as an opinion, which is clear from his mode of expression as follows: “It seems that if they had lived, etc.”

Reply to Objection 3. This argument is not conclusive, though Anselm seems to have been influenced by it, as appears from his words above quoted. For the necessity of sin incurred by the descendants would not have been such that they could not return to righteousness, which is the case only with the damned. Wherefore neither would the parents have transmitted to their descendants the necessity of not sinning, which is only in the blessed.

Reply to Objection 4. There is no comparison between man and the angels; for man’s free-will is changeable, both before and after choice; whereas the angel’s is not changeable, as we have said above in treating of the angels (q. 64, a. 2).

FIRST PART, QUESTION 101

Of the Condition of the Offspring As Regards Knowledge (In Two Articles)

We next consider the condition of the offspring as to knowledge. Under this head there are two points of inquiry:

- (1) Whether in the state of innocence children would have been born with perfect knowledge?
- (2) Whether they would have had perfect use of reason at the moment of birth?

Whether in the state of innocence children would have been born with perfect knowledge?

Ia q. 101 a. 1

Objection 1. It would seem that in the state of innocence children would have been born with perfect knowledge. For Adam would have begotten children like himself. But Adam was gifted with perfect knowledge (q. 94, a. 3). Therefore children would have been born of him with perfect knowledge.

Objection 2. Further, ignorance is a result of sin, as Bede says (Cf. Ia IIae, q. 85, a. 3). But ignorance is privation of knowledge. Therefore before sin children would have had perfect knowledge as soon as they were born.

Objection 3. Further, children would have been gifted with righteousness from birth. But knowledge is required for righteousness, since it directs our actions. Therefore they would also have been gifted with knowledge.

On the contrary, The human soul is naturally “like a blank tablet on which nothing is written,” as the Philosopher says (De Anima iii, 4). But the nature of the soul is the same now as it would have been in the state of innocence. Therefore the souls of children would have been without knowledge at birth.

I answer that, As above stated (q. 99, a. 1), as regards belief in matters which are above nature, we rely on authority alone; and so, when authority is wanting, we must be guided by the ordinary course of nature. Now it is natural for man to acquire knowledge through the senses, as above explained (q. 55, a. 2; q. 84, a. 6); and for this reason is the soul united to the body, that it

needs it for its proper operation; and this would not be so if the soul were endowed at birth with knowledge not acquired through the sensitive powers. We must conclude then, that, in the state of innocence, children would not have been born with perfect knowledge; but in course of time they would have acquired knowledge without difficulty by discovery or learning.

Reply to Objection 1. The perfection of knowledge was an individual accident of our first parent, so far as he was established as the father and instructor of the whole human race. Therefore he begot children like himself, not in that respect, but only in those accidents which were natural or conferred gratuitously on the whole nature.

Reply to Objection 2. Ignorance is privation of knowledge due at some particular time; and this would not have been in children from their birth, for they would have possessed the knowledge due to them at that time. Hence, no ignorance would have been in them, but only nescience in regard to certain matters. Such nescience was even in the holy angels, according to Dionysius (Coel. Hier. vii).

Reply to Objection 3. Children would have had sufficient knowledge to direct them to deeds of righteousness, in which men are guided by universal principles of right; and this knowledge of theirs would have been much more complete than what we have now by nature, as likewise their knowledge of other universal principles.

Whether children would have had perfect use of reason at birth?

Ia q. 101 a. 2

Objection 1. It would seem that children would have had perfect use of reason at birth. For that children have not perfect use of reason in our present state, is due to the soul being weighed down by the body; which was not the case in paradise, because, as it is written, “The corruptible body is a load upon the soul” (Wis. 9:15). Therefore, before sin and the corruption which resulted therefrom, children would have had the perfect use of reason at birth.

Objection 2. Further, some animals at birth have the use of their natural powers, as the lamb at once flees

from the wolf. Much more, therefore, would men in the state of innocence have had perfect use of reason at birth.

On the contrary, In all things produced by generation nature proceeds from the imperfect to the perfect. Therefore children would not have had the perfect use of reason from the very outset.

I answer that, As above stated (q. 84, a. 7), the use of reason depends in a certain manner on the use of the sensitive powers; wherefore, while the senses are tired and the interior sensitive powers hampered, man has not

the perfect use of reason, as we see in those who are asleep or delirious. Now the sensitive powers are situated in corporeal organs; and therefore, so long as the latter are hindered, the action of the former is of necessity hindered also; and likewise, consequently, the use of reason. Now children are hindered in the use of these powers on account of the humidity of the brain; wherefore they have perfect use neither of these powers nor of reason. Therefore, in the state of innocence, children would not have had the perfect use of reason, which they would have enjoyed later on in life. Yet they would have had a more perfect use than they have now,

as to matters regarding that particular state, as explained above regarding the use of their limbs (q. 99, a. 1).

Reply to Objection 1. The corruptible body is a load upon the soul, because it hinders the use of reason even in those matters which belong to man at all ages.

Reply to Objection 2. Even other animals have not at birth such a perfect use of their natural powers as they have later on. This is clear from the fact that birds teach their young to fly; and the like may be observed in other animals. Moreover a special impediment exists in man from the humidity of the brain, as we have said above (q. 99, a. 1).

Objection 1. It would seem that in the state of innocence children would have been born with perfect knowledge. For Adam would have begotten children like himself. But Adam was gifted with perfect knowledge (q. 94, a. 3). Therefore children would have been born of him with perfect knowledge.

Objection 2. Further, ignorance is a result of sin, as Bede says (Cf. Ia IIae, q. 85, a. 3). But ignorance is privation of knowledge. Therefore before sin children would have had perfect knowledge as soon as they were born.

Objection 3. Further, children would have been gifted with righteousness from birth. But knowledge is required for righteousness, since it directs our actions. Therefore they would also have been gifted with knowledge.

On the contrary, The human soul is naturally “like a blank tablet on which nothing is written,” as the Philosopher says (De Anima iii, 4). But the nature of the soul is the same now as it would have been in the state of innocence. Therefore the souls of children would have been without knowledge at birth.

I answer that, As above stated (q. 99, a. 1), as regards belief in matters which are above nature, we rely on authority alone; and so, when authority is wanting, we must be guided by the ordinary course of nature. Now it is natural for man to acquire knowledge through the senses, as above explained (q. 55, a. 2; q. 84, a. 6); and for this reason is the soul united to the body, that it

needs it for its proper operation; and this would not be so if the soul were endowed at birth with knowledge not acquired through the sensitive powers. We must conclude then, that, in the state of innocence, children would not have been born with perfect knowledge; but in course of time they would have acquired knowledge without difficulty by discovery or learning.

Reply to Objection 1. The perfection of knowledge was an individual accident of our first parent, so far as he was established as the father and instructor of the whole human race. Therefore he begot children like himself, not in that respect, but only in those accidents which were natural or conferred gratuitously on the whole nature.

Reply to Objection 2. Ignorance is privation of knowledge due at some particular time; and this would not have been in children from their birth, for they would have possessed the knowledge due to them at that time. Hence, no ignorance would have been in them, but only nescience in regard to certain matters. Such nescience was even in the holy angels, according to Dionysius (Coel. Hier. vii).

Reply to Objection 3. Children would have had sufficient knowledge to direct them to deeds of righteousness, in which men are guided by universal principles of right; and this knowledge of theirs would have been much more complete than what we have now by nature, as likewise their knowledge of other universal principles.

Objection 1. It would seem that children would have had perfect use of reason at birth. For that children have not perfect use of reason in our present state, is due to the soul being weighed down by the body; which was not the case in paradise, because, as it is written, “The corruptible body is a load upon the soul” (Wis. 9:15). Therefore, before sin and the corruption which resulted therefrom, children would have had the perfect use of reason at birth.

Objection 2. Further, some animals at birth have the use of their natural powers, as the lamb at once flees from the wolf. Much more, therefore, would men in the state of innocence have had perfect use of reason at birth.

On the contrary, In all things produced by generation nature proceeds from the imperfect to the perfect. Therefore children would not have had the perfect use of reason from the very outset.

I answer that, As above stated (q. 84, a. 7), the use of reason depends in a certain manner on the use of the sensitive powers; wherefore, while the senses are tired and the interior sensitive powers hampered, man has not the perfect use of reason, as we see in those who are

asleep or delirious. Now the sensitive powers are situate in corporeal organs; and therefore, so long as the latter are hindered, the action of the former is of necessity hindered also; and likewise, consequently, the use of reason. Now children are hindered in the use of these powers on account of the humidity of the brain; wherefore they have perfect use neither of these powers nor of reason. Therefore, in the state of innocence, children would not have had the perfect use of reason, which they would have enjoyed later on in life. Yet they would have had a more perfect use than they have now, as to matters regarding that particular state, as explained above regarding the use of their limbs (q. 99, a. 1).

Reply to Objection 1. The corruptible body is a load upon the soul, because it hinders the use of reason even in those matters which belong to man at all ages.

Reply to Objection 2. Even other animals have not at birth such a perfect use of their natural powers as they have later on. This is clear from the fact that birds teach their young to fly; and the like may be observed in other animals. Moreover a special impediment exists in man from the humidity of the brain, as we have said above (q. 99, a. 1).

FIRST PART, QUESTION 102

Of Man's Abode, Which Is Paradise (In Four Articles)

We next consider man's abode, which is paradise. Under this head there are four points of inquiry:

- (1) Whether paradise is a corporeal place?
- (2) Whether it is a place apt for human habitation?
- (3) For what purpose was man placed in paradise?
- (4) Whether he should have been created in paradise?

Whether paradise is a corporeal place?

Ia q. 102 a. 1

Objection 1. It would seem that paradise is not a corporeal place. For Bede* says that "paradise reaches to the lunar circle." But no earthly place answers that description, both because it is contrary to the nature of the earth to be raised up so high, and because beneath the moon is the region of fire, which would consume the earth. Therefore paradise is not a corporeal place.

Objection 2. Further, Scripture mentions four rivers as rising in paradise (Gn. 2:10). But the rivers there mentioned have visible sources elsewhere, as is clear from the Philosopher (Meteor. i). Therefore paradise is not a corporeal place.

Objection 3. Further, although men have explored the entire habitable world, yet none have made mention of the place of paradise. Therefore apparently it is not a corporeal place.

Objection 4. Further, the tree of life is described as growing in paradise. But the tree of life is a spiritual thing, for it is written of Wisdom that "She is a tree of life to them that lay hold on her" (Prov. 3:18). Therefore paradise also is not a corporeal, but a spiritual place.

Objection 5. Further, if paradise be a corporeal place, the trees also of paradise must be corporeal. But it seems they were not; for corporeal trees were produced on the third day, while the planting of the trees of paradise is recorded after the work of the six days. Therefore paradise was not a corporeal place.

On the contrary, Augustine says (Gen. ad lit. viii, 1): "Three general opinions prevail about paradise. Some understand a place merely corporeal; others a place entirely spiritual; while others, whose opinion, I confess, hold that paradise was both corporeal and spiritual."

I answer that, As Augustine says (De Civ. Dei xiii, 21): "Nothing prevents us from holding, within proper limits, a spiritual paradise; so long as we believe in the truth of the events narrated as having there occurred." For whatever Scripture tells us about paradise is set down as matter of history; and wherever Scripture makes use of this method, we must hold to the historical truth of the narrative as a foundation of whatever spiritual explanation we may offer. And so paradise, as Isidore says (Etym. xiv, 3), "is a place situated in the

east, its name being the Greek for garden." It was fitting that it should be in the east; for it is to be believed that it was situated in the most excellent part of the earth. Now the east is the right hand on the heavens, as the Philosopher explains (De Coel. ii, 2); and the right hand is nobler than the left: hence it was fitting that God should place the earthly paradise in the east.

Reply to Objection 1. Bede's assertion is untrue, if taken in its obvious sense. It may, however, be explained to mean that paradise reaches to the moon, not literally, but figuratively; because, as Isidore says (Etym. xiv, 3), the atmosphere there is "a continually even temperature"; and in this respect it is like the heavenly bodies, which are devoid of opposing elements. Mention, however, is made of the moon rather than of other bodies, because, of all the heavenly bodies, the moon is nearest to us, and is, moreover, the most akin to the earth; hence it is observed to be overshadowed by clouds so as to be almost obscured. Others say that paradise reached to the moon—that is, to the middle space of the air, where rain, and wind, and the like arise; because the moon is said to have influence on such changes. But in this sense it would not be a fit place for human dwelling, through being uneven in temperature, and not attuned to the human temperament, as is the lower atmosphere in the neighborhood of the earth.

Reply to Objection 2. Augustine says (Gen. ad lit. viii, 7): "It is probable that man has no idea where paradise was, and that the rivers, whose sources are said to be known, flowed for some distance underground, and then sprang up elsewhere. For who is not aware that such is the case with some other streams?"

Reply to Objection 3. The situation of paradise is shut off from the habitable world by mountains, or seas, or some torrid region, which cannot be crossed; and so people who have written about topography make no mention of it.

Reply to Objection 4. The tree of life is a material tree, and so called because its fruit was endowed with a life-preserving power as above stated (q. 97, a. 4). Yet it had a spiritual signification; as the rock in the desert was of a material nature, and yet signified Christ. In like manner the tree of the knowledge of good and evil

* Strabus, Gloss on Gn. 2:8

was a material tree, so called in view of future events; because, after eating of it, man was to learn, by experience of the consequent punishment, the difference between the good of obedience and the evil of rebellion. It may also be said to signify spiritually the free-will as some say.

Reply to Objection 5. According to Augustine (Gen. ad lit. v, 5, viii, 3), the plants were not actually produced on the third day, but in their seminal virtues;

whereas, after the work of the six days, the plants, both of paradise and others, were actually produced. According to other holy writers, we ought to say that all the plants were actually produced on the third day, including the trees of paradise; and what is said of the trees of paradise being planted after the work of the six days is to be understood, they say, by way of recapitulation. Whence our text reads: “The Lord God had planted a paradise of pleasure from the beginning” (Gn. 2:8).

Whether paradise was a place adapted to be the abode of man?

Ia q. 102 a. 2

Objection 1. It would seem that paradise was not a place adapted to be the abode of man. For man and angels are similarly ordered to beatitude. But the angels from the very beginning of their existence were made to dwell in the abode of the blessed—that is, the empyrean heaven. Therefore the place of man’s habitation should have been there also.

Objection 2. Further, if some definite place were required for man’s abode, this would be required on the part either of the soul or of the body. If on the part of the soul, the place would be in heaven, which is adapted to the nature of the soul; since the desire of heaven is implanted in all. On the part of the body, there was no need for any other place than the one provided for other animals. Therefore paradise was not at all adapted to be the abode of man.

Objection 3. Further, a place which contains nothing is useless. But after sin, paradise was not occupied by man. Therefore if it were adapted as a dwelling-place for man, it seems that God made paradise to no purpose.

Objection 4. Further, since man is of an even temperament, a fitting place for him should be of even temperature. But paradise was not of an even temperature; for it is said to have been on the equator—a situation of extreme heat, since twice in the year the sun passes vertically over the heads of its inhabitants. Therefore paradise was not a fit dwelling-place for man.

On the contrary, Damascene says (De Fide Orth. ii, 11): “Paradise was a divinely ordered region, and worthy of him who was made to God’s image.”

I answer that, As above stated (q. 97, a. 1), Man was incorruptible and immortal, not because his body had a disposition to incorruptibility, but because in his soul there was a power preserving the body from corruption. Now the human body may be corrupted from within or from without. From within, the body is corrupted by the consumption of the humors, and by old age, as above explained (q. 97, a. 4), and man was able to ward off such corruption by food. Among those things which corrupt the body from without, the chief seems to be an atmosphere of unequal temperature; and to such corruption a remedy is found in an atmosphere of equable nature. In paradise both conditions were found; because, as Damascene says (De Fide

Orth. ii, 11): “Paradise was permeated with the all pervading brightness of a temperate, pure, and exquisite atmosphere, and decked with ever-flowering plants.” Whence it is clear that paradise was most fit to be a dwelling-place for man, and in keeping with his original state of immortality.

Reply to Objection 1. The empyrean heaven is the highest of corporeal places, and is outside the region of change. By the first of these two conditions, it is a fitting abode for the angelic nature: for, as Augustine says (De Trin. ii), “God rules corporeal creatures through spiritual creatures.” Hence it is fitting that the spiritual nature should be established above the entire corporeal nature, as presiding over it. By the second condition, it is a fitting abode for the state of beatitude, which is endowed with the highest degree of stability. Thus the abode of beatitude was suited to the very nature of the angel; therefore he was created there. But it is not suited to man’s nature, since man is not set as a ruler over the entire corporeal creation: it is a fitting abode for man in regard only to his beatitude. Wherefore he was not placed from the beginning in the empyrean heaven, but was destined to be transferred thither in the state of his final beatitude.

Reply to Objection 2. It is ridiculous to assert that any particular place is natural to the soul or to any spiritual substances, though some particular place may have a certain fitness in regard to spiritual substances. For the earthly paradise was a place adapted to man, as regards both his body and his soul—that is, inasmuch as in his soul was the force which preserved the human body from corruption. This could not be said of the other animals. Therefore, as Damascene says (De Fide Orth. ii, 11): “No irrational animal inhabited paradise”; although, by a certain dispensation, the animals were brought thither by God to Adam; and the serpent was able to trespass therein by the complicity of the devil.

Reply to Objection 3. Paradise did not become useless through being unoccupied by man after sin, just as immortality was not conferred on man in vain, though he was to lose it. For thereby we learn God’s kindness to man, and what man lost by sin. Moreover, some say that Enoch and Elias still dwell in that paradise.

Reply to Objection 4. Those who say that paradise was on the equinoctial line are of opinion that such a

situation is most temperate, on account of the unvarying equality of day and night; that it is never too cold there, because the sun is never too far off; and never too hot, because, although the sun passes over the heads of the inhabitants, it does not remain long in that position. However, Aristotle distinctly says (*Meteor.* ii, 5) that such a region is uninhabitable on account of the heat.

This seems to be more probable; because, even those regions where the sun does not pass vertically overhead, are extremely hot on account of the mere proximity of the sun. But whatever be the truth of the matter, we must hold that paradise was situated in a most temperate situation, whether on the equator or elsewhere.

Whether man was placed in paradise to dress it and keep it?

Ia q. 102 a. 3

Objection 1. It would seem that man was not placed in paradise to dress and keep it. For what was brought on him as a punishment of sin would not have existed in paradise in the state of innocence. But the cultivation of the soil was a punishment of sin (*Gn.* 3:17). Therefore man was not placed in paradise to dress and keep it.

Objection 2. Further, there is no need of a keeper when there is no fear of trespass with violence. But in paradise there was no fear of trespass with violence. Therefore there was no need for man to keep paradise.

Objection 3. Further, if man was placed in paradise to dress and keep it, man would apparently have been made for the sake of paradise, and not contrariwise; which seems to be false. Therefore man was not placed in paradise to dress and keep it.

On the contrary, It is written (*Gn.* 2: 15): “The Lord God took man and placed in the paradise of pleasure, to dress and keep it.”

I answer that, As Augustine says (*Gen.* ad lit. viii, 10), these words in Genesis may be understood in two ways. First, in the sense that God placed man in paradise that He might Himself work in man and keep him, by sanctifying him (for if this work cease, man at once relapses into darkness, as the air grows dark when the light ceases to shine); and by keeping man from all corruption and evil. Secondly, that man might dress and keep paradise, which dressing would not have involved labor, as it did after sin; but would have been pleasant on account of man’s practical knowledge of the powers of nature. Nor would man have kept paradise against a trespasser; but he would have striven to keep paradise for himself lest he should lose it by sin. All of which was for man’s good; wherefore paradise was ordered to man’s benefit, and not conversely.

Whence the Replies to the Objections are made clear.

Whether man was created in paradise?

Ia q. 102 a. 4

Objection 1. It would seem that man was created in paradise. For the angel was created in his dwelling-place—namely, the empyrean heaven. But before sin paradise was a fitting abode for man. Therefore it seems that man was created in paradise.

Objection 2. Further, other animals remain in the place where they are produced, as the fish in the water, and walking animals on the earth from which they were made. Now man would have remained in paradise after he was created (q. 97, a. 4). Therefore he was created in paradise.

Objection 3. Further, woman was made in paradise. But man is greater than woman. Therefore much more should man have been made in paradise.

On the contrary, It is written (*Gn.* 2:15): “God took man and placed him in paradise.”

I answer that, Paradise was a fitting abode for man as regards the incorruptibility of the primitive state.

Now this incorruptibility was man’s, not by nature, but by a supernatural gift of God. Therefore that this might be attributed to God, and not to human nature, God made man outside of paradise, and afterwards placed him there to live there during the whole of his animal life; and, having attained to the spiritual life, to be transferred thence to heaven.

Reply to Objection 1. The empyrean heaven was a fitting abode for the angels as regards their nature, and therefore they were created there.

In the same way I reply to the second objection, for those places befit those animals in their nature.

Reply to Objection 3. Woman was made in paradise, not by reason of her own dignity, but on account of the dignity of the principle from which her body was formed. For the same reason the children would have been born in paradise, where their parents were already.

Objection 1. It would seem that paradise is not a corporeal place. For Bede* says that “paradise reaches to the lunar circle.” But no earthly place answers that description, both because it is contrary to the nature of the earth to be raised up so high, and because beneath the moon is the region of fire, which would consume the earth. Therefore paradise is not a corporeal place.

Objection 2. Further, Scripture mentions four rivers as rising in paradise (Gn. 2:10). But the rivers there mentioned have visible sources elsewhere, as is clear from the Philosopher (Meteor. i). Therefore paradise is not a corporeal place.

Objection 3. Further, although men have explored the entire habitable world, yet none have made mention of the place of paradise. Therefore apparently it is not a corporeal place.

Objection 4. Further, the tree of life is described as growing in paradise. But the tree of life is a spiritual thing, for it is written of Wisdom that “She is a tree of life to them that lay hold on her” (Prov. 3:18). Therefore paradise also is not a corporeal, but a spiritual place.

Objection 5. Further, if paradise be a corporeal place, the trees also of paradise must be corporeal. But it seems they were not; for corporeal trees were produced on the third day, while the planting of the trees of paradise is recorded after the work of the six days. Therefore paradise was not a corporeal place.

On the contrary, Augustine says (Gen. ad lit. viii, 1): “Three general opinions prevail about paradise. Some understand a place merely corporeal; others a place entirely spiritual; while others, whose opinion, I confess, hold that paradise was both corporeal and spiritual.”

I answer that, As Augustine says (De Civ. Dei xiii, 21): “Nothing prevents us from holding, within proper limits, a spiritual paradise; so long as we believe in the truth of the events narrated as having there occurred.” For whatever Scripture tells us about paradise is set down as matter of history; and wherever Scripture makes use of this method, we must hold to the historical truth of the narrative as a foundation of whatever spiritual explanation we may offer. And so paradise, as Isidore says (Etym. xiv, 3), “is a place situated in the east, its name being the Greek for garden.” It was fitting that it should be in the east; for it is to be believed that it was situated in the most excellent part of the earth. Now the east is the right hand on the heavens, as the Philosopher explains (De Coel. ii, 2); and the right hand is nobler than the left: hence it was fitting that God should place the earthly paradise in the east.

Reply to Objection 1. Bede’s assertion is untrue, if taken in its obvious sense. It may, however, be ex-

plained to mean that paradise reaches to the moon, not literally, but figuratively; because, as Isidore says (Etym. xiv, 3), the atmosphere there is “a continually even temperature”; and in this respect it is like the heavenly bodies, which are devoid of opposing elements. Mention, however, is made of the moon rather than of other bodies, because, of all the heavenly bodies, the moon is nearest to us, and is, moreover, the most akin to the earth; hence it is observed to be overshadowed by clouds so as to be almost obscured. Others say that paradise reached to the moon—that is, to the middle space of the air, where rain, and wind, and the like arise; because the moon is said to have influence on such changes. But in this sense it would not be a fit place for human dwelling, through being uneven in temperature, and not attuned to the human temperament, as is the lower atmosphere in the neighborhood of the earth.

Reply to Objection 2. Augustine says (Gen. ad lit. viii, 7): “It is probable that man has no idea where paradise was, and that the rivers, whose sources are said to be known, flowed for some distance underground, and then sprang up elsewhere. For who is not aware that such is the case with some other streams?”

Reply to Objection 3. The situation of paradise is shut off from the habitable world by mountains, or seas, or some torrid region, which cannot be crossed; and so people who have written about topography make no mention of it.

Reply to Objection 4. The tree of life is a material tree, and so called because its fruit was endowed with a life-preserving power as above stated (q. 97, a. 4). Yet it had a spiritual signification; as the rock in the desert was of a material nature, and yet signified Christ. In like manner the tree of the knowledge of good and evil was a material tree, so called in view of future events; because, after eating of it, man was to learn, by experience of the consequent punishment, the difference between the good of obedience and the evil of rebellion. It may also be said to signify spiritually the free-will as some say.

Reply to Objection 5. According to Augustine (Gen. ad lit. v, 5, viii, 3), the plants were not actually produced on the third day, but in their seminal virtues; whereas, after the work of the six days, the plants, both of paradise and others, were actually produced. According to other holy writers, we ought to say that all the plants were actually produced on the third day, including the trees of paradise; and what is said of the trees of paradise being planted after the work of the six days is to be understood, they say, by way of recapitulation. Whence our text reads: “The Lord God had planted a paradise of pleasure from the beginning” (Gn. 2:8).

* Strabus, Gloss on Gn. 2:8

Objection 1. It would seem that paradise was not a place adapted to be the abode of man. For man and angels are similarly ordered to beatitude. But the angels from the very beginning of their existence were made to dwell in the abode of the blessed—that is, the empyrean heaven. Therefore the place of man’s habitation should have been there also.

Objection 2. Further, if some definite place were required for man’s abode, this would be required on the part either of the soul or of the body. If on the part of the soul, the place would be in heaven, which is adapted to the nature of the soul; since the desire of heaven is implanted in all. On the part of the body, there was no need for any other place than the one provided for other animals. Therefore paradise was not at all adapted to be the abode of man.

Objection 3. Further, a place which contains nothing is useless. But after sin, paradise was not occupied by man. Therefore if it were adapted as a dwelling-place for man, it seems that God made paradise to no purpose.

Objection 4. Further, since man is of an even temperament, a fitting place for him should be of even temperature. But paradise was not of an even temperature; for it is said to have been on the equator—a situation of extreme heat, since twice in the year the sun passes vertically over the heads of its inhabitants. Therefore paradise was not a fit dwelling-place for man.

On the contrary, Damascene says (De Fide Orth. ii, 11): “Paradise was a divinely ordered region, and worthy of him who was made to God’s image.”

I answer that, As above stated (q. 97, a. 1), Man was incorruptible and immortal, not because his body had a disposition to incorruptibility, but because in his soul there was a power preserving the body from corruption. Now the human body may be corrupted from within or from without. From within, the body is corrupted by the consumption of the humors, and by old age, as above explained (q. 97, a. 4), and man was able to ward off such corruption by food. Among those things which corrupt the body from without, the chief seems to be an atmosphere of unequal temperature; and to such corruption a remedy is found in an atmosphere of equable nature. In paradise both conditions were found; because, as Damascene says (De Fide Orth. ii, 11): “Paradise was permeated with the all pervading brightness of a temperate, pure, and exquisite atmosphere, and decked with ever-flowering plants.” Whence it is clear that paradise was most fit to be a dwelling-place for man, and in keeping with his original state of immortality.

Reply to Objection 1. The empyrean heaven is the

highest of corporeal places, and is outside the region of change. By the first of these two conditions, it is a fitting abode for the angelic nature: for, as Augustine says (De Trin. ii), “God rules corporeal creatures through spiritual creatures.” Hence it is fitting that the spiritual nature should be established above the entire corporeal nature, as presiding over it. By the second condition, it is a fitting abode for the state of beatitude, which is endowed with the highest degree of stability. Thus the abode of beatitude was suited to the very nature of the angel; therefore he was created there. But it is not suited to man’s nature, since man is not set as a ruler over the entire corporeal creation: it is a fitting abode for man in regard only to his beatitude. Wherefore he was not placed from the beginning in the empyrean heaven, but was destined to be transferred thither in the state of his final beatitude.

Reply to Objection 2. It is ridiculous to assert that any particular place is natural to the soul or to any spiritual substances, though some particular place may have a certain fitness in regard to spiritual substances. For the earthly paradise was a place adapted to man, as regards both his body and his soul—that is, inasmuch as in his soul was the force which preserved the human body from corruption. This could not be said of the other animals. Therefore, as Damascene says (De Fide Orth. ii, 11): “No irrational animal inhabited paradise”; although, by a certain dispensation, the animals were brought thither by God to Adam; and the serpent was able to trespass therein by the complicity of the devil.

Reply to Objection 3. Paradise did not become useless through being unoccupied by man after sin, just as immortality was not conferred on man in vain, though he was to lose it. For thereby we learn God’s kindness to man, and what man lost by sin. Moreover, some say that Enoch and Elias still dwell in that paradise.

Reply to Objection 4. Those who say that paradise was on the equinoctial line are of opinion that such a situation is most temperate, on account of the unvarying equality of day and night; that it is never too cold there, because the sun is never too far off; and never too hot, because, although the sun passes over the heads of the inhabitants, it does not remain long in that position. However, Aristotle distinctly says (Meteor. ii, 5) that such a region is uninhabitable on account of the heat. This seems to be more probable; because, even those regions where the sun does not pass vertically overhead, are extremely hot on account of the mere proximity of the sun. But whatever be the truth of the matter, we must hold that paradise was situated in a most temperate situation, whether on the equator or elsewhere.

Objection 1. It would seem that man was not placed in paradise to dress and keep it. For what was brought on him as a punishment of sin would not have existed in paradise in the state of innocence. But the cultivation of the soil was a punishment of sin (Gn. 3:17). Therefore man was not placed in paradise to dress and keep it.

Objection 2. Further, there is no need of a keeper when there is no fear of trespass with violence. But in paradise there was no fear of trespass with violence. Therefore there was no need for man to keep paradise.

Objection 3. Further, if man was placed in paradise to dress and keep it, man would apparently have been made for the sake of paradise, and not contrariwise; which seems to be false. Therefore man was not placed in paradise to dress and keep it.

On the contrary, It is written (Gn. 2: 15): “The Lord God took man and placed in the paradise of pleasure, to dress and keep it.”

I answer that, As Augustine says (Gen. ad lit. viii, 10), these words in Genesis may be understood in two ways. First, in the sense that God placed man in paradise that He might Himself work in man and keep him, by sanctifying him (for if this work cease, man at once relapses into darkness, as the air grows dark when the light ceases to shine); and by keeping man from all corruption and evil. Secondly, that man might dress and keep paradise, which dressing would not have involved labor, as it did after sin; but would have been pleasant on account of man’s practical knowledge of the powers of nature. Nor would man have kept paradise against a trespasser; but he would have striven to keep paradise for himself lest he should lose it by sin. All of which was for man’s good; wherefore paradise was ordered to man’s benefit, and not conversely.

Whence the Replies to the Objections are made clear.

Objection 1. It would seem that man was created in paradise. For the angel was created in his dwelling-place—namely, the empyrean heaven. But before sin paradise was a fitting abode for man. Therefore it seems that man was created in paradise.

Objection 2. Further, other animals remain in the place where they are produced, as the fish in the water, and walking animals on the earth from which they were made. Now man would have remained in paradise after he was created (q. 97, a. 4). Therefore he was created in paradise.

Objection 3. Further, woman was made in paradise. But man is greater than woman. Therefore much more should man have been made in paradise.

On the contrary, It is written (Gn. 2:15): “God took man and placed him in paradise.”

I answer that, Paradise was a fitting abode for man as regards the incorruptibility of the primitive state.

Now this incorruptibility was man’s, not by nature, but by a supernatural gift of God. Therefore that this might be attributed to God, and not to human nature, God made man outside of paradise, and afterwards placed him there to live there during the whole of his animal life; and, having attained to the spiritual life, to be transferred thence to heaven.

Reply to Objection 1. The empyrean heaven was a fitting abode for the angels as regards their nature, and therefore they were created there.

In the same way I reply to the second objection, for those places befit those animals in their nature.

Reply to Objection 3. Woman was made in paradise, not by reason of her own dignity, but on account of the dignity of the principle from which her body was formed. For the same reason the children would have been born in paradise, where their parents were already.

FIRST PART, QUESTION 103
Of the Government of Things in General
(In Eight Articles)

Having considered the creation of things and their distinction, we now consider in the third place the government thereof, and (1) the government of things in general; (2) in particular, the effects of this government. Under the first head there are eight points of inquiry:

- (1) Whether the world is governed by someone?
- (2) What is the end of this government?
- (3) Whether the world is governed by one?
- (4) Of the effects of this government?
- (5) Whether all things are subject to Divine government?
- (6) Whether all things are immediately governed by God?
- (7) Whether the Divine government is frustrated in anything?
- (8) Whether anything is contrary to the Divine Providence?

Whether the world is governed by anyone?

Ia q. 103 a. 1

Objection 1. It would seem that the world is not governed by anyone. For it belongs to those things to be governed, which move or work for an end. But natural things which make up the greater part of the world do not move, or work for an end; for they have no knowledge of their end. Therefore the world is not governed.

Objection 2. Further, those things are governed which are moved towards an object. But the world does not appear to be so directed, but has stability in itself. Therefore it is not governed.

Objection 3. Further, what is necessarily determined by its own nature to one particular thing, does not require any external principle of government. But the principal parts of the world are by a certain necessity determined to something particular in their actions and movements. Therefore the world does not require to be governed.

On the contrary, It is written (Wis. 14:3): “But Thou, O Father, governest all things by Thy Providence.” And Boethius says (De Consol. iii): “Thou Who governest this universe by mandate eternal.”

I answer that, Certain ancient philosophers denied the government of the world, saying that all things happened by chance. But such an opinion can be refuted as impossible in two ways. First, by observation of things themselves: for we observe that in nature things happen always or nearly always for the best; which would not be the case unless some sort of providence directed nature towards good as an end; which is to govern. Wherefore the unfailling order we observe in things is a sign of their being governed; for instance, if we enter a well-ordered house we gather therefrom the intention of him that put it in order, as Tullius says (De Nat. Deorum ii), quoting Aristotle*. Secondly, this is clear from a consideration of Divine goodness, which, as we have said above (q. 44, a. 4; q. 65, a. 2), was the cause of the production of things in existence. For as “it belongs

to the best to produce the best,” it is not fitting that the supreme goodness of God should produce things without giving them their perfection. Now a thing’s ultimate perfection consists in the attainment of its end. Therefore it belongs to the Divine goodness, as it brought things into existence, so to lead them to their end: and this is to govern.

Reply to Objection 1. A thing moves or operates for an end in two ways. First, in moving itself to the end, as man and other rational creatures; and such things have knowledge of their end, and of the means to the end. Secondly, a thing is said to move or operate for an end, as though moved or directed by another thereto, as an arrow directed to the target by the archer, who knows the end unknown to the arrow. Wherefore, as the movement of the arrow towards a definite end shows clearly that it is directed by someone with knowledge, so the unvarying course of natural things which are without knowledge, shows clearly that the world is governed by some reason.

Reply to Objection 2. In all created things there is a stable element, at least primary matter; and something belonging to movement, if under movement we include operation. And things need governing as to both: because even that which is stable, since it is created from nothing, would return to nothingness were it not sustained by a governing hand, as will be explained later (q. 104, a. 1).

Reply to Objection 3. The natural necessity inherent in those beings which are determined to a particular thing, is a kind of impression from God, directing them to their end; as the necessity whereby an arrow is moved so as to fly towards a certain point is an impression from the archer, and not from the arrow. But there is a difference, inasmuch as that which creatures receive from God is their nature, while that which natural things receive from man in addition to their nature

* Cleanthes

is somewhat violent. Wherefore, as the violent necessity in the movement of the arrow shows the action of

the archer, so the natural necessity of things shows the government of Divine Providence.

Whether the end of the government of the world is something outside the world?

Ia q. 103 a. 2

Objection 1. It would seem that the end of the government of the world is not something existing outside the world. For the end of the government of a thing is that whereto the thing governed is brought. But that whereto a thing is brought is some good in the thing itself; thus a sick man is brought back to health, which is something good in him. Therefore the end of government of things is some good not outside, but within the things themselves.

Objection 2. Further, the Philosopher says (*Ethic.* i, 1): “Some ends are an operation; some are a work”—i.e. produced by an operation. But nothing can be produced by the whole universe outside itself; and operation exists in the agent. Therefore nothing extrinsic can be the end of the government of things.

Objection 3. Further, the good of the multitude seems to consist in order, and peace which is the “tranquillity of order,” as Augustine says (*De Civ. Dei* xix, 13). But the world is composed of a multitude of things. Therefore the end of the government of the world is the peaceful order in things themselves. Therefore the end of the government of the world is not an extrinsic good.

On the contrary, It is written (*Prov.* 16:4): “The Lord hath made all things for Himself.” But God is outside the entire order of the universe. Therefore the end of all things is something extrinsic to them.

I answer that, As the end of a thing corresponds to its beginning, it is not possible to be ignorant of the end of things if we know their beginning. Therefore, since the beginning of all things is something outside the universe, namely, God, it is clear from what has been expounded above (q. 44, Aa. 1,2), that we must conclude that the end of all things is some extrinsic good. This can be proved by reason. For it is clear that good has the nature of an end; wherefore, a particular end of anything consists in some particular good; while the universal end of all things is the Universal Good; Which

is good of Itself by virtue of Its Essence, Which is the very essence of goodness; whereas a particular good is good by participation. Now it is manifest that in the whole created universe there is not a good which is not such by participation. Wherefore that good which is the end of the whole universe must be a good outside the universe.

Reply to Objection 1. We may acquire some good in many ways: first, as a form existing in us, such as health or knowledge; secondly, as something done by us, as a builder attains his end by building a house; thirdly, as something good possessed or acquired by us, as the buyer of a field attains his end when he enters into possession. Wherefore nothing prevents something outside the universe being the good to which it is directed.

Reply to Objection 2. The Philosopher is speaking of the ends of various arts; for the end of some arts consists in the operation itself, as the end of a harpist is to play the harp; whereas the end of other arts consists in something produced, as the end of a builder is not the act of building, but the house he builds. Now it may happen that something extrinsic is the end not only as made, but also as possessed or acquired or even as represented, as if we were to say that Hercules is the end of the statue made to represent him. Therefore we may say that some good outside the whole universe is the end of the government of the universe, as something possessed and represented; for each thing tends to a participation thereof, and to an assimilation thereto, as far as is possible.

Reply to Objection 3. A good existing in the universe, namely, the order of the universe, is an end thereof; this, however, is not its ultimate end, but is ordered to the extrinsic good as to the end: thus the order in an army is ordered to the general, as stated in *Metaph.* xii, *Did.* xi, 10.

Whether the world is governed by one?

Ia q. 103 a. 3

Objection 1. It would seem that the world is not governed by one. For we judge the cause by the effect. Now, we see in the government of the universe that things are not moved and do not operate uniformly, but some contingently and some of necessity in variously different ways. Therefore the world is not governed by one.

Objection 2. Further, things which are governed by one do not act against each other, except by the incapacity or unskillfulness of the ruler; which cannot apply to God. But created things agree not together, and act against each other; as is evident in the case of contraries.

Therefore the world is not governed by one.

Objection 3. Further, in nature we always find what is the better. But it “is better that two should be together than one” (*Eccles.* 4:9). Therefore the world is not governed by one, but by many.

On the contrary, We confess our belief in one God and one Lord, according to the words of the Apostle (1 *Cor.* 8:6): “To us there is but one God, the Father. . . and one Lord”: and both of these pertain to government. For to the Lord belongs dominion over subjects; and the name of God is taken from Providence as stated above (q. 13, a. 8). Therefore the world is governed by one.

I answer that, We must of necessity say that the world is governed by one. For since the end of the government of the world is that which is essentially good, which is the greatest good; the government of the world must be the best kind of government. Now the best government is the government by one. The reason of this is that government is nothing but the directing of the things governed to the end; which consists in some good. But unity belongs to the idea of goodness, as Boethius proves (*De Consol.* iii, 11) from this, that, as all things desire good, so do they desire unity; without which they would cease to exist. For a thing so far exists as it is one. Whence we observe that things resist division, as far as they can; and the dissolution of a thing arises from defect therein. Therefore the intention of a ruler over a multitude is unity, or peace. Now the proper cause of unity is one. For it is clear that several cannot be the cause of unity or concord, except so far as they are united. Furthermore, what is one in itself is a more apt and a better cause of unity than several things united.

Therefore a multitude is better governed by one than by several. From this it follows that the government of the world, being the best form of government, must be by one. This is expressed by the Philosopher (*Metaph.* xii, *Did.* xi, 10): “Things refuse to be ill governed; and multiplicity of authorities is a bad thing, therefore there should be one ruler.”

Reply to Objection 1. Movement is “the act of a thing moved, caused by the mover.” Wherefore dissimilarity of movements is caused by diversity of things moved, which diversity is essential to the perfection of the universe (q. 47, Aa. 1,2; q. 48, a. 2), and not by a diversity of governors.

Reply to Objection 2. Although contraries do not agree with each other in their proximate ends, nevertheless they agree in the ultimate end, so far as they are included in the one order of the universe.

Reply to Objection 3. If we consider individual goods, then two are better than one. But if we consider the essential good, then no addition is possible.

Whether the effect of government is one or many?

Ia q. 103 a. 4

Objection 1. It would seem that there is but one effect of the government of the world and not many. For the effect of government is that which is caused in the things governed. This is one, namely, the good which consists in order; as may be seen in the example of an army. Therefore the government of the world has but one effect.

Objection 2. Further, from one there naturally proceeds but one. But the world is governed by one as we have proved (a. 3). Therefore also the effect of this government is but one.

Objection 3. Further, if the effect of government is not one by reason of the unity of the Governor, it must be many by reason of the many things governed. But these are too numerous to be counted. Therefore we cannot assign any definite number to the effects of government.

On the contrary, Dionysius says (*Div. Nom.* xii): “God contains all and fills all by His providence and perfect goodness.” But government belongs to providence. Therefore there are certain definite effects of the Divine government.

I answer that, The effect of any action may be judged from its end; because it is by action that the attainment of the end is effected. Now the end of the government of the world is the essential good, to the partic-

ipation and similarity of which all things tend. Consequently the effect of the government of the world may be taken in three ways. First, on the part of the end itself; and in this way there is but one effect, that is, assimilation to the supreme good. Secondly, the effect of the government of the world may be considered on the part of those things by means of which the creature is made like to God. Thus there are, in general, two effects of the government. For the creature is assimilated to God in two things; first, with regard to this, that God is good; and so the creature becomes like Him by being good; and secondly, with regard to this, that God is the cause of goodness in others; and so the creature becomes like God by moving others to be good. Wherefore there are two effects of government, the preservation of things in their goodness, and the moving of things to good. Thirdly, we may consider in the individual the effects of the government of the world; and in this way they are without number.

Reply to Objection 1. The order of the universe includes both the preservation of things created by God and their movement. As regards these two things we find order among them, inasmuch as one is better than another; and one is moved by another.

From what has been said above, we can gather the replies to the other two objections.

Whether all things are subject to the Divine government?

Ia q. 103 a. 5

Objection 1. It would seem that not all things are subject to the Divine government. For it is written (*Eccles.* 9:11): “I saw that under the sun the race is not to the swift, nor the battle to the strong, nor bread to the

wise, nor riches to the learned, nor favor to the skillful, but time and chance in all.” But things subject to the Divine government are not ruled by chance. Therefore those things which are under the sun are not subject to

the Divine government.

Objection 2. Further, the Apostle says (1 Cor. 9:9): “God hath no care for oxen.” But he that governs has care for the things he governs. Therefore all things are not subject to the Divine government.

Objection 3. Further, what can govern itself needs not to be governed by another. But the rational creature can govern itself; since it is master of its own act, and acts of itself; and is not made to act by another, which seems proper to things which are governed. Therefore all things are not subject to the Divine government.

On the contrary, Augustine says (De Civ. Dei, v, 11): “Not only heaven and earth, not only man and angel, even the bowels of the lowest animal, even the wing of the bird, the flower of the plant, the leaf of the tree, hath God endowed with every fitting detail of their nature.” Therefore all things are subject to His government.

I answer that, For the same reason is God the ruler of things as He is their cause, because the same gives existence as gives perfection; and this belongs to government. Now God is the cause not indeed only of some particular kind of being, but of the whole universal being, as proved above (q. 44, Aa. 1,2). Wherefore, as there can be nothing which is not created by God, so there can be nothing which is not subject to His government. This can also be proved from the nature of the end of government. For a man’s government extends over all those things which come under the end of his government. Now the end of the Divine government is the Divine goodness; as we have shown (a. 2). Wherefore, as there can be nothing that is not ordered to the Divine goodness as its end, as is clear from what we have said above (q. 44, a. 4; q. 65, a. 2), so it is impossible for anything to escape from the Divine government.

Foolish therefore was the opinion of those who said that the corruptible lower world, or individual things, or that even human affairs, were not subject to the Divine government. These are represented as saying, “God hath abandoned the earth” (Ezech. 9:9).

Reply to Objection 1. These things are said to be under the sun which are generated and corrupted ac-

ording to the sun’s movement. In all such things we find chance: not that everything is casual which occurs in such things; but that in each one there is an element of chance. And the very fact that an element of chance is found in those things proves that they are subject to government of some kind. For unless corruptible things were governed by a higher being, they would tend to nothing definite, especially those which possess no kind of knowledge. So nothing would happen unintentionally; which constitutes the nature of chance. Wherefore to show how things happen by chance and yet according to the ordering of a higher cause, he does not say absolutely that he observes chance in all things, but “time and chance,” that is to say, that defects may be found in these things according to some order of time.

Reply to Objection 2. Government implies a certain change effected by the governor in the things governed. Now every movement is the act of a movable thing, caused by the moving principle, as is laid down Phys. iii, 3. And every act is proportionate to that of which it is an act. Consequently, various movable things must be moved variously, even as regards movement by one and the same mover. Thus by the one art of the Divine governor, various things are variously governed according to their variety. Some, according to their nature, act of themselves, having dominion over their actions; and these are governed by God, not only in this, that they are moved by God Himself, Who works in them interiorly; but also in this, that they are induced by Him to do good and to fly from evil, by precepts and prohibitions, rewards and punishments. But irrational creatures which do not act but are acted upon, are not thus governed by God. Hence, when the Apostle says that “God hath no care for oxen,” he does not wholly withdraw them from the Divine government, but only as regards the way in which rational creatures are governed.

Reply to Objection 3. The rational creature governs itself by its intellect and will, both of which require to be governed and perfected by the Divine intellect and will. Therefore above the government whereby the rational creature governs itself as master of its own act, it requires to be governed by God.

Whether all things are immediately governed by God?

Ia q. 103 a. 6

Objection 1. It would seem that all things are governed by God immediately. For Gregory of Nyssa (Nemesius, De Nat. Hom.) reproves the opinion of Plato who divides providence into three parts. The first he ascribes to the supreme god, who watches over heavenly things and all universals; the second providence he attributes to the secondary deities, who go the round of the heavens to watch over generation and corruption; while he ascribes a third providence to certain spirits who are guardians on earth of human actions. Therefore it seems that all things are immediately governed by God.

Objection 2. Further, it is better that a thing be done by one, if possible, than by many, as the Philosopher says (Phys. viii, 6). But God can by Himself govern all things without any intermediary cause. Therefore it seems that He governs all things immediately.

Objection 3. Further, in God nothing is defective or imperfect. But it seems to be imperfect in a ruler to govern by means of others; thus an earthly king, by reason of his not being able to do everything himself, and because he cannot be everywhere at the same time, requires to govern by means of ministers. Therefore God governs all things immediately.

On the contrary, Augustine says (De Trin. iii, 4): “As the lower and grosser bodies are ruled in a certain orderly way by bodies of greater subtlety and power; so all bodies are ruled by the rational spirit of life; and the sinful and unfaithful spirit is ruled by the good and just spirit of life; and this spirit by God Himself.”

I answer that, In government there are two things to be considered; the design of government, which is providence itself; and the execution of the design. As to the design of government, God governs all things immediately; whereas in its execution, He governs some things by means of others.

The reason of this is that as God is the very essence of goodness, so everything must be attributed to God in its highest degree of goodness. Now the highest degree of goodness in any practical order, design or knowledge (and such is the design of government) consists in knowing the individuals acted upon; as the best physician is not the one who can only give his attention to general principles, but who can consider the least details; and so on in other things. Therefore we must say that God has the design of the government of all things, even of the very least.

But since things which are governed should be

brought to perfection by government, this government will be so much the better in the degree the things governed are brought to perfection. Now it is a greater perfection for a thing to be good in itself and also the cause of goodness in others, than only to be good in itself. Therefore God so governs things that He makes some of them to be causes of others in government; as a master, who not only imparts knowledge to his pupils, but gives also the faculty of teaching others.

Reply to Objection 1. Plato’s opinion is to be rejected, because he held that God did not govern all things immediately, even in the design of government; this is clear from the fact that he divided providence, which is the design of government, into three parts.

Reply to Objection 2. If God governed alone, things would be deprived of the perfection of causality. Wherefore all that is effected by many would not be accomplished by one.

Reply to Objection 3. That an earthly king should have ministers to execute his laws is a sign not only of his being imperfect, but also of his dignity; because by the ordering of ministers the kingly power is brought into greater evidence.

Whether anything can happen outside the order of the Divine government?

Ia q. 103 a. 7

Objection 1. It would seem possible that something may occur outside the order of the Divine government. For Boethius says (De Consol. iii) that “God disposes all for good.” Therefore, if nothing happens outside the order of the Divine government, it would follow that no evil exists.

Objection 2. Further, nothing that is in accordance with the pre-ordination of a ruler occurs by chance. Therefore, if nothing occurs outside the order of the Divine government, it follows that there is nothing fortuitous and casual.

Objection 3. Further, the order of Divine Providence is certain and unchangeable; because it is in accordance with the eternal design. Therefore, if nothing happens outside the order of the Divine government, it follows that all things happen by necessity, and nothing is contingent; which is false. Therefore it is possible for something to occur outside the order of the Divine government.

On the contrary, It is written (Esther 13:9): “O Lord, Lord, almighty King, all things are in Thy power, and there is none that can resist Thy will.”

I answer that, It is possible for an effect to result outside the order of some particular cause; but not outside the order of the universal cause. The reason of this is that no effect results outside the order of a particular cause, except through some other impeding cause; which other cause must itself be reduced to the first universal cause; as indigestion may occur outside the order of the nutritive power by some such impediment as the

coarseness of the food, which again is to be ascribed to some other cause, and so on till we come to the first universal cause. Therefore as God is the first universal cause, not of one genus only, but of all being in general, it is impossible for anything to occur outside the order of the Divine government; but from the very fact that from one point of view something seems to evade the order of Divine providence considered in regard to one particular cause, it must necessarily come back to that order as regards some other cause.

Reply to Objection 1. There is nothing wholly evil in the world, for evil is ever founded on good, as shown above (q. 48, a. 3). Therefore something is said to be evil through its escaping from the order of some particular good. If it wholly escaped from the order of the Divine government, it would wholly cease to exist.

Reply to Objection 2. Things are said to be fortuitous as regards some particular cause from the order of which they escape. But as to the order of Divine providence, “nothing in the world happens by chance,” as Augustine declares (QQ. 83, qu. 24).

Reply to Objection 3. Certain effects are said to be contingent as compared to their proximate causes, which may fail in their effects; and not as though anything could happen entirely outside the order of Divine government. The very fact that something occurs outside the order of some proximate cause, is owing to some other cause, itself subject to the Divine government.

Objection 1. It would seem possible that some resistance can be made to the order of the Divine government. For it is written (Is. 3:8): “Their tongue and their devices are against the Lord.”

Objection 2. Further, a king does not justly punish those who do not rebel against his commands. Therefore if no one rebelled against God’s commands, no one would be justly punished by God.

Objection 3. Further, everything is subject to the order of the Divine government. But some things oppose others. Therefore some things rebel against the order of the Divine government.

On the contrary, Boethius says (De Consol. iii): “There is nothing that can desire or is able to resist this sovereign good. It is this sovereign good therefore that ruleth all mightily and ordereth all sweetly,” as is said (Wis. 8) of Divine wisdom.

I answer that, We may consider the order of Divine providence in two ways: in general, inasmuch as it proceeds from the governing cause of all; and in particular, inasmuch as it proceeds from some particular cause which executes the order of the Divine government.

Considered in the first way, nothing can resist the order of the Divine government. This can be proved in two ways: firstly from the fact that the order of the

Divine government is wholly directed to good, and everything by its own operation and effort tends to good only, “for no one acts intending evil,” as Dionysius says (Div. Nom. iv): secondly from the fact that, as we have said above (a. 1, ad 3; a. 5, ad 2), every inclination of anything, whether natural or voluntary, is nothing but a kind of impression from the first mover; as the inclination of the arrow towards a fixed point is nothing but an impulse received from the archer. Wherefore every agent, whether natural or free, attains to its divinely appointed end, as though of its own accord. For this reason God is said “to order all things sweetly.”

Reply to Objection 1. Some are said to think or speak, or act against God: not that they entirely resist the order of the Divine government; for even the sinner intends the attainment of a certain good: but because they resist some particular good, which belongs to their nature or state. Therefore they are justly punished by God.

Reply obj. 2 is clear from the above.

Reply to Objection 3. From the fact that one thing opposes another, it follows that some one thing can resist the order of a particular cause; but not that order which depends on the universal cause of all things.

Objection 1. It would seem that the world is not governed by anyone. For it belongs to those things to be governed, which move or work for an end. But natural things which make up the greater part of the world do not move, or work for an end; for they have no knowledge of their end. Therefore the world is not governed.

Objection 2. Further, those things are governed which are moved towards an object. But the world does not appear to be so directed, but has stability in itself. Therefore it is not governed.

Objection 3. Further, what is necessarily determined by its own nature to one particular thing, does not require any external principle of government. But the principal parts of the world are by a certain necessity determined to something particular in their actions and movements. Therefore the world does not require to be governed.

On the contrary, It is written (Wis. 14:3): “But Thou, O Father, governest all things by Thy Providence.” And Boethius says (De Consol. iii): “Thou Who governest this universe by mandate eternal.”

I answer that, Certain ancient philosophers denied the government of the world, saying that all things happened by chance. But such an opinion can be refuted as impossible in two ways. First, by observation of things themselves: for we observe that in nature things happen always or nearly always for the best; which would not be the case unless some sort of providence directed nature towards good as an end; which is to govern. Wherefore the unfailling order we observe in things is a sign of their being governed; for instance, if we enter a well-ordered house we gather therefrom the intention of him that put it in order, as Tullius says (De Nat. Deorum ii), quoting Aristotle*. Secondly, this is clear from a consideration of Divine goodness, which, as we have said above (q. 44, a. 4; q. 65, a. 2), was the cause of the production of things in existence. For as “it belongs to the best to produce the best,” it is not fitting that the supreme goodness of God should produce things with-

out giving them their perfection. Now a thing’s ultimate perfection consists in the attainment of its end. Therefore it belongs to the Divine goodness, as it brought things into existence, so to lead them to their end: and this is to govern.

Reply to Objection 1. A thing moves or operates for an end in two ways. First, in moving itself to the end, as man and other rational creatures; and such things have knowledge of their end, and of the means to the end. Secondly, a thing is said to move or operate for an end, as though moved or directed by another thereto, as an arrow directed to the target by the archer, who knows the end unknown to the arrow. Wherefore, as the movement of the arrow towards a definite end shows clearly that it is directed by someone with knowledge, so the unvarying course of natural things which are without knowledge, shows clearly that the world is governed by some reason.

Reply to Objection 2. In all created things there is a stable element, at least primary matter; and something belonging to movement, if under movement we include operation. And things need governing as to both: because even that which is stable, since it is created from nothing, would return to nothingness were it not sustained by a governing hand, as will be explained later (q. 104, a. 1).

Reply to Objection 3. The natural necessity inherent in those beings which are determined to a particular thing, is a kind of impression from God, directing them to their end; as the necessity whereby an arrow is moved so as to fly towards a certain point is an impression from the archer, and not from the arrow. But there is a difference, inasmuch as that which creatures receive from God is their nature, while that which natural things receive from man in addition to their nature is somewhat violent. Wherefore, as the violent necessity in the movement of the arrow shows the action of the archer, so the natural necessity of things shows the government of Divine Providence.

* Cleanthes

Objection 1. It would seem that the end of the government of the world is not something existing outside the world. For the end of the government of a thing is that whereto the thing governed is brought. But that whereto a thing is brought is some good in the thing itself; thus a sick man is brought back to health, which is something good in him. Therefore the end of government of things is some good not outside, but within the things themselves.

Objection 2. Further, the Philosopher says (*Ethic. i, 1*): “Some ends are an operation; some are a work”—i.e. produced by an operation. But nothing can be produced by the whole universe outside itself; and operation exists in the agent. Therefore nothing extrinsic can be the end of the government of things.

Objection 3. Further, the good of the multitude seems to consist in order, and peace which is the “tranquillity of order,” as Augustine says (*De Civ. Dei xix, 13*). But the world is composed of a multitude of things. Therefore the end of the government of the world is the peaceful order in things themselves. Therefore the end of the government of the world is not an extrinsic good.

On the contrary, It is written (*Prov. 16:4*): “The Lord hath made all things for Himself.” But God is outside the entire order of the universe. Therefore the end of all things is something extrinsic to them.

I answer that, As the end of a thing corresponds to its beginning, it is not possible to be ignorant of the end of things if we know their beginning. Therefore, since the beginning of all things is something outside the universe, namely, God, it is clear from what has been expounded above (q. 44, Aa. 1,2), that we must conclude that the end of all things is some extrinsic good. This can be proved by reason. For it is clear that good has the nature of an end; wherefore, a particular end of anything consists in some particular good; while the universal end of all things is the Universal Good; Which

is good of Itself by virtue of Its Essence, Which is the very essence of goodness; whereas a particular good is good by participation. Now it is manifest that in the whole created universe there is not a good which is not such by participation. Wherefore that good which is the end of the whole universe must be a good outside the universe.

Reply to Objection 1. We may acquire some good in many ways: first, as a form existing in us, such as health or knowledge; secondly, as something done by us, as a builder attains his end by building a house; thirdly, as something good possessed or acquired by us, as the buyer of a field attains his end when he enters into possession. Wherefore nothing prevents something outside the universe being the good to which it is directed.

Reply to Objection 2. The Philosopher is speaking of the ends of various arts; for the end of some arts consists in the operation itself, as the end of a harpist is to play the harp; whereas the end of other arts consists in something produced, as the end of a builder is not the act of building, but the house he builds. Now it may happen that something extrinsic is the end not only as made, but also as possessed or acquired or even as represented, as if we were to say that Hercules is the end of the statue made to represent him. Therefore we may say that some good outside the whole universe is the end of the government of the universe, as something possessed and represented; for each thing tends to a participation thereof, and to an assimilation thereto, as far as is possible.

Reply to Objection 3. A good existing in the universe, namely, the order of the universe, is an end thereof; this, however, is not its ultimate end, but is ordered to the extrinsic good as to the end: thus the order in an army is ordered to the general, as stated in *Metaph. xii, Did. xi, 10*.

Objection 1. It would seem that the world is not governed by one. For we judge the cause by the effect. Now, we see in the government of the universe that things are not moved and do not operate uniformly, but some contingently and some of necessity in variously different ways. Therefore the world is not governed by one.

Objection 2. Further, things which are governed by one do not act against each other, except by the incapacity or unskillfulness of the ruler; which cannot apply to God. But created things agree not together, and act against each other; as is evident in the case of contraries. Therefore the world is not governed by one.

Objection 3. Further, in nature we always find what is the better. But it “is better that two should be together than one” (Eccles. 4:9). Therefore the world is not governed by one, but by many.

On the contrary, We confess our belief in one God and one Lord, according to the words of the Apostle (1 Cor. 8:6): “To us there is but one God, the Father. . . and one Lord”: and both of these pertain to government. For to the Lord belongs dominion over subjects; and the name of God is taken from Providence as stated above (q. 13, a. 8). Therefore the world is governed by one.

I answer that, We must of necessity say that the world is governed by one. For since the end of the government of the world is that which is essentially good, which is the greatest good; the government of the world must be the best kind of government. Now the best government is the government by one. The reason of this is that government is nothing but the directing of the things governed to the end; which consists in some

good. But unity belongs to the idea of goodness, as Boethius proves (De Consol. iii, 11) from this, that, as all things desire good, so do they desire unity; without which they would cease to exist. For a thing so far exists as it is one. Whence we observe that things resist division, as far as they can; and the dissolution of a thing arises from defect therein. Therefore the intention of a ruler over a multitude is unity, or peace. Now the proper cause of unity is one. For it is clear that several cannot be the cause of unity or concord, except so far as they are united. Furthermore, what is one in itself is a more apt and a better cause of unity than several things united. Therefore a multitude is better governed by one than by several. From this it follows that the government of the world, being the best form of government, must be by one. This is expressed by the Philosopher (Metaph. xii, Did. xi, 10): “Things refuse to be ill governed; and multiplicity of authorities is a bad thing, therefore there should be one ruler.”

Reply to Objection 1. Movement is “the act of a thing moved, caused by the mover.” Wherefore dissimilarity of movements is caused by diversity of things moved, which diversity is essential to the perfection of the universe (q. 47, Aa. 1,2; q. 48, a. 2), and not by a diversity of governors.

Reply to Objection 2. Although contraries do not agree with each other in their proximate ends, nevertheless they agree in the ultimate end, so far as they are included in the one order of the universe.

Reply to Objection 3. If we consider individual goods, then two are better than one. But if we consider the essential good, then no addition is possible.

Objection 1. It would seem that there is but one effect of the government of the world and not many. For the effect of government is that which is caused in the things governed. This is one, namely, the good which consists in order; as may be seen in the example of an army. Therefore the government of the world has but one effect.

Objection 2. Further, from one there naturally proceeds but one. But the world is governed by one as we have proved (a. 3). Therefore also the effect of this government is but one.

Objection 3. Further, if the effect of government is not one by reason of the unity of the Governor, it must be many by reason of the many things governed. But these are too numerous to be counted. Therefore we cannot assign any definite number to the effects of government.

On the contrary, Dionysius says (Div. Nom. xii): “God contains all and fills all by His providence and perfect goodness.” But government belongs to providence. Therefore there are certain definite effects of the Divine government.

I answer that, The effect of any action may be judged from its end; because it is by action that the attainment of the end is effected. Now the end of the government of the world is the essential good, to the partic-

ipation and similarity of which all things tend. Consequently the effect of the government of the world may be taken in three ways. First, on the part of the end itself; and in this way there is but one effect, that is, assimilation to the supreme good. Secondly, the effect of the government of the world may be considered on the part of those things by means of which the creature is made like to God. Thus there are, in general, two effects of the government. For the creature is assimilated to God in two things; first, with regard to this, that God is good; and so the creature becomes like Him by being good; and secondly, with regard to this, that God is the cause of goodness in others; and so the creature becomes like God by moving others to be good. Wherefore there are two effects of government, the preservation of things in their goodness, and the moving of things to good. Thirdly, we may consider in the individual the effects of the government of the world; and in this way they are without number.

Reply to Objection 1. The order of the universe includes both the preservation of things created by God and their movement. As regards these two things we find order among them, inasmuch as one is better than another; and one is moved by another.

From what has been said above, we can gather the replies to the other two objections.

Objection 1. It would seem that not all things are subject to the Divine government. For it is written (Eccles. 9:11): “I saw that under the sun the race is not to the swift, nor the battle to the strong, nor bread to the wise, nor riches to the learned, nor favor to the skillful, but time and chance in all.” But things subject to the Divine government are not ruled by chance. Therefore those things which are under the sun are not subject to the Divine government.

Objection 2. Further, the Apostle says (1 Cor. 9:9): “God hath no care for oxen.” But he that governs has care for the things he governs. Therefore all things are not subject to the Divine government.

Objection 3. Further, what can govern itself needs not to be governed by another. But the rational creature can govern itself; since it is master of its own act, and acts of itself; and is not made to act by another, which seems proper to things which are governed. Therefore all things are not subject to the Divine government.

On the contrary, Augustine says (De Civ. Dei v, 11): “Not only heaven and earth, not only man and angel, even the bowels of the lowest animal, even the wing of the bird, the flower of the plant, the leaf of the tree, hath God endowed with every fitting detail of their nature.” Therefore all things are subject to His government.

I answer that, For the same reason is God the ruler of things as He is their cause, because the same gives existence as gives perfection; and this belongs to government. Now God is the cause not indeed only of some particular kind of being, but of the whole universal being, as proved above (q. 44, Aa. 1,2). Wherefore, as there can be nothing which is not created by God, so there can be nothing which is not subject to His government. This can also be proved from the nature of the end of government. For a man’s government extends over all those things which come under the end of his government. Now the end of the Divine government is the Divine goodness; as we have shown (a. 2). Wherefore, as there can be nothing that is not ordered to the Divine goodness as its end, as is clear from what we have said above (q. 44, a. 4; q. 65, a. 2), so it is impossible for anything to escape from the Divine government.

Foolish therefore was the opinion of those who said that the corruptible lower world, or individual things, or that even human affairs, were not subject to the Divine

government. These are represented as saying, “God hath abandoned the earth” (Ezech. 9:9).

Reply to Objection 1. These things are said to be under the sun which are generated and corrupted according to the sun’s movement. In all such things we find chance: not that everything is casual which occurs in such things; but that in each one there is an element of chance. And the very fact that an element of chance is found in those things proves that they are subject to government of some kind. For unless corruptible things were governed by a higher being, they would tend to nothing definite, especially those which possess no kind of knowledge. So nothing would happen unintentionally; which constitutes the nature of chance. Wherefore to show how things happen by chance and yet according to the ordering of a higher cause, he does not say absolutely that he observes chance in all things, but “time and chance,” that is to say, that defects may be found in these things according to some order of time.

Reply to Objection 2. Government implies a certain change effected by the governor in the things governed. Now every movement is the act of a movable thing, caused by the moving principle, as is laid down Phys. iii, 3. And every act is proportionate to that of which it is an act. Consequently, various movable things must be moved variously, even as regards movement by one and the same mover. Thus by the one art of the Divine governor, various things are variously governed according to their variety. Some, according to their nature, act of themselves, having dominion over their actions; and these are governed by God, not only in this, that they are moved by God Himself, Who works in them interiorly; but also in this, that they are induced by Him to do good and to fly from evil, by precepts and prohibitions, rewards and punishments. But irrational creatures which do not act but are acted upon, are not thus governed by God. Hence, when the Apostle says that “God hath no care for oxen,” he does not wholly withdraw them from the Divine government, but only as regards the way in which rational creatures are governed.

Reply to Objection 3. The rational creature governs itself by its intellect and will, both of which require to be governed and perfected by the Divine intellect and will. Therefore above the government whereby the rational creature governs itself as master of its own act, it requires to be governed by God.

Objection 1. It would seem that all things are governed by God immediately. For Gregory of Nyssa (Nemesius, *De Nat. Hom.*) reproves the opinion of Plato who divides providence into three parts. The first he ascribes to the supreme god, who watches over heavenly things and all universals; the second providence he attributes to the secondary deities, who go the round of the heavens to watch over generation and corruption; while he ascribes a third providence to certain spirits who are guardians on earth of human actions. Therefore it seems that all things are immediately governed by God.

Objection 2. Further, it is better that a thing be done by one, if possible, than by many, as the Philosopher says (*Phys.* viii, 6). But God can by Himself govern all things without any intermediary cause. Therefore it seems that He governs all things immediately.

Objection 3. Further, in God nothing is defective or imperfect. But it seems to be imperfect in a ruler to govern by means of others; thus an earthly king, by reason of his not being able to do everything himself, and because he cannot be everywhere at the same time, requires to govern by means of ministers. Therefore God governs all things immediately.

On the contrary, Augustine says (*De Trin.* iii, 4): “As the lower and grosser bodies are ruled in a certain orderly way by bodies of greater subtlety and power; so all bodies are ruled by the rational spirit of life; and the sinful and unfaithful spirit is ruled by the good and just spirit of life; and this spirit by God Himself.”

I answer that, In government there are two things to be considered; the design of government, which is providence itself; and the execution of the design. As to the design of government, God governs all things immediately; whereas in its execution, He governs some things by means of others.

The reason of this is that as God is the very essence of goodness, so everything must be attributed to God in its highest degree of goodness. Now the highest degree of goodness in any practical order, design or knowledge (and such is the design of government) consists in knowing the individuals acted upon; as the best physician is not the one who can only give his attention to general principles, but who can consider the least details; and so on in other things. Therefore we must say that God has the design of the government of all things, even of the very least.

But since things which are governed should be brought to perfection by government, this government will be so much the better in the degree the things governed are brought to perfection. Now it is a greater perfection for a thing to be good in itself and also the cause of goodness in others, than only to be good in itself. Therefore God so governs things that He makes some of them to be causes of others in government; as a master, who not only imparts knowledge to his pupils, but gives also the faculty of teaching others.

Reply to Objection 1. Plato’s opinion is to be rejected, because he held that God did not govern all things immediately, even in the design of government; this is clear from the fact that he divided providence, which is the design of government, into three parts.

Reply to Objection 2. If God governed alone, things would be deprived of the perfection of causality. Wherefore all that is effected by many would not be accomplished by one.

Reply to Objection 3. That an earthly king should have ministers to execute his laws is a sign not only of his being imperfect, but also of his dignity; because by the ordering of ministers the kingly power is brought into greater evidence.

Objection 1. It would seem possible that something may occur outside the order of the Divine government. For Boethius says (De Consol. iii) that “God disposes all for good.” Therefore, if nothing happens outside the order of the Divine government, it would follow that no evil exists.

Objection 2. Further, nothing that is in accordance with the pre-ordination of a ruler occurs by chance. Therefore, if nothing occurs outside the order of the Divine government, it follows that there is nothing fortuitous and casual.

Objection 3. Further, the order of Divine Providence is certain and unchangeable; because it is in accordance with the eternal design. Therefore, if nothing happens outside the order of the Divine government, it follows that all things happen by necessity, and nothing is contingent; which is false. Therefore it is possible for something to occur outside the order of the Divine government.

On the contrary, It is written (Esther 13:9): “O Lord, Lord, almighty King, all things are in Thy power, and there is none that can resist Thy will.”

I answer that, It is possible for an effect to result outside the order of some particular cause; but not outside the order of the universal cause. The reason of this is that no effect results outside the order of a particular cause, except through some other impeding cause; which other cause must itself be reduced to the first universal cause; as indigestion may occur outside the order of the nutritive power by some such impediment as the

coarseness of the food, which again is to be ascribed to some other cause, and so on till we come to the first universal cause. Therefore as God is the first universal cause, not of one genus only, but of all being in general, it is impossible for anything to occur outside the order of the Divine government; but from the very fact that from one point of view something seems to evade the order of Divine providence considered in regard to one particular cause, it must necessarily come back to that order as regards some other cause.

Reply to Objection 1. There is nothing wholly evil in the world, for evil is ever founded on good, as shown above (q. 48, a. 3). Therefore something is said to be evil through its escaping from the order of some particular good. If it wholly escaped from the order of the Divine government, it would wholly cease to exist.

Reply to Objection 2. Things are said to be fortuitous as regards some particular cause from the order of which they escape. But as to the order of Divine providence, “nothing in the world happens by chance,” as Augustine declares (QQ. 83, qu. 24).

Reply to Objection 3. Certain effects are said to be contingent as compared to their proximate causes, which may fail in their effects; and not as though anything could happen entirely outside the order of Divine government. The very fact that something occurs outside the order of some proximate cause, is owing to some other cause, itself subject to the Divine government.

Objection 1. It would seem possible that some resistance can be made to the order of the Divine government. For it is written (Is. 3:8): “Their tongue and their devices are against the Lord.”

Objection 2. Further, a king does not justly punish those who do not rebel against his commands. Therefore if no one rebelled against God’s commands, no one would be justly punished by God.

Objection 3. Further, everything is subject to the order of the Divine government. But some things oppose others. Therefore some things rebel against the order of the Divine government.

On the contrary, Boethius says (De Consol. iii): “There is nothing that can desire or is able to resist this sovereign good. It is this sovereign good therefore that ruleth all mightily and ordereth all sweetly,” as is said (Wis. 8) of Divine wisdom.

I answer that, We may consider the order of Divine providence in two ways: in general, inasmuch as it proceeds from the governing cause of all; and in particular, inasmuch as it proceeds from some particular cause which executes the order of the Divine government.

Considered in the first way, nothing can resist the order of the Divine government. This can be proved in two ways: firstly from the fact that the order of the

Divine government is wholly directed to good, and everything by its own operation and effort tends to good only, “for no one acts intending evil,” as Dionysius says (Div. Nom. iv): secondly from the fact that, as we have said above (a. 1, ad 3; a. 5, ad 2), every inclination of anything, whether natural or voluntary, is nothing but a kind of impression from the first mover; as the inclination of the arrow towards a fixed point is nothing but an impulse received from the archer. Wherefore every agent, whether natural or free, attains to its divinely appointed end, as though of its own accord. For this reason God is said “to order all things sweetly.”

Reply to Objection 1. Some are said to think or speak, or act against God: not that they entirely resist the order of the Divine government; for even the sinner intends the attainment of a certain good: but because they resist some particular good, which belongs to their nature or state. Therefore they are justly punished by God.

Reply obj. 2 is clear from the above.

Reply to Objection 3. From the fact that one thing opposes another, it follows that some one thing can resist the order of a particular cause; but not that order which depends on the universal cause of all things.

FIRST PART, QUESTION 104

The Special Effects of the Divine Government (In Four Articles)

We next consider the effects of the Divine government in particular; concerning which four points of inquiry arise:

- (1) Whether creatures need to be kept in existence by God?
- (2) Whether they are immediately preserved by God?
- (3) Whether God can reduce anything to nothingness?
- (4) Whether anything is reduced to nothingness?

Whether creatures need to be kept in being by God?

Ia q. 104 a. 1

Objection 1. It would seem that creatures do not need to be kept in being by God. For what cannot not-be, does not need to be kept in being; just as that which cannot depart, does not need to be kept from departing. But some creatures by their very nature cannot not-be. Therefore not all creatures need to be kept in being by God. The middle proposition is proved thus. That which is included in the nature of a thing is necessarily in that thing, and its contrary cannot be in it; thus a multiple of two must necessarily be even, and cannot possibly be an odd number. Now form brings being with itself, because everything is actually in being, so far as it has form. But some creatures are subsistent forms, as we have said of the angels (q. 50, Aa. 2,5): and thus to be is in them of themselves. The same reasoning applies to those creatures whose matter is in potentiality to one form only, as above explained of heavenly bodies (q. 66, a. 2). Therefore such creatures as these have in their nature to be necessarily, and cannot not-be; for there can be no potentiality to not-being, either in the form which has being of itself, or in matter existing under a form which it cannot lose, since it is not in potentiality to any other form.

Objection 2. Further, God is more powerful than any created agent. But a created agent, even after ceasing to act, can cause its effect to be preserved in being; thus the house continues to stand after the builder has ceased to build; and water remains hot for some time after the fire has ceased to heat. Much more, therefore, can God cause His creature to be kept in being, after He has ceased to create it.

Objection 3. Further, nothing violent can occur, except there be some active cause thereof. But tendency to not-being is unnatural and violent to any creature, since all creatures naturally desire to be. Therefore no creature can tend to not-being, except through some active cause of corruption. Now there are creatures of such a nature that nothing can cause them to corrupt; such are spiritual substances and heavenly bodies. Therefore such creatures cannot tend to not-being, even if God were to withdraw His action.

Objection 4. Further, if God keeps creatures in being, this is done by some action. Now every action of

an agent, if that action be efficacious, produces something in the effect. Therefore the preserving power of God must produce something in the creature. But this is not so; because this action does not give being to the creature, since being is not given to that which already is: nor does it add anything new to the creature; because either God would not keep the creature in being continually, or He would be continually adding something new to the creature; either of which is unreasonable. Therefore creatures are not kept in being by God.

On the contrary, It is written (Heb. 1:3): “Upholding all things by the word of His power.”

I answer that, Both reason and faith bind us to say that creatures are kept in being by God. To make this clear, we must consider that a thing is preserved by another in two ways. First, indirectly, and accidentally; thus a person is said to preserve anything by removing the cause of its corruption, as a man may be said to preserve a child, whom he guards from falling into the fire. In this way God preserves some things, but not all, for there are some things of such a nature that nothing can corrupt them, so that it is not necessary to keep them from corruption. Secondly, a thing is said to preserve another ‘per se’ and directly, namely, when what is preserved depends on the preserver in such a way that it cannot exist without it. In this manner all creatures need to be preserved by God. For the being of every creature depends on God, so that not for a moment could it subsist, but would fall into nothingness were it not kept in being by the operation of the Divine power, as Gregory says (Moral. xvi).

This is made clear as follows: Every effect depends on its cause, so far as it is its cause. But we must observe that an agent may be the cause of the “becoming” of its effect, but not directly of its “being.” This may be seen both in artificial and in natural beings: for the builder causes the house in its “becoming,” but he is not the direct cause of its “being.” For it is clear that the “being” of the house is a result of its form, which consists in the putting together and arrangement of the materials, and results from the natural qualities of certain things. Thus a cook dresses the food by applying the natural activity of fire; thus a builder constructs a house, by making

use of cement, stones, and wood which are able to be put together in a certain order and to preserve it. Therefore the “being” of a house depends on the nature of these materials, just as its “becoming” depends on the action of the builder. The same principle applies to natural things. For if an agent is not the cause of a form as such, neither will it be directly the cause of “being” which results from that form; but it will be the cause of the effect, in its “becoming” only.

Now it is clear that of two things in the same species one cannot directly cause the other’s form as such, since it would then be the cause of its own form, which is essentially the same as the form of the other; but it can be the cause of this form for as much as it is in matter—in other words, it may be the cause that “this matter” receives “this form.” And this is to be the cause of “becoming,” as when man begets man, and fire causes fire. Thus whenever a natural effect is such that it has an aptitude to receive from its active cause an impression specifically the same as in that active cause, then the “becoming” of the effect, but not its “being,” depends on the agent.

Sometimes, however, the effect has not this aptitude to receive the impression of its cause, in the same way as it exists in the agent: as may be seen clearly in all agents which do not produce an effect of the same species as themselves: thus the heavenly bodies cause the generation of inferior bodies which differ from them in species. Such an agent can be the cause of a form as such, and not merely as existing in this matter, consequently it is not merely the cause of “becoming” but also the cause of “being.”

Therefore as the becoming of a thing cannot continue when that action of the agent ceases which causes the “becoming” of the effect: so neither can the “being” of a thing continue after that action of the agent has ceased, which is the cause of the effect not only in “becoming” but also in “being.” This is why hot water retains heat after the cessation of the fire’s action; while, on the contrary, the air does not continue to be lit up, even for a moment, when the sun ceases to act upon it, because water is a matter susceptible of the fire’s heat in the same way as it exists in the fire. Wherefore if it were to be reduced to the perfect form of fire, it would retain that form always; whereas if it has the form of fire imperfectly and inchoately, the heat will remain for

a time only, by reason of the imperfect participation of the principle of heat. On the other hand, air is not of such a nature as to receive light in the same way as it exists in the sun, which is the principle of light. Therefore, since it has not root in the air, the light ceases with the action of the sun.

Now every creature may be compared to God, as the air is to the sun which enlightens it. For as the sun possesses light by its nature, and as the air is enlightened by sharing the sun’s nature; so God alone is Being in virtue of His own Essence, since His Essence is His existence; whereas every creature has being by participation, so that its essence is not its existence. Therefore, as Augustine says (*Gen. ad lit. iv, 12*): “If the ruling power of God were withdrawn from His creatures, their nature would at once cease, and all nature would collapse.” In the same work (*Gen. ad lit. viii, 12*) he says: “As the air becomes light by the presence of the sun, so is man enlightened by the presence of God, and in His absence returns at once to darkness.”

Reply to Objection 1. “Being” naturally results from the form of a creature, given the influence of the Divine action; just as light results from the diaphanous nature of the air, given the action of the sun. Wherefore the potentiality to not-being in spiritual creatures and heavenly bodies is rather something in God, Who can withdraw His influence, than in the form or matter of those creatures.

Reply to Objection 2. God cannot grant to a creature to be preserved in being after the cessation of the Divine influence: as neither can He make it not to have received its being from Himself. For the creature needs to be preserved by God in so far as the being of an effect depends on the cause of its being. So that there is no comparison with an agent that is not the cause of ‘being’ but only of “becoming.”

Reply to Objection 3. This argument holds in regard to that preservation which consists in the removal of corruption: but all creatures do not need to be preserved thus, as stated above.

Reply to Objection 4. The preservation of things by God is a continuation of that action whereby He gives existence, which action is without either motion or time; so also the preservation of light in the air is by the continual influence of the sun.

Whether God preserves every creature immediately?

Ia q. 104 a. 2

Objection 1. It would seem that God preserves every creature immediately. For God creates and preserves things by the same action, as above stated (a. 1, ad 4). But God created all things immediately. Therefore He preserves all things immediately.

Objection 2. Further, a thing is nearer to itself than to another. But it cannot be given to a creature to preserve itself; much less therefore can it be given to a crea-

ture to preserve another. Therefore God preserves all things without any intermediate cause preserving them.

Objection 3. Further, an effect is kept in being by the cause, not only of its “becoming,” but also of its being. But all created causes do not seem to cause their effects except in their “becoming,” for they cause only by moving, as above stated (q. 45, a. 3). Therefore they do not cause so as to keep their effects in being.

On the contrary, A thing is kept in being by that which gives it being. But God gives being by means of certain intermediate causes. Therefore He also keeps things in being by means of certain causes.

I answer that, As stated above (a. 1), a thing keeps another in being in two ways; first, indirectly and accidentally, by removing or hindering the action of a corrupting cause; secondly, directly and “per se,” by the fact that that on it depends the other’s being, as the being of the effect depends on the cause. And in both ways a created thing keeps another in being. For it is clear that even in corporeal things there are many causes which hinder the action of corrupting agents, and for that reason are called preservatives; just as salt preserves meat from putrefaction; and in like manner with many other things. It happens also that an effect depends on a creature as to its being. For when we have a series of causes depending on one another, it necessarily follows that, while the effect depends first and principally on the first cause, it also depends in a secondary way on all the middle causes. Therefore the first cause is the principal cause of the preservation of the effect which is to be referred to the middle causes in a secondary way; and all the more so, as the middle cause is higher and nearer to the first cause.

For this reason, even in things corporeal, the preservation and continuation of things is ascribed to the higher causes: thus the Philosopher says (Metaph. xii, Did. xi, 6), that the first, namely the diurnal move-

ment is the cause of the continuation of things generated; whereas the second movement, which is from the zodiac, is the cause of diversity owing to generation and corruption. In like manner astrologers ascribe to Saturn, the highest of the planets, those things which are permanent and fixed. So we conclude that God keeps certain things in being, by means of certain causes.

Reply to Objection 1. God created all things immediately, but in the creation itself He established an order among things, so that some depend on others, by which they are preserved in being, though He remains the principal cause of their preservation.

Reply to Objection 2. Since an effect is preserved by its proper cause on which it depends; just as no effect can be its own cause, but can only produce another effect, so no effect can be endowed with the power of self-preservation, but only with the power of preserving another.

Reply to Objection 3. No created nature can be the cause of another, as regards the latter acquiring a new form, or disposition, except by virtue of some change; for the created nature acts always on something presupposed. But after causing the form or disposition in the effect, without any fresh change in the effect, the cause preserves that form or disposition; as in the air, when it is lit up anew, we must allow some change to have taken place, while the preservation of the light is without any further change in the air due to the presence of the source of light.

Whether God can annihilate anything?

Ia q. 104 a. 3

Objection 1. It would seem that God cannot annihilate anything. For Augustine says (QQ. 83, qu. 21) that “God is not the cause of anything tending to non-existence.” But He would be such a cause if He were to annihilate anything. Therefore He cannot annihilate anything.

Objection 2. Further, by His goodness God is the cause why things exist, since, as Augustine says (De Doctr. Christ. i, 32): “Because God is good, we exist.” But God cannot cease to be good. Therefore He cannot cause things to cease to exist; which would be the case were He to annihilate anything.

Objection 3. Further, if God were to annihilate anything it would be by His action. But this cannot be; because the term of every action is existence. Hence even the action of a corrupting cause has its term in something generated; for when one thing is generated another undergoes corruption. Therefore God cannot annihilate anything.

On the contrary, It is written (Jer. 10:24): “Correct me, O Lord, but yet with judgment; and not in Thy fury, lest Thou bring me to nothing.”

I answer that, Some have held that God, in giving existence to creatures, acted from natural necessity. Were this true, God could not annihilate anything, since

His nature cannot change. But, as we have said above (q. 19, a. 4), such an opinion is entirely false, and absolutely contrary to the Catholic faith, which confesses that God created things of His own free-will, according to Ps. 134:6: “Whatsoever the Lord pleased, He hath done.” Therefore that God gives existence to a creature depends on His will; nor does He preserve things in existence otherwise than by continually pouring out existence into them, as we have said. Therefore, just as before things existed, God was free not to give them existence, and not to make them; so after they are made, He is free not to continue their existence; and thus they would cease to exist; and this would be to annihilate them.

Reply to Objection 1. Non-existence has no direct cause; for nothing is a cause except inasmuch as it has existence, and a being essentially as such is a cause of something existing. Therefore God cannot cause a thing to tend to non-existence, whereas a creature has this tendency of itself, since it is produced from nothing. But indirectly God can be the cause of things being reduced to non-existence, by withdrawing His action therefrom.

Reply to Objection 2. God’s goodness is the cause of things, not as though by natural necessity, because the Divine goodness does not depend on creatures; but

by His free-will. Wherefore, as without prejudice to His goodness, He might not have produced things into existence, so, without prejudice to His goodness, He might not preserve things in existence.

Reply to Objection 3. If God were to annihilate anything, this would not imply an action on God's part; but a mere cessation of His action.

Whether anything is annihilated?

Ia q. 104 a. 4

Objection 1. It would seem that something is annihilated. For the end corresponds to the beginning. But in the beginning there was nothing but God. Therefore all things must tend to this end, that there shall be nothing but God. Therefore creatures will be reduced to nothing.

Objection 2. Further, every creature has a finite power. But no finite power extends to the infinite. Wherefore the Philosopher proves (Phys. viii, 10) that, "a finite power cannot move in infinite time." Therefore a creature cannot last for an infinite duration; and so at some time it will be reduced to nothing.

Objection 3. Further, forms and accidents have no matter as part of themselves. But at some time they cease to exist. Therefore they are reduced to nothing.

On the contrary, It is written (Eccles. 3:14): "I have learned that all the works that God hath made continue for ever."

I answer that, Some of those things which God does in creatures occur in accordance with the natural course of things; others happen miraculously, and not in accordance with the natural order, as will be explained (q. 105, a. 6). Now whatever God wills to do according to the natural order of things may be observed from their nature; but those things which occur miraculously, are ordered for the manifestation of grace, according to the Apostle, "To each one is given the manifestation of the Spirit, unto profit" (1 Cor. 12:7); and subsequently he mentions, among others, the working of miracles.

Now the nature of creatures shows that none of them is annihilated. For, either they are immaterial, and therefore have no potentiality to non-existence; or they are material, and then they continue to exist, at least in matter, which is incorruptible, since it is the subject

of generation and corruption. Moreover, the annihilation of things does not pertain to the manifestation of grace; since rather the power and goodness of God are manifested by the preservation of things in existence. Wherefore we must conclude by denying absolutely that anything at all will be annihilated.

Reply to Objection 1. That things are brought into existence from a state of non-existence, clearly shows the power of Him Who made them; but that they should be reduced to nothing would hinder that manifestation, since the power of God is conspicuously shown in His preserving all things in existence, according to the Apostle: "Upholding all things by the word of His power" (Heb. 1:3).

Reply to Objection 2. A creature's potentiality to existence is merely receptive; the active power belongs to God Himself, from Whom existence is derived. Wherefore the infinite duration of things is a consequence of the infinity of the Divine power. To some things, however, is given a determinate power of duration for a certain time, so far as they may be hindered by some contrary agent from receiving the influx of existence which comes from Him Whom finite power cannot resist, for an infinite, but only for a fixed time. So things which have no contrary, although they have a finite power, continue to exist for ever.

Reply to Objection 3. Forms and accidents are not complete beings, since they do not subsist: but each one of them is something "of a being"; for it is called a being, because something is by it. Yet so far as their mode of existence is concerned, they are not entirely reduced to nothingness; not that any part of them survives, but that they remain in the potentiality of the matter, or of the subject.

Objection 1. It would seem that creatures do not need to be kept in being by God. For what cannot not-be, does not need to be kept in being; just as that which cannot depart, does not need to be kept from departing. But some creatures by their very nature cannot not-be. Therefore not all creatures need to be kept in being by God. The middle proposition is proved thus. That which is included in the nature of a thing is necessarily in that thing, and its contrary cannot be in it; thus a multiple of two must necessarily be even, and cannot possibly be an odd number. Now form brings being with itself, because everything is actually in being, so far as it has form. But some creatures are subsistent forms, as we have said of the angels (q. 50, Aa. 2,5): and thus to be is in them of themselves. The same reasoning applies to those creatures whose matter is in potentiality to one form only, as above explained of heavenly bodies (q. 66, a. 2). Therefore such creatures as these have in their nature to be necessarily, and cannot not-be; for there can be no potentiality to not-being, either in the form which has being of itself, or in matter existing under a form which it cannot lose, since it is not in potentiality to any other form.

Objection 2. Further, God is more powerful than any created agent. But a created agent, even after ceasing to act, can cause its effect to be preserved in being; thus the house continues to stand after the builder has ceased to build; and water remains hot for some time after the fire has ceased to heat. Much more, therefore, can God cause His creature to be kept in being, after He has ceased to create it.

Objection 3. Further, nothing violent can occur, except there be some active cause thereof. But tendency to not-being is unnatural and violent to any creature, since all creatures naturally desire to be. Therefore no creature can tend to not-being, except through some active cause of corruption. Now there are creatures of such a nature that nothing can cause them to corrupt; such are spiritual substances and heavenly bodies. Therefore such creatures cannot tend to not-being, even if God were to withdraw His action.

Objection 4. Further, if God keeps creatures in being, this is done by some action. Now every action of an agent, if that action be efficacious, produces something in the effect. Therefore the preserving power of God must produce something in the creature. But this is not so; because this action does not give being to the creature, since being is not given to that which already is: nor does it add anything new to the creature; because either God would not keep the creature in being continually, or He would be continually adding something new to the creature; either of which is unreasonable. Therefore creatures are not kept in being by God.

On the contrary, It is written (Heb. 1:3): “Upholding all things by the word of His power.”

I answer that, Both reason and faith bind us to say

that creatures are kept in being by God. To make this clear, we must consider that a thing is preserved by another in two ways. First, indirectly, and accidentally; thus a person is said to preserve anything by removing the cause of its corruption, as a man may be said to preserve a child, whom he guards from falling into the fire. In this way God preserves some things, but not all, for there are some things of such a nature that nothing can corrupt them, so that it is not necessary to keep them from corruption. Secondly, a thing is said to preserve another ‘per se’ and directly, namely, when what is preserved depends on the preserver in such a way that it cannot exist without it. In this manner all creatures need to be preserved by God. For the being of every creature depends on God, so that not for a moment could it subsist, but would fall into nothingness were it not kept in being by the operation of the Divine power, as Gregory says (Moral. xvi).

This is made clear as follows: Every effect depends on its cause, so far as it is its cause. But we must observe that an agent may be the cause of the “becoming” of its effect, but not directly of its “being.” This may be seen both in artificial and in natural beings: for the builder causes the house in its “becoming,” but he is not the direct cause of its “being.” For it is clear that the “being” of the house is a result of its form, which consists in the putting together and arrangement of the materials, and results from the natural qualities of certain things. Thus a cook dresses the food by applying the natural activity of fire; thus a builder constructs a house, by making use of cement, stones, and wood which are able to be put together in a certain order and to preserve it. Therefore the “being” of a house depends on the nature of these materials, just as its “becoming” depends on the action of the builder. The same principle applies to natural things. For if an agent is not the cause of a form as such, neither will it be directly the cause of “being” which results from that form; but it will be the cause of the effect, in its “becoming” only.

Now it is clear that of two things in the same species one cannot directly cause the other’s form as such, since it would then be the cause of its own form, which is essentially the same as the form of the other; but it can be the cause of this form for as much as it is in matter—in other words, it may be the cause that “this matter” receives “this form.” And this is to be the cause of “becoming,” as when man begets man, and fire causes fire. Thus whenever a natural effect is such that it has an aptitude to receive from its active cause an impression specifically the same as in that active cause, then the “becoming” of the effect, but not its “being,” depends on the agent.

Sometimes, however, the effect has not this aptitude to receive the impression of its cause, in the same way as it exists in the agent: as may be seen clearly in all agents which do not produce an effect of the same

species as themselves: thus the heavenly bodies cause the generation of inferior bodies which differ from them in species. Such an agent can be the cause of a form as such, and not merely as existing in this matter, consequently it is not merely the cause of “becoming” but also the cause of “being.”

Therefore as the becoming of a thing cannot continue when that action of the agent ceases which causes the “becoming” of the effect: so neither can the “being” of a thing continue after that action of the agent has ceased, which is the cause of the effect not only in “becoming” but also in “being.” This is why hot water retains heat after the cessation of the fire’s action; while, on the contrary, the air does not continue to be lit up, even for a moment, when the sun ceases to act upon it, because water is a matter susceptible of the fire’s heat in the same way as it exists in the fire. Wherefore if it were to be reduced to the perfect form of fire, it would retain that form always; whereas if it has the form of fire imperfectly and inchoately, the heat will remain for a time only, by reason of the imperfect participation of the principle of heat. On the other hand, air is not of such a nature as to receive light in the same way as it exists in the sun, which is the principle of light. Therefore, since it has not root in the air, the light ceases with the action of the sun.

Now every creature may be compared to God, as the air is to the sun which enlightens it. For as the sun possesses light by its nature, and as the air is enlightened by sharing the sun’s nature; so God alone is Being in virtue of His own Essence, since His Essence is His existence; whereas every creature has being by participation, so that its essence is not its existence. Therefore, as Au-

gustine says (Gen. ad lit. iv, 12): “If the ruling power of God were withdrawn from His creatures, their nature would at once cease, and all nature would collapse.” In the same work (Gen. ad lit. viii, 12) he says: “As the air becomes light by the presence of the sun, so is man enlightened by the presence of God, and in His absence returns at once to darkness.”

Reply to Objection 1. “Being” naturally results from the form of a creature, given the influence of the Divine action; just as light results from the diaphanous nature of the air, given the action of the sun. Wherefore the potentiality to not-being in spiritual creatures and heavenly bodies is rather something in God, Who can withdraw His influence, than in the form or matter of those creatures.

Reply to Objection 2. God cannot grant to a creature to be preserved in being after the cessation of the Divine influence: as neither can He make it not to have received its being from Himself. For the creature needs to be preserved by God in so far as the being of an effect depends on the cause of its being. So that there is no comparison with an agent that is not the cause of ‘being’ but only of “becoming.”

Reply to Objection 3. This argument holds in regard to that preservation which consists in the removal of corruption: but all creatures do not need to be preserved thus, as stated above.

Reply to Objection 4. The preservation of things by God is a continuation of that action whereby He gives existence, which action is without either motion or time; so also the preservation of light in the air is by the continual influence of the sun.

Objection 1. It would seem that God preserves every creature immediately. For God creates and preserves things by the same action, as above stated (a. 1, ad 4). But God created all things immediately. Therefore He preserves all things immediately.

Objection 2. Further, a thing is nearer to itself than to another. But it cannot be given to a creature to preserve itself; much less therefore can it be given to a creature to preserve another. Therefore God preserves all things without any intermediate cause preserving them.

Objection 3. Further, an effect is kept in being by the cause, not only of its “becoming,” but also of its being. But all created causes do not seem to cause their effects except in their “becoming,” for they cause only by moving, as above stated (q. 45, a. 3). Therefore they do not cause so as to keep their effects in being.

On the contrary, A thing is kept in being by that which gives it being. But God gives being by means of certain intermediate causes. Therefore He also keeps things in being by means of certain causes.

I answer that, As stated above (a. 1), a thing keeps another in being in two ways; first, indirectly and accidentally, by removing or hindering the action of a corrupting cause; secondly, directly and “per se,” by the fact that that on it depends the other’s being, as the being of the effect depends on the cause. And in both ways a created thing keeps another in being. For it is clear that even in corporeal things there are many causes which hinder the action of corrupting agents, and for that reason are called preservatives; just as salt preserves meat from putrefaction; and in like manner with many other things. It happens also that an effect depends on a creature as to its being. For when we have a series of causes depending on one another, it necessarily follows that, while the effect depends first and principally on the first cause, it also depends in a secondary way on all the middle causes. Therefore the first cause is the princi-

pal cause of the preservation of the effect which is to be referred to the middle causes in a secondary way; and all the more so, as the middle cause is higher and nearer to the first cause.

For this reason, even in things corporeal, the preservation and continuation of things is ascribed to the higher causes: thus the Philosopher says (*Metaph.* xii, *Did.* xi, 6), that the first, namely the diurnal movement is the cause of the continuation of things generated; whereas the second movement, which is from the zodiac, is the cause of diversity owing to generation and corruption. In like manner astrologers ascribe to Saturn, the highest of the planets, those things which are permanent and fixed. So we conclude that God keeps certain things in being, by means of certain causes.

Reply to Objection 1. God created all things immediately, but in the creation itself He established an order among things, so that some depend on others, by which they are preserved in being, though He remains the principal cause of their preservation.

Reply to Objection 2. Since an effect is preserved by its proper cause on which it depends; just as no effect can be its own cause, but can only produce another effect, so no effect can be endowed with the power of self-preservation, but only with the power of preserving another.

Reply to Objection 3. No created nature can be the cause of another, as regards the latter acquiring a new form, or disposition, except by virtue of some change; for the created nature acts always on something presupposed. But after causing the form or disposition in the effect, without any fresh change in the effect, the cause preserves that form or disposition; as in the air, when it is lit up anew, we must allow some change to have taken place, while the preservation of the light is without any further change in the air due to the presence of the source of light.

Objection 1. It would seem that God cannot annihilate anything. For Augustine says (QQ. 83, qu. 21) that “God is not the cause of anything tending to non-existence.” But He would be such a cause if He were to annihilate anything. Therefore He cannot annihilate anything.

Objection 2. Further, by His goodness God is the cause why things exist, since, as Augustine says (De Doctr. Christ. i, 32): “Because God is good, we exist.” But God cannot cease to be good. Therefore He cannot cause things to cease to exist; which would be the case were He to annihilate anything.

Objection 3. Further, if God were to annihilate anything it would be by His action. But this cannot be; because the term of every action is existence. Hence even the action of a corrupting cause has its term in something generated; for when one thing is generated another undergoes corruption. Therefore God cannot annihilate anything.

On the contrary, It is written (Jer. 10:24): “Correct me, O Lord, but yet with judgment; and not in Thy fury, lest Thou bring me to nothing.”

I answer that, Some have held that God, in giving existence to creatures, acted from natural necessity. Were this true, God could not annihilate anything, since His nature cannot change. But, as we have said above (q. 19, a. 4), such an opinion is entirely false, and absolutely contrary to the Catholic faith, which confesses that God created things of His own free-will, according

to Ps. 134:6: “Whatsoever the Lord pleased, He hath done.” Therefore that God gives existence to a creature depends on His will; nor does He preserve things in existence otherwise than by continually pouring out existence into them, as we have said. Therefore, just as before things existed, God was free not to give them existence, and not to make them; so after they are made, He is free not to continue their existence; and thus they would cease to exist; and this would be to annihilate them.

Reply to Objection 1. Non-existence has no direct cause; for nothing is a cause except inasmuch as it has existence, and a being essentially as such is a cause of something existing. Therefore God cannot cause a thing to tend to non-existence, whereas a creature has this tendency of itself, since it is produced from nothing. But indirectly God can be the cause of things being reduced to non-existence, by withdrawing His action therefrom.

Reply to Objection 2. God’s goodness is the cause of things, not as though by natural necessity, because the Divine goodness does not depend on creatures; but by His free-will. Wherefore, as without prejudice to His goodness, He might not have produced things into existence, so, without prejudice to His goodness, He might not preserve things in existence.

Reply to Objection 3. If God were to annihilate anything, this would not imply an action on God’s part; but a mere cessation of His action.

Objection 1. It would seem that something is annihilated. For the end corresponds to the beginning. But in the beginning there was nothing but God. Therefore all things must tend to this end, that there shall be nothing but God. Therefore creatures will be reduced to nothing.

Objection 2. Further, every creature has a finite power. But no finite power extends to the infinite. Wherefore the Philosopher proves (Phys. viii, 10) that, “a finite power cannot move in infinite time.” Therefore a creature cannot last for an infinite duration; and so at some time it will be reduced to nothing.

Objection 3. Further, forms and accidents have no matter as part of themselves. But at some time they cease to exist. Therefore they are reduced to nothing.

On the contrary, It is written (Eccles. 3:14): “I have learned that all the works that God hath made continue for ever.”

I answer that, Some of those things which God does in creatures occur in accordance with the natural course of things; others happen miraculously, and not in accordance with the natural order, as will be explained (q. 105, a. 6). Now whatever God wills to do according to the natural order of things may be observed from their nature; but those things which occur miraculously, are ordered for the manifestation of grace, according to the Apostle, “To each one is given the manifestation of the Spirit, unto profit” (1 Cor. 12:7); and subsequently he mentions, among others, the working of miracles.

Now the nature of creatures shows that none of them is annihilated. For, either they are immaterial, and therefore have no potentiality to non-existence; or they are material, and then they continue to exist, at least in matter, which is incorruptible, since it is the subject

of generation and corruption. Moreover, the annihilation of things does not pertain to the manifestation of grace; since rather the power and goodness of God are manifested by the preservation of things in existence. Wherefore we must conclude by denying absolutely that anything at all will be annihilated.

Reply to Objection 1. That things are brought into existence from a state of non-existence, clearly shows the power of Him Who made them; but that they should be reduced to nothing would hinder that manifestation, since the power of God is conspicuously shown in His preserving all things in existence, according to the Apostle: “Upholding all things by the word of His power” (Heb. 1:3).

Reply to Objection 2. A creature’s potentiality to existence is merely receptive; the active power belongs to God Himself, from Whom existence is derived. Wherefore the infinite duration of things is a consequence of the infinity of the Divine power. To some things, however, is given a determinate power of duration for a certain time, so far as they may be hindered by some contrary agent from receiving the influx of existence which comes from Him Whom finite power cannot resist, for an infinite, but only for a fixed time. So things which have no contrary, although they have a finite power, continue to exist for ever.

Reply to Objection 3. Forms and accidents are not complete beings, since they do not subsist: but each one of them is something “of a being”; for it is called a being, because something is by it. Yet so far as their mode of existence is concerned, they are not entirely reduced to nothingness; not that any part of them survives, but that they remain in the potentiality of the matter, or of the subject.

FIRST PART, QUESTION 105

Of the Change of Creatures by God (In Eight Articles)

We now consider the second effect of the Divine government, i.e. the change of creatures; and first, the change of creatures by God; secondly, the change of one creature by another.

Under the first head there are eight points of inquiry:

- (1) Whether God can move immediately the matter to the form?
- (2) Whether He can immediately move a body?
- (3) Whether He can move the intellect?
- (4) Whether He can move the will?
- (5) Whether God works in every worker?
- (6) Whether He can do anything outside the order imposed on things?
- (7) Whether all that God does is miraculous?
- (8) Of the diversity of miracles.

Whether God can move the matter immediately to the form?

Ia q. 105 a. 1

Objection 1. It would seem that God cannot move the matter immediately to receive the form. For as the Philosopher proves (Metaph. vii, Did. vi, 8), nothing can bring a form into any particular matter, except that form which is in matter; because, like begets like. But God is not a form in matter. Therefore He cannot cause a form in matter.

Objection 2. Further, any agent inclined to several effects will produce none of them, unless it is determined to a particular one by some other cause; for, as the Philosopher says (De Anima iii, 11), a general assertion does not move the mind, except by means of some particular apprehension. But the Divine power is the universal cause of all things. Therefore it cannot produce any particular form, except by means of a particular agent.

Objection 3. As universal being depends on the first universal cause, so determinate being depends on determinate particular causes; as we have seen above (q. 104, a. 2). But the determinate being of a particular thing is from its own form. Therefore the forms of things are produced by God, only by means of particular causes.

On the contrary, It is written (Gn. 2:7): "God formed man of the slime of the earth."

I answer that, God can move matter immediately to form; because whatever is in passive potentiality can be reduced to act by the active power which extends over that potentiality. Therefore, since the Divine power extends over matter, as produced by God, it can be reduced to act by the Divine power: and this is what is meant by matter being moved to a form; for a form is nothing else but the act of matter.

Reply to Objection 1. An effect is assimilated to

the active cause in two ways. First, according to the same species; as man is generated by man, and fire by fire. Secondly, by being virtually contained in the cause; as the form of the effect is virtually contained in its cause: thus animals produced by putrefaction, and plants, and minerals are like the sun and stars, by whose power they are produced. In this way the effect is like its active cause as regards all that over which the power of that cause extends. Now the power of God extends to both matter and form; as we have said above (q. 14, a. 2; q. 44, a. 2); wherefore if a composite thing be produced, it is likened to God by way of a virtual inclusion; or it is likened to the composite generator by a likeness of species. Therefore just as the composite generator can move matter to a form by generating a composite thing like itself; so also can God. But no other form not existing in matter can do this; because the power of no other separate substance extends over matter. Hence angels and demons operate on visible matter; not by imprinting forms in matter, but by making use of corporeal seeds.

Reply to Objection 2. This argument would hold if God were to act of natural necessity. But since He acts by His will and intellect, which knows the particular and not only the universal natures of all forms, it follows that He can determinately imprint this or that form on matter.

Reply to Objection 3. The fact that secondary causes are ordered to determinate effects is due to God; wherefore since God ordains other causes to certain effects He can also produce certain effects by Himself without any other cause.

Objection 1. It would seem that God cannot move a body immediately. For as the mover and the moved must exist simultaneously, as the Philosopher says (Phys. vii, 2), it follows that there must be some contact between the mover and moved. But there can be no contact between God and a body; for Dionysius says (Div. Nom. 1): “There is no contact with God.” Therefore God cannot move a body immediately.

Objection 2. Further, God is the mover unmoved. But such also is the desirable object when apprehended. Therefore God moves as the object of desire and apprehension. But He cannot be apprehended except by the intellect, which is neither a body nor a corporeal power. Therefore God cannot move a body immediately.

Objection 3. Further, the Philosopher proves (Phys. viii, 10) that an infinite power moves instantaneously. But it is impossible for a body to be moved in one instant; for since every movement is between opposites, it follows that two opposites would exist at once in the same subject, which is impossible. Therefore a body cannot be moved immediately by an infinite power. But God’s power is infinite, as we have explained (q. 25, a. 2). Therefore God cannot move a body immediately.

On the contrary, God produced the works of the six days immediately among which is included the movements of bodies, as is clear from Gn. 1:9 “Let the waters be gathered together into one place.” Therefore God alone can move a body immediately.

I answer that, It is erroneous to say that God cannot Himself produce all the determinate effects which are produced by any created cause. Wherefore, since bodies are moved immediately by created causes, we cannot possibly doubt that God can move immediately any bodies whatever. This indeed follows from what is above stated (a. 1). For every movement of any body whatever, either results from a form, as the movements of things heavy and light result from the form which they have from their generating cause, for which reason the generator is called the mover; or else tends to a form, as heating tends to the form of heat. Now it belongs to the same cause, to imprint a form, to dispose to that form, and to give the movement which results from that form; for fire not only generates fire, but it also heats and moves things upwards. Therefore, as God can im-

print form immediately in matter, it follows that He can move any body whatever in respect of any movement whatever.

Reply to Objection 1. There are two kinds of contact; corporeal contact, when two bodies touch each other; and virtual contact, as the cause of sadness is said to touch the one made sad. According to the first kind of contact, God, as being incorporeal, neither touches, nor is touched; but according to virtual contact He touches creatures by moving them; but He is not touched, because the natural power of no creature can reach up to Him. Thus did Dionysius understand the words, “There is no contact with God”; that is, so that God Himself be touched.

Reply to Objection 2. God moves as the object of desire and apprehension; but it does not follow that He always moves as being desired and apprehended by that which is moved; but as being desired and known by Himself; for He does all things for His own goodness.

Reply to Objection 3. The Philosopher (Phys. viii, 10) intends to prove that the power of the first mover is not a power of the first mover “of bulk,” by the following argument. The power of the first mover is infinite (which he proves from the fact that the first mover can move in infinite time). Now an infinite power, if it were a power “of bulk,” would move without time, which is impossible; therefore the infinite power of the first mover must be in something which is not measured by its bulk. Whence it is clear that for a body to be moved without time can only be the result of an infinite power. The reason is that every power of bulk moves in its entirety; since it moves by the necessity of its nature. But an infinite power surpasses out of all proportion any finite power. Now the greater the power of the mover, the greater is the velocity of the movement. Therefore, since a finite power moves in a determinate time, it follows that an infinite power does not move in any time; for between one time and any other time there is some proportion. On the other hand, a power which is not in bulk is the power of an intelligent being, which operates in its effects according to what is fitting to them; and therefore, since it cannot be fitting for a body to be moved without time, it does not follow that it moves without time.

Objection 1. It would seem that God does not immediately move the created intellect. For the action of the intellect is governed by its own subject; since it does not pass into external matter; as stated in Metaph. ix, Did. viii, 8. But the action of what is moved by another does not proceed from that wherein it is; but from the mover. Therefore the intellect is not moved by another; and so apparently God cannot move the created

intellect.

Objection 2. Further, anything which in itself is a sufficient principle of movement, is not moved by another. But the movement of the intellect is its act of understanding; in the sense in which we say that to understand or to feel is a kind of movement, as the Philosopher says (De Anima iii, 7). But the intellectual light which is natural to the soul, is a sufficient principle of

understanding. Therefore it is not moved by another.

Objection 3. Further, as the senses are moved by the sensible, so the intellect is moved by the intelligible. But God is not intelligible to us, and exceeds the capacity of our intellect. Therefore God cannot move our intellect.

On the contrary, The teacher moves the intellect of the one taught. But it is written (Ps. 93:10) that God “teaches man knowledge.” Therefore God moves the human intellect.

I answer that, As in corporeal movement that is called the mover which gives the form that is the principle of movement, so that is said to move the intellect, which is the cause of the form that is the principle of the intellectual operation, called the movement of the intellect. Now there is a twofold principle of intellectual operation in the intelligent being; one which is the intellectual power itself, which principle exists in the one who understands in potentiality; while the other is the principle of actual understanding, namely, the likeness of the thing understood in the one who understands. So a thing is said to move the intellect, whether it gives to him who understands the power of understanding; or impresses on him the likeness of the thing understood.

Now God moves the created intellect in both ways. For He is the First immaterial Being; and as intellectuality is a result of immateriality, it follows that He is the First intelligent Being. Therefore since in each order the first is the cause of all that follows, we must conclude that from Him proceeds all intellectual power. In like manner, since He is the First Being, and all other beings

pre-exist in Him as in their First Cause, it follows that they exist intelligibly in Him, after the mode of His own Nature. For as the intelligible types of everything exist first of all in God, and are derived from Him by other intellects in order that these may actually understand; so also are they derived by creatures that they may subsist. Therefore God so moves the created intellect, inasmuch as He gives it the intellectual power, whether natural, or superadded; and impresses on the created intellect the intelligible species, and maintains and preserves both power and species in existence.

Reply to Objection 1. The intellectual operation is performed by the intellect in which it exists, as by a secondary cause; but it proceeds from God as from its first cause. For by Him the power to understand is given to the one who understands.

Reply to Objection 2. The intellectual light together with the likeness of the thing understood is a sufficient principle of understanding; but it is a secondary principle, and depends upon the First Principle.

Reply to Objection 3. The intelligible object moves our human intellect, so far as, in a way, it impresses on it its own likeness, by means of which the intellect is able to understand it. But the likenesses which God impresses on the created intellect are not sufficient to enable the created intellect to understand Him through His Essence, as we have seen above (q. 12, a. 2; q. 56, a. 3). Hence He moves the created intellect, and yet He cannot be intelligible to it, as we have explained (q. 12, a. 4).

Whether God can move the created will?

Ia q. 105 a. 4

Objection 1. It would seem that God cannot move the created will. For whatever is moved from without, is forced. But the will cannot be forced. Therefore it is not moved from without; and therefore cannot be moved by God.

Objection 2. Further, God cannot make two contradictories to be true at the same time. But this would follow if He moved the will; for to be voluntarily moved means to be moved from within, and not by another. Therefore God cannot move the will.

Objection 3. Further, movement is attributed to the mover rather than to the one moved; wherefore homicide is not ascribed to the stone, but to the thrower. Therefore, if God moves the will, it follows that voluntary actions are not imputed to man for reward or blame. But this is false. Therefore God does not move the will.

On the contrary, It is written (Phil. 2:13): “It is God who worketh in us [Vulgate—‘you’] both to will and to accomplish.”

I answer that, As the intellect is moved by the object and by the Giver of the power of intelligence, as stated above (a. 3), so is the will moved by its object, which is good, and by Him who creates the power of

willing. Now the will can be moved by good as its object, but by God alone sufficiently and efficaciously. For nothing can move a movable thing sufficiently unless the active power of the mover surpasses or at least equals the potentiality of the thing movable. Now the potentiality of the will extends to the universal good; for its object is the universal good; just as the object of the intellect is the universal being. But every created good is some particular good; God alone is the universal good. Whereas He alone fills the capacity of the will, and moves it sufficiently as its object. In like manner the power of willing is caused by God alone. For to will is nothing but to be inclined towards the object of the will, which is universal good. But to incline towards the universal good belongs to the First Mover, to Whom the ultimate end is proportionate; just as in human affairs to him that presides over the community belongs the directing of his subjects to the common weal. Wherefore in both ways it belongs to God to move the will; but especially in the second way by an interior inclination of the will.

Reply to Objection 1. A thing moved by another is forced if moved against its natural inclination; but if it

is moved by another giving to it the proper natural inclination, it is not forced; as when a heavy body is made to move downwards by that which produced it, then it is not forced. In like manner God, while moving the will, does not force it, because He gives the will its own natural inclination.

Reply to Objection 2. To be moved voluntarily, is to be moved from within, that is, by an interior principle: yet this interior principle may be caused by an

exterior principle; and so to be moved from within is not repugnant to being moved by another.

Reply to Objection 3. If the will were so moved by another as in no way to be moved from within itself, the act of the will would not be imputed for reward or blame. But since its being moved by another does not prevent its being moved from within itself, as we have stated (ad 2), it does not thereby forfeit the motive for merit or demerit.

Whether God works in every agent?

Ia q. 105 a. 5

Objection 1. It would seem that God does not work in every agent. For we must not attribute any insufficiency to God. If therefore God works in every agent, He works sufficiently in each one. Hence it would be superfluous for the created agent to work at all.

Objection 2. Further, the same work cannot proceed at the same time from two sources; as neither can one and the same movement belong to two movable things. Therefore if the creature's operation is from God operating in the creature, it cannot at the same time proceed from the creature; and so no creature works at all.

Objection 3. Further, the maker is the cause of the operation of the thing made, as giving it the form whereby it operates. Therefore, if God is the cause of the operation of things made by Him, this would be inasmuch as He gives them the power of operating. But this is in the beginning, when He makes them. Thus it seems that God does not operate any further in the operating creature.

On the contrary, It is written (Is. 26:12): "Lord, Thou hast wrought all our works in [Vulg.: 'for'] us."

I answer that, Some have understood God to work in every agent in such a way that no created power has any effect in things, but that God alone is the ultimate cause of everything wrought; for instance, that it is not fire that gives heat, but God in the fire, and so forth. But this is impossible. First, because the order of cause and effect would be taken away from created things: and this would imply lack of power in the Creator: for it is due to the power of the cause, that it bestows active power on its effect. Secondly, because the active powers which are seen to exist in things, would be bestowed on things to no purpose, if these wrought nothing through them. Indeed, all things created would seem, in a way, to be purposeless, if they lacked an operation proper to them; since the purpose of everything is its operation. For the less perfect is always for the sake of the more perfect: and consequently as the matter is for the sake of the form, so the form which is the first act, is for the sake of its operation, which is the second act; and thus operation is the end of the creature. We must therefore understand that God works in things in such a manner that things have their proper operation.

In order to make this clear, we must observe that as there are few kinds of causes; matter is not a princi-

ple of action, but is the subject that receives the effect of action. On the other hand, the end, the agent, and the form are principles of action, but in a certain order. For the first principle of action is the end which moves the agent; the second is the agent; the third is the form of that which the agent applies to action (although the agent also acts through its own form); as may be clearly seen in things made by art. For the craftsman is moved to action by the end, which is the thing wrought, for instance a chest or a bed; and applies to action the axe which cuts through its being sharp.

Thus then does God work in every worker, according to these three things. First as an end. For since every operation is for the sake of some good, real or apparent; and nothing is good either really or apparently, except in as far as it participates in a likeness to the Supreme Good, which is God; it follows that God Himself is the cause of every operation as its end. Again it is to be observed that where there are several agents in order, the second always acts in virtue of the first; for the first agent moves the second to act. And thus all agents act in virtue of God Himself: and therefore He is the cause of action in every agent. Thirdly, we must observe that God not only moves things to operated, as it were applying their forms and powers to operation, just as the workman applies the axe to cut, who nevertheless at times does not give the axe its form; but He also gives created agents their forms and preserves them in being. Therefore He is the cause of action not only by giving the form which is the principle of action, as the generator is said to be the cause of movement in things heavy and light; but also as preserving the forms and powers of things; just as the sun is said to be the cause of the manifestation of colors, inasmuch as it gives and preserves the light by which colors are made manifest. And since the form of a thing is within the thing, and all the more, as it approaches nearer to the First and Universal Cause; and because in all things God Himself is properly the cause of universal being which is innermost in all things; it follows that in all things God works intimately. For this reason in Holy Scripture the operations of nature are attributed to God as operating in nature, according to Job 10:11: "Thou hast clothed me with skin and flesh: Thou hast put me together with bones and sinews."

Reply to Objection 1. God works sufficiently in things as First Agent, but it does not follow from this that the operation of secondary agents is superfluous.

Reply to Objection 2. One action does not proceed from two agents of the same order. But nothing hinders the same action from proceeding from a primary and a

secondary agent.

Reply to Objection 3. God not only gives things their form, but He also preserves them in existence, and applies them to act, and is moreover the end of every action, as above explained.

Whether God can do anything outside the established order of nature?

Ia q. 105 a. 6

Objection 1. It would seem that God cannot do anything outside the established order of nature. For Augustine (Contra Faust. xxvi, 3) says: “God the Maker and Creator of each nature, does nothing against nature.” But that which is outside the natural order seems to be against nature. Therefore God can do nothing outside the natural order.

Objection 2. Further, as the order of justice is from God, so is the order of nature. But God cannot do anything outside the order of justice; for then He would do something unjust. Therefore He cannot do anything outside the order of nature.

Objection 3. Further, God established the order of nature. Therefore if God does anything outside the order of nature, it would seem that He is changeable; which cannot be said.

On the contrary, Augustine says (Contra Faust. xxvi, 3): “God sometimes does things which are contrary to the ordinary course of nature.”

I answer that, From each cause there results a certain order to its effects, since every cause is a principle; and so, according to the multiplicity of causes, there results a multiplicity of orders, subjected one to the other, as cause is subjected to cause. Wherefore a higher cause is not subjected to a cause of a lower order; but conversely. An example of this may be seen in human affairs. On the father of a family depends the order of the household; which order is contained in the order of the city; which order again depends on the ruler of the city; while this last order depends on that of the king, by whom the whole kingdom is ordered.

If therefore we consider the order of things depending on the first cause, God cannot do anything against this order; for, if He did so, He would act against His foreknowledge, or His will, or His goodness. But if we consider the order of things depending on any secondary cause, thus God can do something outside such order; for He is not subject to the order of secondary causes; but, on the contrary, this order is subject to Him,

as proceeding from Him, not by a natural necessity, but by the choice of His own will; for He could have created another order of things. Wherefore God can do something outside this order created by Him, when He chooses, for instance by producing the effects of secondary causes without them, or by producing certain effects to which secondary causes do not extend. So Augustine says (Contra Faust. xxvi, 3): “God acts against the wonted course of nature, but by no means does He act against the supreme law; because He does not act against Himself.”

Reply to Objection 1. In natural things something may happen outside this natural order, in two ways. It may happen by the action of an agent which did not give them their natural inclination; as, for example, when a man moves a heavy body upwards, which does not owe to him its natural inclination to move downwards; and that would be against nature. It may also happen by the action of the agent on whom the natural inclination depends; and this is not against nature, as is clear in the ebb and flow of the tide, which is not against nature; although it is against the natural movement of water in a downward direction; for it is owing to the influence of a heavenly body, on which the natural inclination of lower bodies depends. Therefore since the order of nature is given to things by God; if He does anything outside this order, it is not against nature. Wherefore Augustine says (Contra Faust. xxvi, 3): “That is natural to each thing which is caused by Him from Whom is all mode, number, and order in nature.”

Reply to Objection 2. The order of justice arises by relation to the First Cause, Who is the rule of all justice; and therefore God can do nothing against such order.

Reply to Objection 3. God fixed a certain order in things in such a way that at the same time He reserved to Himself whatever he intended to do otherwise than by a particular cause. So when He acts outside this order, He does not change.

Whether whatever God does outside the natural order is miraculous?

Ia q. 105 a. 7

Objection 1. It would seem that not everything which God does outside the natural order of things, is miraculous. For the creation of the world, and of souls, and the justification of the unrighteous, are done by God outside the natural order; as not being accomplished by the action of any natural cause. Yet these things are not

called miracles. Therefore not everything that God does outside the natural order is a miracle.

Objection 2. Further, a miracle is “something difficult, which seldom occurs, surpassing the faculty of nature, and going so far beyond our hopes as to compel

our astonishment”*. But some things outside the order of nature are not arduous; for they occur in small things, such as the recovery and healing of the sick. Nor are they of rare occurrence, since they happen frequently; as when the sick were placed in the streets, to be healed by the shadow of Peter (Acts 5:15). Nor do they surpass the faculty of nature; as when people are cured of a fever. Nor are they beyond our hopes, since we all hope for the resurrection of the dead, which nevertheless will be outside the course of nature. Therefore not all things are outside the course of nature are miraculous.

Objection 3. Further, the word miracle is derived from admiration. Now admiration concerns things manifest to the senses. But sometimes things happen outside the order of nature, which are not manifest to the senses; as when the Apostles were endowed with knowledge without studying or being taught. Therefore not everything that occurs outside the order of nature is miraculous.

On the contrary, Augustine says (Contra Faust. xxvi, 3): “Where God does anything against that order of nature which we know and are accustomed to observe, we call it a miracle.”

I answer that, The word miracle is derived from admiration, which arises when an effect is manifest, whereas its cause is hidden; as when a man sees an eclipse without knowing its cause, as the Philosopher says in the beginning of his *Metaphysics*. Now the cause of a manifest effect may be known to one, but un-

known to others. Wherefore a thing is wonderful to one man, and not at all to others: as an eclipse is to a rustic, but not to an astronomer. Now a miracle is so called as being full of wonder; as having a cause absolutely hidden from all: and this cause is God. Wherefore those things which God does outside those causes which we know, are called miracles.

Reply to Objection 1. Creation, and the justification of the unrighteous, though done by God alone, are not, properly speaking, miracles, because they are not of a nature to proceed from any other cause; so they do not occur outside the order of nature, since they do not belong to that order.

Reply to Objection 2. An arduous thing is called a miracle, not on account of the excellence of the thing wherein it is done, but because it surpasses the faculty of nature: likewise a thing is called unusual, not because it does not often happen, but because it is outside the usual natural course of things. Furthermore, a thing is said to be above the faculty of nature, not only by reason of the substance of the thing done, but also on account of the manner and order in which it is done. Again, a miracle is said to go beyond the hope “of nature;” not above the hope “of grace;” which hope comes from faith, whereby we believe in the future resurrection.

Reply to Objection 3. The knowledge of the Apostles, although not manifest in itself, yet was made manifest in its effect, from which it was shown to be wonderful.

Whether one miracle is greater than another?

Ia q. 105 a. 8

Objection 1. It would seem that one miracle is not greater than another. For Augustine says (Epist. ad Volusian. cxxxvii): “In miraculous deeds, the whole measure of the deed is the power of the doer.” But by the same power of God all miracles are done. Therefore one miracle is not greater than another.

Objection 2. Further, the power of God is infinite. But the infinite exceeds the finite beyond all proportion; and therefore no more reason exists to wonder at one effect thereof than at another. Therefore one miracle is not greater than another.

On the contrary, The Lord says, speaking of miraculous works (Jn. 14:12): “The works that I do, he also shall do, and greater than these shall he do.”

I answer that, Nothing is called a miracle by comparison with the Divine Power; because no action is of any account compared with the power of God, according to Is. 40:15: “Behold the Gentiles are as a drop from a bucket, and are counted as the smallest grain of a balance.” But a thing is called a miracle by comparison with the power of nature which it surpasses. So the more the power of nature is surpassed, the greater

the miracle. Now the power of nature is surpassed in three ways: firstly, in the substance of the deed, for instance, if two bodies occupy the same place, or if the sun goes backwards; or if a human body is glorified: such things nature is absolutely unable to do; and these hold the highest rank among miracles. Secondly, a thing surpasses the power of nature, not in the deed, but in that wherein it is done; as the raising of the dead, and giving sight to the blind, and the like; for nature can give life, but not to the dead; and such hold the second rank in miracles. Thirdly, a thing surpasses nature’s power in the measure and order in which it is done; as when a man is cured of a fever suddenly, without treatment or the usual process of nature; or as when the air is suddenly condensed into rain, by Divine power without a natural cause, as occurred at the prayers of Samuel and Elias; and these hold the lowest place in miracles. Moreover, each of these kinds has various degrees, according to the different ways in which the power of nature is surpassed.

From this is clear how to reply to the objections, arguing as they do from the Divine power.

* St. Augustine, De utilitate credendi xvi.

Objection 1. It would seem that God cannot move the matter immediately to receive the form. For as the Philosopher proves (*Metaph.* vii, *Did.* vi, 8), nothing can bring a form into any particular matter, except that form which is in matter; because, like begets like. But God is not a form in matter. Therefore He cannot cause a form in matter.

Objection 2. Further, any agent inclined to several effects will produce none of them, unless it is determined to a particular one by some other cause; for, as the Philosopher says (*De Anima* iii, 11), a general assertion does not move the mind, except by means of some particular apprehension. But the Divine power is the universal cause of all things. Therefore it cannot produce any particular form, except by means of a particular agent.

Objection 3. As universal being depends on the first universal cause, so determinate being depends on determinate particular causes; as we have seen above (q. 104, a. 2). But the determinate being of a particular thing is from its own form. Therefore the forms of things are produced by God, only by means of particular causes.

On the contrary, It is written (*Gn.* 2:7): “God formed man of the slime of the earth.”

I answer that, God can move matter immediately to form; because whatever is in passive potentiality can be reduced to act by the active power which extends over that potentiality. Therefore, since the Divine power extends over matter, as produced by God, it can be reduced to act by the Divine power: and this is what is meant by matter being moved to a form; for a form is nothing else but the act of matter.

Reply to Objection 1. An effect is assimilated to

the active cause in two ways. First, according to the same species; as man is generated by man, and fire by fire. Secondly, by being virtually contained in the cause; as the form of the effect is virtually contained in its cause: thus animals produced by putrefaction, and plants, and minerals are like the sun and stars, by whose power they are produced. In this way the effect is like its active cause as regards all that over which the power of that cause extends. Now the power of God extends to both matter and form; as we have said above (q. 14, a. 2; q. 44, a. 2); wherefore if a composite thing be produced, it is likened to God by way of a virtual inclusion; or it is likened to the composite generator by a likeness of species. Therefore just as the composite generator can move matter to a form by generating a composite thing like itself; so also can God. But no other form not existing in matter can do this; because the power of no other separate substance extends over matter. Hence angels and demons operate on visible matter; not by imprinting forms in matter, but by making use of corporeal seeds.

Reply to Objection 2. This argument would hold if God were to act of natural necessity. But since He acts by His will and intellect, which knows the particular and not only the universal natures of all forms, it follows that He can determinately imprint this or that form on matter.

Reply to Objection 3. The fact that secondary causes are ordered to determinate effects is due to God; wherefore since God ordains other causes to certain effects He can also produce certain effects by Himself without any other cause.

Objection 1. It would seem that God cannot move a body immediately. For as the mover and the moved must exist simultaneously, as the Philosopher says (Phys. vii, 2), it follows that there must be some contact between the mover and moved. But there can be no contact between God and a body; for Dionysius says (Div. Nom. 1): “There is no contact with God.” Therefore God cannot move a body immediately.

Objection 2. Further, God is the mover unmoved. But such also is the desirable object when apprehended. Therefore God moves as the object of desire and apprehension. But He cannot be apprehended except by the intellect, which is neither a body nor a corporeal power. Therefore God cannot move a body immediately.

Objection 3. Further, the Philosopher proves (Phys. viii, 10) that an infinite power moves instantaneously. But it is impossible for a body to be moved in one instant; for since every movement is between opposites, it follows that two opposites would exist at once in the same subject, which is impossible. Therefore a body cannot be moved immediately by an infinite power. But God’s power is infinite, as we have explained (q. 25, a. 2). Therefore God cannot move a body immediately.

On the contrary, God produced the works of the six days immediately among which is included the movements of bodies, as is clear from Gn. 1:9 “Let the waters be gathered together into one place.” Therefore God alone can move a body immediately.

I answer that, It is erroneous to say that God cannot Himself produce all the determinate effects which are produced by any created cause. Wherefore, since bodies are moved immediately by created causes, we cannot possibly doubt that God can move immediately any bodies whatever. This indeed follows from what is above stated (a. 1). For every movement of any body whatever, either results from a form, as the movements of things heavy and light result from the form which they have from their generating cause, for which reason the generator is called the mover; or else tends to a form, as heating tends to the form of heat. Now it belongs to the same cause, to imprint a form, to dispose to that form, and to give the movement which results from that form; for fire not only generates fire, but it also heats and moves things upwards. Therefore, as God can im-

print form immediately in matter, it follows that He can move any body whatever in respect of any movement whatever.

Reply to Objection 1. There are two kinds of contact; corporeal contact, when two bodies touch each other; and virtual contact, as the cause of sadness is said to touch the one made sad. According to the first kind of contact, God, as being incorporeal, neither touches, nor is touched; but according to virtual contact He touches creatures by moving them; but He is not touched, because the natural power of no creature can reach up to Him. Thus did Dionysius understand the words, “There is no contact with God”; that is, so that God Himself be touched.

Reply to Objection 2. God moves as the object of desire and apprehension; but it does not follow that He always moves as being desired and apprehended by that which is moved; but as being desired and known by Himself; for He does all things for His own goodness.

Reply to Objection 3. The Philosopher (Phys. viii, 10) intends to prove that the power of the first mover is not a power of the first mover “of bulk,” by the following argument. The power of the first mover is infinite (which he proves from the fact that the first mover can move in infinite time). Now an infinite power, if it were a power “of bulk,” would move without time, which is impossible; therefore the infinite power of the first mover must be in something which is not measured by its bulk. Whence it is clear that for a body to be moved without time can only be the result of an infinite power. The reason is that every power of bulk moves in its entirety; since it moves by the necessity of its nature. But an infinite power surpasses out of all proportion any finite power. Now the greater the power of the mover, the greater is the velocity of the movement. Therefore, since a finite power moves in a determinate time, it follows that an infinite power does not move in any time; for between one time and any other time there is some proportion. On the other hand, a power which is not in bulk is the power of an intelligent being, which operates in its effects according to what is fitting to them; and therefore, since it cannot be fitting for a body to be moved without time, it does not follow that it moves without time.

Objection 1. It would seem that God does not immediately move the created intellect. For the action of the intellect is governed by its own subject; since it does not pass into external matter; as stated in *Metaph.* ix, *Did.* viii, 8. But the action of what is moved by another does not proceed from that wherein it is; but from the mover. Therefore the intellect is not moved by another; and so apparently God cannot move the created intellect.

Objection 2. Further, anything which in itself is a sufficient principle of movement, is not moved by another. But the movement of the intellect is its act of understanding; in the sense in which we say that to understand or to feel is a kind of movement, as the Philosopher says (*De Anima* iii, 7). But the intellectual light which is natural to the soul, is a sufficient principle of understanding. Therefore it is not moved by another.

Objection 3. Further, as the senses are moved by the sensible, so the intellect is moved by the intelligible. But God is not intelligible to us, and exceeds the capacity of our intellect. Therefore God cannot move our intellect.

On the contrary, The teacher moves the intellect of the one taught. But it is written (*Ps.* 93:10) that God “teaches man knowledge.” Therefore God moves the human intellect.

I answer that, As in corporeal movement that is called the mover which gives the form that is the principle of movement, so that is said to move the intellect, which is the cause of the form that is the principle of the intellectual operation, called the movement of the intellect. Now there is a twofold principle of intellectual operation in the intelligent being; one which is the intellectual power itself, which principle exists in the one who understands in potentiality; while the other is the principle of actual understanding, namely, the likeness of the thing understood in the one who understands. So a thing is said to move the intellect, whether it gives to him who understands the power of understanding; or

impresses on him the likeness of the thing understood.

Now God moves the created intellect in both ways. For He is the First immaterial Being; and as intellectuality is a result of immateriality, it follows that He is the First intelligent Being. Therefore since in each order the first is the cause of all that follows, we must conclude that from Him proceeds all intellectual power. In like manner, since He is the First Being, and all other beings pre-exist in Him as in their First Cause, it follows that they exist intelligibly in Him, after the mode of His own Nature. For as the intelligible types of everything exist first of all in God, and are derived from Him by other intellects in order that these may actually understand; so also are they derived by creatures that they may subsist. Therefore God so moves the created intellect, inasmuch as He gives it the intellectual power, whether natural, or superadded; and impresses on the created intellect the intelligible species, and maintains and preserves both power and species in existence.

Reply to Objection 1. The intellectual operation is performed by the intellect in which it exists, as by a secondary cause; but it proceeds from God as from its first cause. For by Him the power to understand is given to the one who understands.

Reply to Objection 2. The intellectual light together with the likeness of the thing understood is a sufficient principle of understanding; but it is a secondary principle, and depends upon the First Principle.

Reply to Objection 3. The intelligible object moves our human intellect, so far as, in a way, it impresses on it its own likeness, by means of which the intellect is able to understand it. But the likenesses which God impresses on the created intellect are not sufficient to enable the created intellect to understand Him through His Essence, as we have seen above (q. 12, a. 2; q. 56, a. 3). Hence He moves the created intellect, and yet He cannot be intelligible to it, as we have explained (q. 12, a. 4).

Objection 1. It would seem that God cannot move the created will. For whatever is moved from without, is forced. But the will cannot be forced. Therefore it is not moved from without; and therefore cannot be moved by God.

Objection 2. Further, God cannot make two contradictories to be true at the same time. But this would follow if He moved the will; for to be voluntarily moved means to be moved from within, and not by another. Therefore God cannot move the will.

Objection 3. Further, movement is attributed to the mover rather than to the one moved; wherefore homicide is not ascribed to the stone, but to the thrower. Therefore, if God moves the will, it follows that voluntary actions are not imputed to man for reward or blame. But this is false. Therefore God does not move the will.

On the contrary, It is written (Phil. 2:13): “It is God who worketh in us [Vulgate—‘you’] both to will and to accomplish.”

I answer that, As the intellect is moved by the object and by the Giver of the power of intelligence, as stated above (a. 3), so is the will moved by its object, which is good, and by Him who creates the power of willing. Now the will can be moved by good as its object, but by God alone sufficiently and efficaciously. For nothing can move a movable thing sufficiently unless the active power of the mover surpasses or at least equals the potentiality of the thing movable. Now the potentiality of the will extends to the universal good; for its object is the universal good; just as the object of the intellect is the universal being. But every created good is some particular good; God alone is the univer-

sal good. Whereas He alone fills the capacity of the will, and moves it sufficiently as its object. In like manner the power of willing is caused by God alone. For to will is nothing but to be inclined towards the object of the will, which is universal good. But to incline towards the universal good belongs to the First Mover, to Whom the ultimate end is proportionate; just as in human affairs to him that presides over the community belongs the directing of his subjects to the common weal. Wherefore in both ways it belongs to God to move the will; but especially in the second way by an interior inclination of the will.

Reply to Objection 1. A thing moved by another is forced if moved against its natural inclination; but if it is moved by another giving to it the proper natural inclination, it is not forced; as when a heavy body is made to move downwards by that which produced it, then it is not forced. In like manner God, while moving the will, does not force it, because He gives the will its own natural inclination.

Reply to Objection 2. To be moved voluntarily, is to be moved from within, that is, by an interior principle: yet this interior principle may be caused by an exterior principle; and so to be moved from within is not repugnant to being moved by another.

Reply to Objection 3. If the will were so moved by another as in no way to be moved from within itself, the act of the will would not be imputed for reward or blame. But since its being moved by another does not prevent its being moved from within itself, as we have stated (ad 2), it does not thereby forfeit the motive for merit or demerit.

Objection 1. It would seem that God does not work in every agent. For we must not attribute any insufficiency to God. If therefore God works in every agent, He works sufficiently in each one. Hence it would be superfluous for the created agent to work at all.

Objection 2. Further, the same work cannot proceed at the same time from two sources; as neither can one and the same movement belong to two movable things. Therefore if the creature's operation is from God operating in the creature, it cannot at the same time proceed from the creature; and so no creature works at all.

Objection 3. Further, the maker is the cause of the operation of the thing made, as giving it the form whereby it operates. Therefore, if God is the cause of the operation of things made by Him, this would be inasmuch as He gives them the power of operating. But this is in the beginning, when He makes them. Thus it seems that God does not operate any further in the operating creature.

On the contrary, It is written (Is. 26:12): "Lord, Thou hast wrought all our works in [Vulg.: 'for'] us."

I answer that, Some have understood God to work in every agent in such a way that no created power has any effect in things, but that God alone is the ultimate cause of everything wrought; for instance, that it is not fire that gives heat, but God in the fire, and so forth. But this is impossible. First, because the order of cause and effect would be taken away from created things: and this would imply lack of power in the Creator: for it is due to the power of the cause, that it bestows active power on its effect. Secondly, because the active powers which are seen to exist in things, would be bestowed on things to no purpose, if these wrought nothing through them. Indeed, all things created would seem, in a way, to be purposeless, if they lacked an operation proper to them; since the purpose of everything is its operation. For the less perfect is always for the sake of the more perfect: and consequently as the matter is for the sake of the form, so the form which is the first act, is for the sake of its operation, which is the second act; and thus operation is the end of the creature. We must therefore understand that God works in things in such a manner that things have their proper operation.

In order to make this clear, we must observe that as there are few kinds of causes; matter is not a principle of action, but is the subject that receives the effect of action. On the other hand, the end, the agent, and the form are principles of action, but in a certain order. For the first principle of action is the end which moves the agent; the second is the agent; the third is the form of that which the agent applies to action (although the

agent also acts through its own form); as may be clearly seen in things made by art. For the craftsman is moved to action by the end, which is the thing wrought, for instance a chest or a bed; and applies to action the axe which cuts through its being sharp.

Thus then does God work in every worker, according to these three things. First as an end. For since every operation is for the sake of some good, real or apparent; and nothing is good either really or apparently, except in as far as it participates in a likeness to the Supreme Good, which is God; it follows that God Himself is the cause of every operation as its end. Again it is to be observed that where there are several agents in order, the second always acts in virtue of the first; for the first agent moves the second to act. And thus all agents act in virtue of God Himself: and therefore He is the cause of action in every agent. Thirdly, we must observe that God not only moves things to operated, as it were applying their forms and powers to operation, just as the workman applies the axe to cut, who nevertheless at times does not give the axe its form; but He also gives created agents their forms and preserves them in being. Therefore He is the cause of action not only by giving the form which is the principle of action, as the generator is said to be the cause of movement in things heavy and light; but also as preserving the forms and powers of things; just as the sun is said to be the cause of the manifestation of colors, inasmuch as it gives and preserves the light by which colors are made manifest. And since the form of a thing is within the thing, and all the more, as it approaches nearer to the First and Universal Cause; and because in all things God Himself is properly the cause of universal being which is innermost in all things; it follows that in all things God works intimately. For this reason in Holy Scripture the operations of nature are attributed to God as operating in nature, according to Job 10:11: "Thou hast clothed me with skin and flesh: Thou hast put me together with bones and sinews."

Reply to Objection 1. God works sufficiently in things as First Agent, but it does not follow from this that the operation of secondary agents is superfluous.

Reply to Objection 2. One action does not proceed from two agents of the same order. But nothing hinders the same action from proceeding from a primary and a secondary agent.

Reply to Objection 3. God not only gives things their form, but He also preserves them in existence, and applies them to act, and is moreover the end of every action, as above explained.

Objection 1. It would seem that God cannot do anything outside the established order of nature. For Augustine (*Contra Faust.* xxvi, 3) says: “God the Maker and Creator of each nature, does nothing against nature.” But that which is outside the natural order seems to be against nature. Therefore God can do nothing outside the natural order.

Objection 2. Further, as the order of justice is from God, so is the order of nature. But God cannot do anything outside the order of justice; for then He would do something unjust. Therefore He cannot do anything outside the order of nature.

Objection 3. Further, God established the order of nature. Therefore if God does anything outside the order of nature, it would seem that He is changeable; which cannot be said.

On the contrary, Augustine says (*Contra Faust.* xxvi, 3): “God sometimes does things which are contrary to the ordinary course of nature.”

I answer that, From each cause there results a certain order to its effects, since every cause is a principle; and so, according to the multiplicity of causes, there results a multiplicity of orders, subjected one to the other, as cause is subjected to cause. Wherefore a higher cause is not subjected to a cause of a lower order; but conversely. An example of this may be seen in human affairs. On the father of a family depends the order of the household; which order is contained in the order of the city; which order again depends on the ruler of the city; while this last order depends on that of the king, by whom the whole kingdom is ordered.

If therefore we consider the order of things depending on the first cause, God cannot do anything against this order; for, if He did so, He would act against His foreknowledge, or His will, or His goodness. But if we consider the order of things depending on any secondary cause, thus God can do something outside such order; for He is not subject to the order of secondary causes; but, on the contrary, this order is subject to Him,

as proceeding from Him, not by a natural necessity, but by the choice of His own will; for He could have created another order of things. Wherefore God can do something outside this order created by Him, when He chooses, for instance by producing the effects of secondary causes without them, or by producing certain effects to which secondary causes do not extend. So Augustine says (*Contra Faust.* xxvi, 3): “God acts against the wonted course of nature, but by no means does He act against the supreme law; because He does not act against Himself.”

Reply to Objection 1. In natural things something may happen outside this natural order, in two ways. It may happen by the action of an agent which did not give them their natural inclination; as, for example, when a man moves a heavy body upwards, which does not owe to him its natural inclination to move downwards; and that would be against nature. It may also happen by the action of the agent on whom the natural inclination depends; and this is not against nature, as is clear in the ebb and flow of the tide, which is not against nature; although it is against the natural movement of water in a downward direction; for it is owing to the influence of a heavenly body, on which the natural inclination of lower bodies depends. Therefore since the order of nature is given to things by God; if He does anything outside this order, it is not against nature. Wherefore Augustine says (*Contra Faust.* xxvi, 3): “That is natural to each thing which is caused by Him from Whom is all mode, number, and order in nature.”

Reply to Objection 2. The order of justice arises by relation to the First Cause, Who is the rule of all justice; and therefore God can do nothing against such order.

Reply to Objection 3. God fixed a certain order in things in such a way that at the same time He reserved to Himself whatever he intended to do otherwise than by a particular cause. So when He acts outside this order, He does not change.

Objection 1. It would seem that not everything which God does outside the natural order of things, is miraculous. For the creation of the world, and of souls, and the justification of the unrighteous, are done by God outside the natural order; as not being accomplished by the action of any natural cause. Yet these things are not called miracles. Therefore not everything that God does outside the natural order is a miracle.

Objection 2. Further, a miracle is “something difficult, which seldom occurs, surpassing the faculty of nature, and going so far beyond our hopes as to compel our astonishment”*. But some things outside the order of nature are not arduous; for they occur in small things, such as the recovery and healing of the sick. Nor are they of rare occurrence, since they happen frequently; as when the sick were placed in the streets, to be healed by the shadow of Peter (Acts 5:15). Nor do they surpass the faculty of nature; as when people are cured of a fever. Nor are they beyond our hopes, since we all hope for the resurrection of the dead, which nevertheless will be outside the course of nature. Therefore not all things are outside the course of nature are miraculous.

Objection 3. Further, the word miracle is derived from admiration. Now admiration concerns things manifest to the senses. But sometimes things happen outside the order of nature, which are not manifest to the senses; as when the Apostles were endowed with knowledge without studying or being taught. Therefore not everything that occurs outside the order of nature is miraculous.

On the contrary, Augustine says (Contra Faust. xxvi, 3): “Where God does anything against that order of nature which we know and are accustomed to observe, we call it a miracle.”

I answer that, The word miracle is derived from

admiration, which arises when an effect is manifest, whereas its cause is hidden; as when a man sees an eclipse without knowing its cause, as the Philosopher says in the beginning of his *Metaphysics*. Now the cause of a manifest effect may be known to one, but unknown to others. Wherefore a thing is wonderful to one man, and not at all to others: as an eclipse is to a rustic, but not to an astronomer. Now a miracle is so called as being full of wonder; as having a cause absolutely hidden from all: and this cause is God. Wherefore those things which God does outside those causes which we know, are called miracles.

Reply to Objection 1. Creation, and the justification of the unrighteous, though done by God alone, are not, properly speaking, miracles, because they are not of a nature to proceed from any other cause; so they do not occur outside the order of nature, since they do not belong to that order.

Reply to Objection 2. An arduous thing is called a miracle, not on account of the excellence of the thing wherein it is done, but because it surpasses the faculty of nature: likewise a thing is called unusual, not because it does not often happen, but because it is outside the usual natural course of things. Furthermore, a thing is said to be above the faculty of nature, not only by reason of the substance of the thing done, but also on account of the manner and order in which it is done. Again, a miracle is said to go beyond the hope “of nature,” not above the hope “of grace,” which hope comes from faith, whereby we believe in the future resurrection.

Reply to Objection 3. The knowledge of the Apostles, although not manifest in itself, yet was made manifest in its effect, from which it was shown to be wonderful.

* St. Augustine, *De utilitate credendi* xvi.

Objection 1. It would seem that one miracle is not greater than another. For Augustine says (Epist. ad Volusian. cxxxvii): “In miraculous deeds, the whole measure of the deed is the power of the doer.” But by the same power of God all miracles are done. Therefore one miracle is not greater than another.

Objection 2. Further, the power of God is infinite. But the infinite exceeds the finite beyond all proportion; and therefore no more reason exists to wonder at one effect thereof than at another. Therefore one miracle is not greater than another.

On the contrary, The Lord says, speaking of miraculous works (Jn. 14:12): “The works that I do, he also shall do, and greater than these shall he do.”

I answer that, Nothing is called a miracle by comparison with the Divine Power; because no action is of any account compared with the power of God, according to Is. 40:15: “Behold the Gentiles are as a drop from a bucket, and are counted as the smallest grain of a balance.” But a thing is called a miracle by comparison with the power of nature which it surpasses. So the more the power of nature is surpassed, the greater

the miracle. Now the power of nature is surpassed in three ways: firstly, in the substance of the deed, for instance, if two bodies occupy the same place, or if the sun goes backwards; or if a human body is glorified: such things nature is absolutely unable to do; and these hold the highest rank among miracles. Secondly, a thing surpasses the power of nature, not in the deed, but in that wherein it is done; as the raising of the dead, and giving sight to the blind, and the like; for nature can give life, but not to the dead; and such hold the second rank in miracles. Thirdly, a thing surpasses nature’s power in the measure and order in which it is done; as when a man is cured of a fever suddenly, without treatment or the usual process of nature; or as when the air is suddenly condensed into rain, by Divine power without a natural cause, as occurred at the prayers of Samuel and Elias; and these hold the lowest place in miracles. Moreover, each of these kinds has various degrees, according to the different ways in which the power of nature is surpassed.

From this is clear how to reply to the objections, arguing as they do from the Divine power.

FIRST PART, QUESTION 106

How One Creature Moves Another (In Four Articles)

We next consider how one creature moves another. This consideration will be threefold: (1) How the angels move, who are purely spiritual creatures; (2) How bodies move; (3) How man moves, who is composed of a spiritual and a corporeal nature.

Concerning the first point, there are three things to be considered: (1) How an angel acts on an angel; (2) How an angel acts on a corporeal nature; (3) How an angel acts on man.

The first of these raises the question of the enlightenment and speech of the angels; and of their mutual coordination, both of the good and of the bad angels.

Concerning their enlightenment there are four points of inquiry:

- (1) Whether one angel moves the intellect of another by enlightenment?
- (2) Whether one angel moves the will of another?
- (3) Whether an inferior angel can enlighten a superior angel?
- (4) Whether a superior angel enlightens an inferior angel in all that he knows himself?

Whether one angel enlightens another?

Ia q. 106 a. 1

Objection 1. It would seem that one angel does not enlighten another. For the angels possess now the same beatitude which we hope to obtain. But one man will not then enlighten another, according to Jer. 31:34: “They shall teach no more every man his neighbor, and every man his brother.” Therefore neither does an angel enlighten another now.

Objection 2. Further, light in the angels is threefold; of nature, of grace, and of glory. But an angel is enlightened in the light of nature by the Creator; in the light of grace by the Justifier; in the light of glory by the Beatifier; all of which comes from God. Therefore one angel does not enlighten another.

Objection 3. Further, light is a form in the mind. But the rational mind is “informed by God alone, without created intervention,” as Augustine says (QQ. 83, qu. 51). Therefore one angel does not enlighten the mind of another.

On the contrary, Dionysius says (Coel. Hier. viii) that “the angels of the second hierarchy are cleansed, enlightened and perfected by the angels of the first hierarchy.”

I answer that, One angel enlightens another. To make this clear, we must observe that intellectual light is nothing else than a manifestation of truth, according to Eph. 5:13: “All that is made manifest is light.” Hence to enlighten means nothing else but to communicate to others the manifestation of the known truth; according to the Apostle (Eph. 3:8): “To me the least of all the saints is given this grace...to enlighten all men, that they may see what is the dispensation of the mystery which hath been hidden from eternity in God.” Therefore one angel is said to enlighten another by manifesting the truth which he knows himself. Hence Dionysius says (Coel. Hier. vii): “Theologians plainly show that the orders of the heavenly beings are taught Divine science by the higher minds.”

Now since two things concur in the intellectual operation, as we have said (q. 105, a. 3), namely, the intellectual power, and the likeness of the thing understood; in both of these one angel can notify the known truth to another. First, by strengthening his intellectual power; for just as the power of an imperfect body is strengthened by the neighborhood of a more perfect body—for instance, the less hot is made hotter by the presence of what is hotter; so the intellectual power of an inferior angel is strengthened by the superior angel turning to him: since in spiritual things, for one thing to turn to another, corresponds to neighborhood in corporeal things. Secondly, one angel manifests the truth to another as regards the likeness of the thing understood. For the superior angel receives the knowledge of truth by a kind of universal conception, to receive which the inferior angel’s intellect is not sufficiently powerful, for it is natural to him to receive truth in a more particular manner. Therefore the superior angel distinguishes, in a way, the truth which he conceives universally, so that it can be grasped by the inferior angel; and thus he proposes it to his knowledge. Thus it is with us that the teacher, in order to adapt himself to others, divides into many points the knowledge which he possesses in the universal. This is thus expressed by Dionysius (Coel. Hier. xv): “Every intellectual substance with provident power divides and multiplies the uniform knowledge bestowed on it by one nearer to God, so as to lead its inferiors upwards by analogy.”

Reply to Objection 1. All the angels, both inferior and superior, see the Essence of God immediately, and in this respect one does not teach another. It is of this truth that the prophet speaks; wherefore he adds: “They shall teach no more every man his brother, saying: ‘Know the Lord’: for all shall know Me, from the least of them even to the greatest.” But all the types of the Divine works, which are known in God as in their

cause, God knows in Himself, because He comprehends Himself; but of others who see God, each one knows the more types, the more perfectly he sees God. Hence a superior angel knows more about the types of the Divine works than an inferior angel, and concerning these the former enlightens the latter; and as to this Dionysius says (Div. Nom. iv) that the angels “are enlightened by the types of existing things.”

Reply to Objection 2. An angel does not enlighten another by giving him the light of nature, grace, or glory; but by strengthening his natural light, and by

manifesting to him the truth concerning the state of nature, of grace, and of glory, as explained above.

Reply to Objection 3. The rational mind is formed immediately by God, either as the image from the exemplar, forasmuch as it is made to the image of God alone; or as the subject by the ultimate perfecting form: for the created mind is always considered to be unformed, except it adhere to the first truth; while the other kinds of enlightenment that proceed from man or angel, are, as it were, dispositions to this ultimate form.

Whether one angel moves another angel’s will?

Ia q. 106 a. 2

Objection 1. It would seem that one angel can move another angel’s will. Because, according to Dionysius quoted above (a. 1), as one angel enlightens another, so does he cleanse and perfect another. But cleansing and perfecting seem to belong to the will: for the former seems to point to the stain of sin which appertains to will; while to be perfected is to obtain an end, which is the object of the will. Therefore an angel can move another angel’s will.

Objection 2. Further, as Dionysius says (Coel. Hier. vii): “The names of the angels designate their properties.” Now the Seraphim are so called because they “kindle” or “give heat”: and this is by love which belongs to the will. Therefore one angel moves another angel’s will.

Objection 3. Further, the Philosopher says (De Anima iii, 11) that the higher appetite moves the lower. But as the intellect of the superior angel is higher, so also is his will. It seems, therefore, that the superior angel can change the will of another angel.

On the contrary, To him it belongs to change the will, to whom it belongs to bestow righteousness: for righteousness is the rightness of the will. But God alone bestows righteousness. Therefore one angel cannot change another angel’s will.

I answer that, As was said above (q. 105, a. 4), the will is changed in two ways; on the part of the object, and on the part of the power. On the part of the object, both the good itself which is the object of the will, moves the will, as the appetible moves the appetite; and he who points out the object, as, for instance, one who proves something to be good. But as we have said above (q. 105, a. 4), other goods in a measure incline the will, yet nothing sufficiently moves the will save the universal good, and that is God. And this good He alone shows, that it may be seen by the blessed, Who, when Moses asked: “Show me Thy glory,” answered: “I will show thee all good” (Ex. 33:18,19). Therefore an angel does not move the will sufficiently, either as the object or as showing the object. But he inclines the will as something lovable, and as manifesting some created

good ordered to God’s goodness. And thus he can incline the will to the love of the creature or of God, by way of persuasion.

But on the part of the power the will cannot be moved at all save by God. For the operation of the will is a certain inclination of the willer to the thing willed. And He alone can change this inclination, Who bestowed on the creature the power to will: just as that agent alone can change the natural inclination, which can give the power to which follows that natural inclination. Now God alone gave to the creature the power to will, because He alone is the author of the intellectual nature. Therefore an angel cannot move another angel’s will.

Reply to Objection 1. Cleansing and perfecting are to be understood according to the mode of enlightenment. And since God enlightens by changing the intellect and will, He cleanses by removing defects of intellect and will, and perfects unto the end of the intellect and will. But the enlightenment caused by an angel concerns the intellect, as explained above (a. 1); therefore an angel is to be understood as cleansing from the defect of nescience in the intellect; and as perfecting unto the consummate end of the intellect, and this is the knowledge of truth. Thus Dionysius says (Eccl. Hier. vi): that “in the heavenly hierarchy the chastening of the inferior essence is an enlightening of things unknown, that leads them to more perfect knowledge.” For instance, we might say that corporeal sight is cleansed by the removal of darkness; enlightened by the diffusion of light; and perfected by being brought to the perception of the colored object.

Reply to Objection 2. One angel can induce another to love God by persuasion as explained above.

Reply to Objection 3. The Philosopher speaks of the lower sensitive appetite which can be moved by the superior intellectual appetite, because it belongs to the same nature of the soul, and because the inferior appetite is a power in a corporeal organ. But this does not apply to the angels.

Objection 1. It would seem that an inferior angel can enlighten a superior angel. For the ecclesiastical hierarchy is derived from, and represents the heavenly hierarchy; and hence the heavenly Jerusalem is called “our mother” (Gal. 4:26). But in the Church even superiors are enlightened and taught by their inferiors, as the Apostle says (1 Cor. 14:31): “You may all prophesy one by one, that all may learn and all may be exhorted.” Therefore, likewise in the heavenly hierarchy, the superiors can be enlightened by inferiors.

Objection 2. Further, as the order of corporeal substances depends on the will of God, so also does the order of spiritual substances. But, as was said above (q. 105, a. 6), God sometimes acts outside the order of corporeal substances. Therefore He also sometimes acts outside the order of spiritual substances, by enlightening inferior otherwise than through their superiors. Therefore in that way the inferiors enlightened by God can enlighten superiors.

Objection 3. Further, one angel enlightens the other to whom he turns, as was above explained (a. 1). But since this turning to another is voluntary, the highest angel can turn to the lowest passing over the others. Therefore he can enlighten him immediately; and thus the latter can enlighten his superiors.

On the contrary, Dionysius says that “this is the Divine unalterable law, that inferior things are led to God by the superior” (Coel. Hier. iv; Eccl. Hier. v).

I answer that, The inferior angels never enlighten the superior, but are always enlightened by them. The reason is, because, as above explained (q. 105, a. 6), one order is under another, as cause is under cause; and hence as cause is ordered to cause, so is order to order. Therefore there is no incongruity if sometimes anything

is done outside the order of the inferior cause, to be ordered to the superior cause, as in human affairs the command of the president is passed over from obedience to the prince. So it happens that God works miraculously outside the order of corporeal nature, that men may be ordered to the knowledge of Him. But the passing over of the order that belongs to spiritual substances in no way belongs to the ordering of men to God; since the angelic operations are not made known to us; as are the operations of sensible bodies. Thus the order which belongs to spiritual substances is never passed over by God; so that the inferiors are always moved by the superior, and not conversely.

Reply to Objection 1. The ecclesiastical hierarchy imitates the heavenly in some degree, but by a perfect likeness. For in the heavenly hierarchy the perfection of the order is in proportion to its nearness to God; so that those who are the nearer to God are the more sublime in grade, and more clear in knowledge; and on that account the superiors are never enlightened by the inferiors, whereas in the ecclesiastical hierarchy, sometimes those who are the nearer to God in sanctity, are in the lowest grade, and are not conspicuous for science; and some also are eminent in one kind of science, and fail in another; and on that account superiors may be taught by inferiors.

Reply to Objection 2. As above explained, there is no similarity between what God does outside the order of corporeal nature, and that of spiritual nature. Hence the argument does not hold.

Reply to Objection 3. An angel turns voluntarily to enlighten another angel, but the angel’s will is ever regulated by the Divine law which made the order in the angels.

Objection 1. It would seem that the superior angel does not enlighten the inferior concerning all he himself knows. For Dionysius says (Coel. Hier. xii) that the superior angels have a more universal knowledge; and the inferior a more particular and individual knowledge. But more is contained under a universal knowledge than under a particular knowledge. Therefore not all that the superior angels know, is known by the inferior, through these being enlightened by the former.

Objection 2. Further, the Master of the Sentences (ii, D, 11) says that the superior angels had long known the Mystery of the Incarnation, whereas the inferior angels did not know it until it was accomplished. Thus we find that on some of the angels inquiring, as it were, in ignorance: “Who is this King of glory?” other angels, who knew, answered: “The Lord of Hosts, He is the King of glory,” as Dionysius expounds (Coel. Hier. vii).

But this would not apply if the superior angels enlightened the inferior concerning all they know themselves. Therefore they do not do so.

Objection 3. Further, if the superior angels enlighten the inferior about all they know, nothing that the superior angels know would be unknown to the inferior angels. Therefore the superior angels could communicate nothing more to the inferior; which appears open to objection. Therefore the superior angels enlighten the inferior in all things.

On the contrary, Gregory* says: “In that heavenly country, though there are some excellent gifts, yet nothing is held individually.” And Dionysius says: “Each heavenly essence communicates to the inferior the gift derived from the superior” (Coel. Hier. xv), as quoted above (a. 1).

I answer that, Every creature participates in the Di-

* Peter Lombard, Sent. ii, D, ix; Cf. Gregory, Hom. xxxiv, in Ev.

vine goodness, so as to diffuse the good it possesses to others; for it is of the nature of good to communicate itself to others. Hence also corporeal agents give their likeness to others so far as they can. So the more an agent is established in the share of the Divine goodness, so much the more does it strive to transmit its perfections to others as far as possible. Hence the Blessed Peter admonishes those who by grace share in the Divine goodness; saying: "As every man hath received grace, ministering the same one to another; as good stewards of the manifold grace of God" (1 Pet. 4:10). Much more therefore do the holy angels, who enjoy the plenitude of participation of the Divine goodness, impart the same to those below them.

Nevertheless this gift is not received so excellently by the inferior as by the superior angels; and therefore the superior ever remain in a higher order, and have a

more perfect knowledge; as the master understands the same thing better than the pupil who learns from him.

Reply to Objection 1. The knowledge of the superior angels is said to be more universal as regards the more eminent mode of knowledge.

Reply to Objection 2. The Master's words are not to be understood as if the inferior angels were entirely ignorant of the Mystery of the Incarnation but that they did not know it as fully as the superior angels; and that they progressed in the knowledge of it afterwards when the Mystery was accomplished.

Reply to Objection 3. Till the Judgment Day some new things are always being revealed by God to the highest angels, concerning the course of the world, and especially the salvation of the elect. Hence there is always something for the superior angels to make known to the inferior.

Objection 1. It would seem that one angel does not enlighten another. For the angels possess now the same beatitude which we hope to obtain. But one man will not then enlighten another, according to Jer. 31:34: “They shall teach no more every man his neighbor, and every man his brother.” Therefore neither does an angel enlighten another now.

Objection 2. Further, light in the angels is three-fold; of nature, of grace, and of glory. But an angel is enlightened in the light of nature by the Creator; in the light of grace by the Justifier; in the light of glory by the Beatifier; all of which comes from God. Therefore one angel does not enlighten another.

Objection 3. Further, light is a form in the mind. But the rational mind is “informed by God alone, without created intervention,” as Augustine says (QQ. 83, qu. 51). Therefore one angel does not enlighten the mind of another.

On the contrary, Dionysius says (Coel. Hier. viii) that “the angels of the second hierarchy are cleansed, enlightened and perfected by the angels of the first hierarchy.”

I answer that, One angel enlightens another. To make this clear, we must observe that intellectual light is nothing else than a manifestation of truth, according to Eph. 5:13: “All that is made manifest is light.” Hence to enlighten means nothing else but to communicate to others the manifestation of the known truth; according to the Apostle (Eph. 3:8): “To me the least of all the saints is given this grace... to enlighten all men, that they may see what is the dispensation of the mystery which hath been hidden from eternity in God.” Therefore one angel is said to enlighten another by manifesting the truth which he knows himself. Hence Dionysius says (Coel. Hier. vii): “Theologians plainly show that the orders of the heavenly beings are taught Divine science by the higher minds.”

Now since two things concur in the intellectual operation, as we have said (q. 105, a. 3), namely, the intellectual power, and the likeness of the thing understood; in both of these one angel can notify the known truth to another. First, by strengthening his intellectual power; for just as the power of an imperfect body is strengthened by the neighborhood of a more perfect body—for instance, the less hot is made hotter by the presence of what is hotter; so the intellectual power of an inferior angel is strengthened by the superior angel turning to him: since in spiritual things, for one thing to turn to an-

other, corresponds to neighborhood in corporeal things. Secondly, one angel manifests the truth to another as regards the likeness of the thing understood. For the superior angel receives the knowledge of truth by a kind of universal conception, to receive which the inferior angel’s intellect is not sufficiently powerful, for it is natural to him to receive truth in a more particular manner. Therefore the superior angel distinguishes, in a way, the truth which he conceives universally, so that it can be grasped by the inferior angel; and thus he proposes it to his knowledge. Thus it is with us that the teacher, in order to adapt himself to others, divides into many points the knowledge which he possesses in the universal. This is thus expressed by Dionysius (Coel. Hier. xv): “Every intellectual substance with provident power divides and multiplies the uniform knowledge bestowed on it by one nearer to God, so as to lead its inferiors upwards by analogy.”

Reply to Objection 1. All the angels, both inferior and superior, see the Essence of God immediately, and in this respect one does not teach another. It is of this truth that the prophet speaks; wherefore he adds: “They shall teach no more every man his brother, saying: ‘Know the Lord’: for all shall know Me, from the least of them even to the greatest.” But all the types of the Divine works, which are known in God as in their cause, God knows in Himself, because He comprehends Himself; but of others who see God, each one knows the more types, the more perfectly he sees God. Hence a superior angel knows more about the types of the Divine works than an inferior angel, and concerning these the former enlightens the latter; and as to this Dionysius says (Div. Nom. iv) that the angels “are enlightened by the types of existing things.”

Reply to Objection 2. An angel does not enlighten another by giving him the light of nature, grace, or glory; but by strengthening his natural light, and by manifesting to him the truth concerning the state of nature, of grace, and of glory, as explained above.

Reply to Objection 3. The rational mind is formed immediately by God, either as the image from the exemplar, forasmuch as it is made to the image of God alone; or as the subject by the ultimate perfecting form: for the created mind is always considered to be unformed, except it adhere to the first truth; while the other kinds of enlightenment that proceed from man or angel, are, as it were, dispositions to this ultimate form.

Objection 1. It would seem that one angel can move another angel's will. Because, according to Dionysius quoted above (a. 1), as one angel enlightens another, so does he cleanse and perfect another. But cleansing and perfecting seem to belong to the will: for the former seems to point to the stain of sin which appertains to will; while to be perfected is to obtain an end, which is the object of the will. Therefore an angel can move another angel's will.

Objection 2. Further, as Dionysius says (Coel. Hier. vii): "The names of the angels designate their properties." Now the Seraphim are so called because they "kindle" or "give heat": and this is by love which belongs to the will. Therefore one angel moves another angel's will.

Objection 3. Further, the Philosopher says (De Anima iii, 11) that the higher appetite moves the lower. But as the intellect of the superior angel is higher, so also is his will. It seems, therefore, that the superior angel can change the will of another angel.

On the contrary, To him it belongs to change the will, to whom it belongs to bestow righteousness: for righteousness is the rightness of the will. But God alone bestows righteousness. Therefore one angel cannot change another angel's will.

I answer that, As was said above (q. 105, a. 4), the will is changed in two ways; on the part of the object, and on the part of the power. On the part of the object, both the good itself which is the object of the will, moves the will, as the appetible moves the appetite; and he who points out the object, as, for instance, one who proves something to be good. But as we have said above (q. 105, a. 4), other goods in a measure incline the will, yet nothing sufficiently moves the will save the universal good, and that is God. And this good He alone shows, that it may be seen by the blessed, Who, when Moses asked: "Show me Thy glory," answered: "I will show thee all good" (Ex. 33:18,19). Therefore an angel does not move the will sufficiently, either as the object or as showing the object. But he inclines the will as something lovable, and as manifesting some created

good ordered to God's goodness. And thus he can incline the will to the love of the creature or of God, by way of persuasion.

But on the part of the power the will cannot be moved at all save by God. For the operation of the will is a certain inclination of the willer to the thing willed. And He alone can change this inclination, Who bestowed on the creature the power to will: just as that agent alone can change the natural inclination, which can give the power to which follows that natural inclination. Now God alone gave to the creature the power to will, because He alone is the author of the intellectual nature. Therefore an angel cannot move another angel's will.

Reply to Objection 1. Cleansing and perfecting are to be understood according to the mode of enlightenment. And since God enlightens by changing the intellect and will, He cleanses by removing defects of intellect and will, and perfects unto the end of the intellect and will. But the enlightenment caused by an angel concerns the intellect, as explained above (a. 1); therefore an angel is to be understood as cleansing from the defect of nescience in the intellect; and as perfecting unto the consummate end of the intellect, and this is the knowledge of truth. Thus Dionysius says (Eccl. Hier. vi): that "in the heavenly hierarchy the chastening of the inferior essence is an enlightening of things unknown, that leads them to more perfect knowledge." For instance, we might say that corporeal sight is cleansed by the removal of darkness; enlightened by the diffusion of light; and perfected by being brought to the perception of the colored object.

Reply to Objection 2. One angel can induce another to love God by persuasion as explained above.

Reply to Objection 3. The Philosopher speaks of the lower sensitive appetite which can be moved by the superior intellectual appetite, because it belongs to the same nature of the soul, and because the inferior appetite is a power in a corporeal organ. But this does not apply to the angels.

Objection 1. It would seem that an inferior angel can enlighten a superior angel. For the ecclesiastical hierarchy is derived from, and represents the heavenly hierarchy; and hence the heavenly Jerusalem is called “our mother” (Gal. 4:26). But in the Church even superiors are enlightened and taught by their inferiors, as the Apostle says (1 Cor. 14:31): “You may all prophesy one by one, that all may learn and all may be exhorted.” Therefore, likewise in the heavenly hierarchy, the superiors can be enlightened by inferiors.

Objection 2. Further, as the order of corporeal substances depends on the will of God, so also does the order of spiritual substances. But, as was said above (q. 105, a. 6), God sometimes acts outside the order of corporeal substances. Therefore He also sometimes acts outside the order of spiritual substances, by enlightening inferior otherwise than through their superiors. Therefore in that way the inferiors enlightened by God can enlighten superiors.

Objection 3. Further, one angel enlightens the other to whom he turns, as was above explained (a. 1). But since this turning to another is voluntary, the highest angel can turn to the lowest passing over the others. Therefore he can enlighten him immediately; and thus the latter can enlighten his superiors.

On the contrary, Dionysius says that “this is the Divine unalterable law, that inferior things are led to God by the superior” (Coel. Hier. iv; Eccl. Hier. v).

I answer that, The inferior angels never enlighten the superior, but are always enlightened by them. The reason is, because, as above explained (q. 105, a. 6), one order is under another, as cause is under cause; and hence as cause is ordered to cause, so is order to order. Therefore there is no incongruity if sometimes anything

is done outside the order of the inferior cause, to be ordered to the superior cause, as in human affairs the command of the president is passed over from obedience to the prince. So it happens that God works miraculously outside the order of corporeal nature, that men may be ordered to the knowledge of Him. But the passing over of the order that belongs to spiritual substances in no way belongs to the ordering of men to God; since the angelic operations are not made known to us; as are the operations of sensible bodies. Thus the order which belongs to spiritual substances is never passed over by God; so that the inferiors are always moved by the superior, and not conversely.

Reply to Objection 1. The ecclesiastical hierarchy imitates the heavenly in some degree, but by a perfect likeness. For in the heavenly hierarchy the perfection of the order is in proportion to its nearness to God; so that those who are the nearer to God are the more sublime in grade, and more clear in knowledge; and on that account the superiors are never enlightened by the inferiors, whereas in the ecclesiastical hierarchy, sometimes those who are the nearer to God in sanctity, are in the lowest grade, and are not conspicuous for science; and some also are eminent in one kind of science, and fail in another; and on that account superiors may be taught by inferiors.

Reply to Objection 2. As above explained, there is no similarity between what God does outside the order of corporeal nature, and that of spiritual nature. Hence the argument does not hold.

Reply to Objection 3. An angel turns voluntarily to enlighten another angel, but the angel’s will is ever regulated by the Divine law which made the order in the angels.

Objection 1. It would seem that the superior angel does not enlighten the inferior concerning all he himself knows. For Dionysius says (Coel. Hier. xii) that the superior angels have a more universal knowledge; and the inferior a more particular and individual knowledge. But more is contained under a universal knowledge than under a particular knowledge. Therefore not all that the superior angels know, is known by the inferior, through these being enlightened by the former.

Objection 2. Further, the Master of the Sentences (ii, D, 11) says that the superior angels had long known the Mystery of the Incarnation, whereas the inferior angels did not know it until it was accomplished. Thus we find that on some of the angels inquiring, as it were, in ignorance: "Who is this King of glory?" other angels, who knew, answered: "The Lord of Hosts, He is the King of glory," as Dionysius expounds (Coel. Hier. vii). But this would not apply if the superior angels enlightened the inferior concerning all they know themselves. Therefore they do not do so.

Objection 3. Further, if the superior angels enlighten the inferior about all they know, nothing that the superior angels know would be unknown to the inferior angels. Therefore the superior angels could communicate nothing more to the inferior; which appears open to objection. Therefore the superior angels enlighten the inferior in all things.

On the contrary, Gregory* says: "In that heavenly country, though there are some excellent gifts, yet nothing is held individually." And Dionysius says: "Each heavenly essence communicates to the inferior the gift derived from the superior" (Coel. Hier. xv), as quoted above (a. 1).

I answer that, Every creature participates in the Di-

vine goodness, so as to diffuse the good it possesses to others; for it is of the nature of good to communicate itself to others. Hence also corporeal agents give their likeness to others so far as they can. So the more an agent is established in the share of the Divine goodness, so much the more does it strive to transmit its perfections to others as far as possible. Hence the Blessed Peter admonishes those who by grace share in the Divine goodness; saying: "As every man hath received grace, ministering the same one to another; as good stewards of the manifold grace of God" (1 Pet. 4:10). Much more therefore do the holy angels, who enjoy the plenitude of participation of the Divine goodness, impart the same to those below them.

Nevertheless this gift is not received so excellently by the inferior as by the superior angels; and therefore the superior ever remain in a higher order, and have a more perfect knowledge; as the master understands the same thing better than the pupil who learns from him.

Reply to Objection 1. The knowledge of the superior angels is said to be more universal as regards the more eminent mode of knowledge.

Reply to Objection 2. The Master's words are not to be understood as if the inferior angels were entirely ignorant of the Mystery of the Incarnation but that they did not know it as fully as the superior angels; and that they progressed in the knowledge of it afterwards when the Mystery was accomplished.

Reply to Objection 3. Till the Judgment Day some new things are always being revealed by God to the highest angels, concerning the course of the world, and especially the salvation of the elect. Hence there is always something for the superior angels to make known to the inferior.

* Peter Lombard, Sent. ii, D, ix; Cf. Gregory, Hom. xxxiv, in Ev.

FIRST PART, QUESTION 107

The Speech of the Angels (In Five Articles)

We next consider the speech of the angels. Here there are five points of inquiry:

- (1) Whether one angel speaks to another?
- (2) Whether the inferior speaks to the superior?
- (3) Whether an angel speaks to God?
- (4) Whether the angelic speech is subject to local distance?
- (5) Whether all the speech of one angel to another is known to all?

Whether one angel speaks to another?

Ia q. 107 a. 1

Objection 1. It would seem that one angel does not speak to another. For Gregory says (Moral. xviii) that, in the state of the resurrection “each one’s body will not hide his mind from his fellows.” Much less, therefore, is one angel’s mind hidden from another. But speech manifests to another what lies hidden in the mind. Therefore it is not necessary that one angel should speak to another.

Objection 2. Further, speech is twofold; interior, whereby one speaks to oneself; and exterior, whereby one speaks to another. But exterior speech takes place by some sensible sign, as by voice, or gesture, or some bodily member, as the tongue, or the fingers, and this cannot apply to the angels. Therefore one angel does not speak to another.

Objection 3. Further, the speaker incites the hearer to listen to what he says. But it does not appear that one angel incites another to listen; for this happens among us by some sensible sign. Therefore one angel does not speak to another.

On the contrary, The Apostle says (1 Cor. 13:1): “If I speak with the tongues of men and of angels.”

I answer that, The angels speak in a certain way. But, as Gregory says (Moral. ii): “It is fitting that our mind, rising above the properties of bodily speech, should be lifted to the sublime and unknown methods of interior speech.”

To understand how one angel speaks to another, we must consider that, as we explained above (q. 82, a. 4), when treating of the actions and powers of the soul, the will moves the intellect to its operation. Now an intelligible object is present to the intellect in three ways; first, habitually, or in the memory, as Augustine says (De Trin. xiv, 6,7); secondly, as actually considered or conceived; thirdly, as related to something else. And it is clear that the intelligible object passes from the first to the second stage by the command of the will, and hence in the definition of habit these words occur, “which anyone uses when he wills.” So likewise the intelligible object passes from the second to the third stage by the will; for by the will the concept of the mind is ordered to something else, as, for instance, either to the performing of an action, or to being made known to another.

Now when the mind turns itself to the actual consideration of any habitual knowledge, then a person speaks to himself; for the concept of the mind is called “the interior word.” And by the fact that the concept of the angelic mind is ordered to be made known to another by the will of the angel himself, the concept of one angel is made known to another; and in this way one angel speaks to another; for to speak to another only means to make known the mental concept to another.

Reply to Objection 1. Our mental concept is hidden by a twofold obstacle. The first is in the will, which can retain the mental concept within, or can direct it externally. In this way God alone can see the mind of another, according to 1 Cor. 2:11: “What man knoweth the things of a man, but the spirit of a man that is in him?” The other obstacle whereby the mental concept is excluded from another one’s knowledge, comes from the body; and so it happens that even when the will directs the concept of the mind to make itself known, it is not at once made known to another; but some sensible sign must be used. Gregory alludes to this fact when he says (Moral. ii): “To other eyes we seem to stand aloof as it were behind the wall of the body; and when we wish to make ourselves known, we go out as it were by the door of the tongue to show what we really are.” But an angel is under no such obstacle, and so he can make his concept known to another at once.

Reply to Objection 2. External speech, made by the voice, is a necessity for us on account of the obstacle of the body. Hence it does not befit an angel; but only interior speech belongs to him, and this includes not only the interior speech by mental concept, but also its being ordered to another’s knowledge by the will. So the tongue of an angel is called metaphorically the angel’s power, whereby he manifests his mental concept.

Reply to Objection 3. There is no need to draw the attention of the good angels, inasmuch as they always see each other in the Word; for as one ever sees the other, so he ever sees what is ordered to himself. But because by their very nature they can speak to each other, and even now the bad angels speak to each other, we must say that the intellect is moved by the intelligible object just as sense is affected by the sensible object.

Therefore, as sense is aroused by the sensible object, so the mind of an angel can be aroused to attention by some intelligible power.

Whether the inferior angel speaks to the superior?

Ia q. 107 a. 2

Objection 1. It would seem that the inferior angel does not speak to the superior. For on the text (1 Cor. 13:1), “If I speak with the tongues of men and of angels,” a gloss remarks that the speech of the angels is an enlightenment whereby the superior enlightens the inferior. But the inferior never enlightens the superior, as was above explained (q. 106, a. 3). Therefore neither do the inferior speak to the superior.

Objection 2. Further, as was said above (q. 106, a. 1), to enlighten means merely to acquaint one man of what is known to another; and this is to speak. Therefore to speak and to enlighten are the same; so the same conclusion follows.

Objection 3. Further, Gregory says (Moral. ii): “God speaks to the angels by the very fact that He shows to their hearts His hidden and invisible things.” But this is to enlighten them. Therefore, whenever God speaks, He enlightens. In the same way every angelic speech is an enlightening. Therefore an inferior angel can in no way speak to a superior angel.

On the contrary, According to the exposition of Dionysius (Coel. Hier. vii), the inferior angels said to the superior: “Who is this King of Glory?”

I answer that, The inferior angels can speak to the superior. To make this clear, we must consider that every angelic enlightening is an angelic speech; but on the other hand, not every speech is an enlightening; because, as we have said (a. 1), for one angel to speak to another angel means nothing else, but that by his own will he directs his mental concept in such a way, that it becomes known to the other. Now what the mind conceives may be reduced to a twofold principle; to God Himself, Who is the primal truth; and to the will of the one who understands, whereby we actually consider

anything. But because truth is the light of the intellect, and God Himself is the rule of all truth; the manifestation of what is conceived by the mind, as depending on the primary truth, is both speech and enlightenment; for example, when one man says to another: “Heaven was created by God”; or, “Man is an animal.” The manifestation, however, of what depends on the will of the one who understands, cannot be called an enlightenment, but is only a speech; for instance, when one says to another: “I wish to learn this; I wish to do this or that.” The reason is that the created will is not a light, nor a rule of truth; but participates of light. Hence to communicate what comes from the created will is not, as such, an enlightening. For to know what you may will, or what you may understand does not belong to the perfection of my intellect; but only to know the truth in reality.

Now it is clear that the angels are called superior or inferior by comparison with this principle, God; and therefore enlightenment, which depends on the principle which is God, is conveyed only by the superior angels to the inferior. But as regards the will as the principle, he who wills is first and supreme; and therefore the manifestation of what belongs to the will, is conveyed to others by the one who wills. In that manner both the superior angels speak to the inferior, and the inferior speak to the superior.

From this clearly appear the replies to the first and second objections.

Reply to Objection 3. Every speech of God to the angels is an enlightening; because since the will of God is the rule of truth, it belongs to the perfection and enlightenment of the created mind to know even what God wills. But the same does not apply to the will of the angels, as was explained above.

Whether an angel speaks to God?

Ia q. 107 a. 3

Objection 1. It would seem that an angel does not speak to God. For speech makes known something to another. But an angel cannot make known anything to God, Who knows all things. Therefore an angel does not speak to God.

Objection 2. Further, to speak is to order the mental concept in reference to another, as was shown above (a. 1). But an angel ever orders his mental concept to God. So if an angel speaks to God, he ever speaks to God; which in some ways appears to be unreasonable, since an angel sometimes speaks to another angel. Therefore it seems that an angel never speaks to God.

On the contrary, It is written (Zech. 1:12): “The angel of the Lord answered and said: O Lord of hosts, how long wilt Thou not have mercy on Jerusalem.”

Therefore an angel speaks to God.

I answer that, As was said above (Aa. 1,2), the angel speaks by ordering his mental concept to something else. Now one thing is ordered to another in a twofold manner. In one way for the purpose of giving one thing to another, as in natural things the agent is ordered to the patient, and in human speech the teacher is ordered to the learner; and in this sense an angel in no way speaks to God either of what concerns the truth, or of whatever depends on the created will; because God is the principle and source of all truth and of all will. In another way one thing is ordered to another to receive something, as in natural things the passive is ordered to the agent, and in human speech the disciple to the master; and in this way an angel speaks to God, either by consulting the

Divine will of what ought to be done, or by admiring the Divine excellence which he can never comprehend; thus Gregory says (Moral. ii) that “the angels speak to God, when by contemplating what is above themselves they rise to emotions of admiration.”

Reply to Objection 1. Speech is not always for the purpose of making something known to another; but is sometimes finally ordered to the purpose of manifesting

something to the speaker himself; as when the disciples ask instruction from the master.

Reply to Objection 2. The angels are ever speaking to God in the sense of praising and admiring Him and His works; but they speak to Him by consulting Him about what ought to be done whenever they have to perform any new work, concerning which they desire enlightenment.

Whether local distance influences the angelic speech?

Ia q. 107 a. 4

Objection 1. It would seem that local distance affects the angelic speech. For as Damascene says (De Fide Orth. i, 13): “An angel works where he is.” But speech is an angelic operation. Therefore, as an angel is in a determinate place, it seems that an angel’s speech is limited by the bounds of that place.

Objection 2. Further, a speaker cries out on account of the distance of the hearer. But it is said of the Seraphim that “they cried one to another” (Is. 6:3). Therefore in the angelic speech local distance has some effect.

On the contrary, It is said that the rich man in hell spoke to Abraham, notwithstanding the local distance (Lk. 16:24). Much less therefore does local distance impede the speech of one angel to another.

I answer that, The angelic speech consists in an intellectual operation, as explained above (Aa. 1,2,3). And the intellectual operation of an angel abstracts from the “here and now.” For even our own intellectual operation takes place by abstraction from the “here and now,”

except accidentally on the part of the phantasms, which do not exist at all in an angel. But as regards whatever is abstracted from “here and now,” neither difference of time nor local distance has any influence whatever. Hence in the angelic speech local distance is no impediment.

Reply to Objection 1. The angelic speech, as above explained (a. 1, ad 2), is interior; perceived, nevertheless, by another; and therefore it exists in the angel who speaks, and consequently where the angel is who speaks. But as local distance does not prevent one angel seeing another, so neither does it prevent an angel perceiving what is ordered to him on the part of another; and this is to perceive his speech.

Reply to Objection 2. The cry mentioned is not a bodily voice raised by reason of the local distance; but is taken to signify the magnitude of what is said, or the intensity of the affection, according to what Gregory says (Moral. ii): “The less one desires, the less one cries out.”

Whether all the angels know what one speaks to another?

Ia q. 107 a. 5

Objection 1. It would seem that all the angels know what one speaks to another. For unequal local distance is the reason why all men do not know what one man says to another. But in the angelic speech local distance has no effect, as above explained (a. 4). Therefore all the angels know what one speaks to another.

Objection 2. Further, all the angels have the intellectual power in common. So if the mental concept of one ordered to another is known by one, it is for the same reason known by all.

Objection 3. Further, enlightenment is a kind of speech. But the enlightenment of one angel by another extends to all the angels, because, as Dionysius says (Coel. Hier. xv): “Each one of the heavenly beings communicates what he learns to the others.” Therefore the speech of one angel to another extends to all.

On the contrary, One man can speak to another alone; much more can this be the case among the angels.

I answer that, As above explained (Aa. 1,2), the

mental concept of one angel can be perceived by another when the angel who possesses the concept refers it by his will to another. Now a thing can be ordered through some cause to one thing and not to another; consequently the concept of one (angel) may be known by one and not by another; and therefore an angel can perceive the speech of one angel to another; whereas others do not, not through the obstacle of local distance, but on account of the will so ordering, as explained above.

From this appear the replies to the first and second objections.

Reply to Objection 3. Enlightenment is of those truths that emanate from the first rule of truth, which is the principle common to all the angels; and in that way all enlightenments are common to all. But speech may be of something ordered to the principle of the created will, which is proper to each angel; and in this way it is not necessary that these speeches should be common to all.

Objection 1. It would seem that one angel does not speak to another. For Gregory says (Moral. xviii) that, in the state of the resurrection “each one’s body will not hide his mind from his fellows.” Much less, therefore, is one angel’s mind hidden from another. But speech manifests to another what lies hidden in the mind. Therefore it is not necessary that one angel should speak to another.

Objection 2. Further, speech is twofold; interior, whereby one speaks to oneself; and exterior, whereby one speaks to another. But exterior speech takes place by some sensible sign, as by voice, or gesture, or some bodily member, as the tongue, or the fingers, and this cannot apply to the angels. Therefore one angel does not speak to another.

Objection 3. Further, the speaker incites the hearer to listen to what he says. But it does not appear that one angel incites another to listen; for this happens among us by some sensible sign. Therefore one angel does not speak to another.

On the contrary, The Apostle says (1 Cor. 13:1): “If I speak with the tongues of men and of angels.”

Answer that, The angels speak in a certain way. But, as Gregory says (Moral. ii): “It is fitting that our mind, rising above the properties of bodily speech, should be lifted to the sublime and unknown methods of interior speech.”

To understand how one angel speaks to another, we must consider that, as we explained above (q. 82, a. 4), when treating of the actions and powers of the soul, the will moves the intellect to its operation. Now an intelligible object is present to the intellect in three ways; first, habitually, or in the memory, as Augustine says (De Trin. xiv, 6,7); secondly, as actually considered or conceived; thirdly, as related to something else. And it is clear that the intelligible object passes from the first to the second stage by the command of the will, and hence in the definition of habit these words occur, “which anyone uses when he wills.” So likewise the intelligible object passes from the second to the third stage by the will; for by the will the concept of the mind is ordered to something else, as, for instance, either to the performing of an action, or to being made known to another. Now when the mind turns itself to the actual consideration of any habitual knowledge, then a person speaks

to himself; for the concept of the mind is called “the interior word.” And by the fact that the concept of the angelic mind is ordered to be made known to another by the will of the angel himself, the concept of one angel is made known to another; and in this way one angel speaks to another; for to speak to another only means to make known the mental concept to another.

Reply to Objection 1. Our mental concept is hidden by a twofold obstacle. The first is in the will, which can retain the mental concept within, or can direct it externally. In this way God alone can see the mind of another, according to 1 Cor. 2:11: “What man knoweth the things of a man, but the spirit of a man that is in him?” The other obstacle whereby the mental concept is excluded from another one’s knowledge, comes from the body; and so it happens that even when the will directs the concept of the mind to make itself known, it is not at once made known to another; but some sensible sign must be used. Gregory alludes to this fact when he says (Moral. ii): “To other eyes we seem to stand aloof as it were behind the wall of the body; and when we wish to make ourselves known, we go out as it were by the door of the tongue to show what we really are.” But an angel is under no such obstacle, and so he can make his concept known to another at once.

Reply to Objection 2. External speech, made by the voice, is a necessity for us on account of the obstacle of the body. Hence it does not befit an angel; but only interior speech belongs to him, and this includes not only the interior speech by mental concept, but also its being ordered to another’s knowledge by the will. So the tongue of an angel is called metaphorically the angel’s power, whereby he manifests his mental concept.

Reply to Objection 3. There is no need to draw the attention of the good angels, inasmuch as they always see each other in the Word; for as one ever sees the other, so he ever sees what is ordered to himself. But because by their very nature they can speak to each other, and even now the bad angels speak to each other, we must say that the intellect is moved by the intelligible object just as sense is affected by the sensible object. Therefore, as sense is aroused by the sensible object, so the mind of an angel can be aroused to attention by some intelligible power.

Objection 1. It would seem that the inferior angel does not speak to the superior. For on the text (1 Cor. 13:1), “If I speak with the tongues of men and of angels,” a gloss remarks that the speech of the angels is an enlightenment whereby the superior enlightens the inferior. But the inferior never enlightens the superior, as was above explained (q. 106, a. 3). Therefore neither do the inferior speak to the superior.

Objection 2. Further, as was said above (q. 106, a. 1), to enlighten means merely to acquaint one man of what is known to another; and this is to speak. Therefore to speak and to enlighten are the same; so the same conclusion follows.

Objection 3. Further, Gregory says (Moral. ii): “God speaks to the angels by the very fact that He shows to their hearts His hidden and invisible things.” But this is to enlighten them. Therefore, whenever God speaks, He enlightens. In the same way every angelic speech is an enlightening. Therefore an inferior angel can in no way speak to a superior angel.

On the contrary, According to the exposition of Dionysius (Coel. Hier. vii), the inferior angels said to the superior: “Who is this King of Glory?”

Answer that, The inferior angels can speak to the superior. To make this clear, we must consider that every angelic enlightening is an angelic speech; but on the other hand, not every speech is an enlightening; because, as we have said (a. 1), for one angel to speak to another angel means nothing else, but that by his own will he directs his mental concept in such a way, that it becomes known to the other. Now what the mind conceives may be reduced to a twofold principle; to God Himself, Who is the primal truth; and to the will of the one who understands, whereby we actually consider

anything. But because truth is the light of the intellect, and God Himself is the rule of all truth; the manifestation of what is conceived by the mind, as depending on the primary truth, is both speech and enlightenment; for example, when one man says to another: “Heaven was created by God”; or, “Man is an animal.” The manifestation, however, of what depends on the will of the one who understands, cannot be called an enlightenment, but is only a speech; for instance, when one says to another: “I wish to learn this; I wish to do this or that.” The reason is that the created will is not a light, nor a rule of truth; but participates of light. Hence to communicate what comes from the created will is not, as such, an enlightening. For to know what you may will, or what you may understand does not belong to the perfection of my intellect; but only to know the truth in reality.

Now it is clear that the angels are called superior or inferior by comparison with this principle, God; and therefore enlightenment, which depends on the principle which is God, is conveyed only by the superior angels to the inferior. But as regards the will as the principle, he who wills is first and supreme; and therefore the manifestation of what belongs to the will, is conveyed to others by the one who wills. In that manner both the superior angels speak to the inferior, and the inferior speak to the superior.

From this clearly appear the replies to the first and second objections.

Reply to Objection 3. Every speech of God to the angels is an enlightening; because since the will of God is the rule of truth, it belongs to the perfection and enlightenment of the created mind to know even what God wills. But the same does not apply to the will of the angels, as was explained above.

Objection 1. It would seem that an angel does not speak to God. For speech makes known something to another. But an angel cannot make known anything to God, Who knows all things. Therefore an angel does not speak to God.

Objection 2. Further, to speak is to order the mental concept in reference to another, as was shown above (a. 1). But an angel ever orders his mental concept to God. So if an angel speaks to God, he ever speaks to God; which in some ways appears to be unreasonable, since an angel sometimes speaks to another angel. Therefore it seems that an angel never speaks to God.

On the contrary, It is written (Zech. 1:12): “The angel of the Lord answered and said: O Lord of hosts, how long wilt Thou not have mercy on Jerusalem.” Therefore an angel speaks to God.

I answer that, As was said above (Aa. 1,2), the angel speaks by ordering his mental concept to something else. Now one thing is ordered to another in a twofold manner. In one way for the purpose of giving one thing to another, as in natural things the agent is ordered to the patient, and in human speech the teacher is ordered to the learner; and in this sense an angel in no way speaks

to God either of what concerns the truth, or of whatever depends on the created will; because God is the principle and source of all truth and of all will. In another way one thing is ordered to another to receive something, as in natural things the passive is ordered to the agent, and in human speech the disciple to the master; and in this way an angel speaks to God, either by consulting the Divine will of what ought to be done, or by admiring the Divine excellence which he can never comprehend; thus Gregory says (Moral. ii) that “the angels speak to God, when by contemplating what is above themselves they rise to emotions of admiration.”

Reply to Objection 1. Speech is not always for the purpose of making something known to another; but is sometimes finally ordered to the purpose of manifesting something to the speaker himself; as when the disciples ask instruction from the master.

Reply to Objection 2. The angels are ever speaking to God in the sense of praising and admiring Him and His works; but they speak to Him by consulting Him about what ought to be done whenever they have to perform any new work, concerning which they desire enlightenment.

Objection 1. It would seem that local distance affects the angelic speech. For as Damascene says (*De Fide Orth.* i, 13): “An angel works where he is.” But speech is an angelic operation. Therefore, as an angel is in a determinate place, it seems that an angel’s speech is limited by the bounds of that place.

Objection 2. Further, a speaker cries out on account of the distance of the hearer. But it is said of the Seraphim that “they cried one to another” (*Is.* 6:3). Therefore in the angelic speech local distance has some effect.

On the contrary, It is said that the rich man in hell spoke to Abraham, notwithstanding the local distance (*Lk.* 16:24). Much less therefore does local distance impede the speech of one angel to another.

I answer that, The angelic speech consists in an intellectual operation, as explained above (*Aa.* 1,2,3). And the intellectual operation of an angel abstracts from the “here and now.” For even our own intellectual operation takes place by abstraction from the “here and now,”

except accidentally on the part of the phantasms, which do not exist at all in an angel. But as regards whatever is abstracted from “here and now,” neither difference of time nor local distance has any influence whatever. Hence in the angelic speech local distance is no impediment.

Reply to Objection 1. The angelic speech, as above explained (*a.* 1, ad 2), is interior; perceived, nevertheless, by another; and therefore it exists in the angel who speaks, and consequently where the angel is who speaks. But as local distance does not prevent one angel seeing another, so neither does it prevent an angel perceiving what is ordered to him on the part of another; and this is to perceive his speech.

Reply to Objection 2. The cry mentioned is not a bodily voice raised by reason of the local distance; but is taken to signify the magnitude of what is said, or the intensity of the affection, according to what Gregory says (*Moral.* ii): “The less one desires, the less one cries out.”

Objection 1. It would seem that all the angels know what one speaks to another. For unequal local distance is the reason why all men do not know what one man says to another. But in the angelic speech local distance has no effect, as above explained (a. 4). Therefore all the angels know what one speaks to another.

Objection 2. Further, all the angels have the intellectual power in common. So if the mental concept of one ordered to another is known by one, it is for the same reason known by all.

Objection 3. Further, enlightenment is a kind of speech. But the enlightenment of one angel by another extends to all the angels, because, as Dionysius says (Coel. Hier. xv): "Each one of the heavenly beings communicates what he learns to the others." Therefore the speech of one angel to another extends to all.

On the contrary, One man can speak to another alone; much more can this be the case among the angels.

I answer that, As above explained (Aa. 1,2), the

mental concept of one angel can be perceived by another when the angel who possesses the concept refers it by his will to another. Now a thing can be ordered through some cause to one thing and not to another; consequently the concept of one (angel) may be known by one and not by another; and therefore an angel can perceive the speech of one angel to another; whereas others do not, not through the obstacle of local distance, but on account of the will so ordering, as explained above.

From this appear the replies to the first and second objections.

Reply to Objection 3. Enlightenment is of those truths that emanate from the first rule of truth, which is the principle common to all the angels; and in that way all enlightenments are common to all. But speech may be of something ordered to the principle of the created will, which is proper to each angel; and in this way it is not necessary that these speeches should be common to all.

FIRST PART, QUESTION 108

Of the Angelic Degrees of Hierarchies and Orders (In Eight Articles)

We next consider the degrees of the angels in their hierarchies and orders; for it was said above (q. 106, a. 3), that the superior angels enlighten the inferior angels; and not conversely.

Under this head there are eight points of inquiry:

- (1) Whether all the angels belong to one hierarchy?
- (2) Whether in one hierarchy there is only one order?
- (3) Whether in one order there are many angels?
- (4) Whether the distinction of hierarchies and orders is natural?
- (5) Of the names and properties of each order.
- (6) Of the comparison of the orders to one another.
- (7) Whether the orders will outlast the Day of Judgment?
- (8) Whether men are taken up into the angelic orders?

Whether all the angels are of one hierarchy?

Ia q. 108 a. 1

Objection 1. It would seem that all the angels belong to one hierarchy. For since the angels are supreme among creatures, it is evident that they are ordered for the best. But the best ordering of a multitude is for it to be governed by one authority, as the Philosopher shows (Metaph. xii, Did. xi, 10; Polit. iii, 4). Therefore as a hierarchy is nothing but a sacred principality, it seems that all the angels belong to one hierarchy.

Objection 2. Further, Dionysius says (Coel. Hier. iii) that “hierarchy is order, knowledge, and action.” But all the angels agree in one order towards God, Whom they know, and by Whom in their actions they are ruled. Therefore all the angels belong to one hierarchy.

Objection 3. Further, the sacred principality called hierarchy is to be found among men and angels. But all men are of one hierarchy. Therefore likewise all the angels are of one hierarchy.

On the contrary, Dionysius (Coel. Hier. vi) distinguishes three hierarchies of angels.

I answer that, Hierarchy means a “sacred” principality, as above explained. Now principality includes two things: the prince himself and the multitude ordered under the prince. Therefore because there is one God, the Prince not only of all the angels but also of men and all creatures; so there is one hierarchy, not only of all the angels, but also of all rational creatures, who can be participators of sacred things; according to Augustine (De Civ. Dei xii, 1): “There are two cities, that is, two societies, one of the good angels and men, the other of the wicked.” But if we consider the principality on the part of the multitude ordered under the prince, then principality is said to be “one” accordingly as the multitude can be subject in “one” way to the government of the prince. And those that cannot be governed in the same way by a prince belong to different principalities: thus, under one king there are different cities, which are governed by different laws and administrators. Now it is evident that men do not receive the Divine enlighten-

ments in the same way as do the angels; for the angels receive them in their intelligible purity, whereas men receive them under sensible signs, as Dionysius says (Coel. Hier. i). Therefore there must needs be a distinction between the human and the angelic hierarchy. In the same manner we distinguish three angelic hierarchies. For it was shown above (q. 55, a. 3), in treating of the angelic knowledge, that the superior angels have a more universal knowledge of the truth than the inferior angels. This universal knowledge has three grades among the angels. For the types of things, concerning which the angels are enlightened, can be considered in a threefold manner. First as preceding from God as the first universal principle, which mode of knowledge belongs to the first hierarchy, connected immediately with God, and, “as it were, placed in the vestibule of God,” as Dionysius says (Coel. Hier. vii). Secondly, forasmuch as these types depend on the universal created causes which in some way are already multiplied; which mode belongs to the second hierarchy. Thirdly, forasmuch as these types are applied to particular things as depending on their causes; which mode belongs to the lowest hierarchy. All this will appear more clearly when we treat of each of the orders (a. 6). In this way are the hierarchies distinguished on the part of the multitude of subjects.

Hence it is clear that those err and speak against the opinion of Dionysius who place a hierarchy in the Divine Persons, and call it the “supercelestial” hierarchy. For in the Divine Persons there exists, indeed, a natural order, but there is no hierarchical order, for as Dionysius says (Coel. Hier. iii): “The hierarchical order is so directed that some be cleansed, enlightened, and perfected; and that others cleanse, enlighten, and perfect”; which far be it from us to apply to the Divine Persons.

Reply to Objection 1. This objection considers principality on the part of the ruler, inasmuch as a multitude is best ruled by one ruler, as the Philosopher asserts in those passages.

Reply to Objection 2. As regards knowing God Himself, Whom all see in one way—that is, in His essence—there is no hierarchical distinction among the angels; but there is such a distinction as regards the types of created things, as above explained.

Reply to Objection 3. All men are of one species, and have one connatural mode of understanding; which is not the case in the angels: and hence the same argument does not apply to both.

Whether there are several orders in one hierarchy?

Ia q. 108 a. 2

Objection 1. It would seem that in the one hierarchy there are not several orders. For when a definition is multiplied, the thing defined is also multiplied. But hierarchy is order, as Dionysius says (Coel. Hier. iii). Therefore, if there are many orders, there is not one hierarchy only, but many.

Objection 2. Further, different orders are different grades, and grades among spirits are constituted by different spiritual gifts. But among the angels all the spiritual gifts are common to all, for “nothing is possessed individually” (Sent. ii, D, ix). Therefore there are not different orders of angels.

Objection 3. Further, in the ecclesiastical hierarchy the orders are distinguished according to the actions of “cleansing,” “enlightening,” and “perfecting.” For the order of deacons is “cleansing,” the order of priests, is “enlightening,” and of bishops “perfecting,” as Dionysius says (Eccl. Hier. v). But each of the angels cleanses, enlightens, and perfects. Therefore there is no distinction of orders among the angels.

On the contrary, The Apostle says (Eph. 1:20,21) that “God has set the Man Christ above all principality and power, and virtue, and dominion”: which are the various orders of the angels, and some of them belong to one hierarchy, as will be explained (a. 6).

I answer that, As explained above, one hierarchy is one principality—that is, one multitude ordered in one way under the rule of a prince. Now such a multitude would not be ordered, but confused, if there were not in it different orders. So the nature of a hierarchy requires diversity of orders.

This diversity of order arises from the diversity of offices and actions, as appears in one city where there are different orders according to the different actions; for there is one order of those who judge, and another of those who fight, and another of those who labor in the fields, and so forth.

But although one city thus comprises several orders, all may be reduced to three, when we consider that every multitude has a beginning, a middle, and an end.

So in every city, a threefold order of men is to be seen, some of whom are supreme, as the nobles; others are the last, as the common people, while others hold a place between these, as the middle-class [populus honorabilis]. In the same way we find in each angelic hierarchy the orders distinguished according to their actions and offices, and all this diversity is reduced to three—namely, to the summit, the middle, and the base; and so in every hierarchy Dionysius places three orders (Coel. Hier. vi).

Reply to Objection 1. Order is twofold. In one way it is taken as the order comprehending in itself different grades; and in that way a hierarchy is called an order. In another way one grade is called an order; and in that sense the several orders of one hierarchy are so called.

Reply to Objection 2. All things are possessed in common by the angelic society, some things, however, being held more excellently by some than by others. Each gift is more perfectly possessed by the one who can communicate it, than by the one who cannot communicate it; as the hot thing which can communicate heat is more perfect than what is unable to give heat. And the more perfectly anyone can communicate a gift, the higher grade he occupies, as he is in the more perfect grade of mastership who can teach a higher science. By this similitude we can reckon the diversity of grades or orders among the angels, according to their different offices and actions.

Reply to Objection 3. The inferior angel is superior to the highest man of our hierarchy, according to the words, “He that is the lesser in the kingdom of heaven, is greater than he”—namely, John the Baptist, than whom “there hath not risen a greater among them that are born of women” (Mat. 11:11). Hence the lesser angel of the heavenly hierarchy can not only cleanse, but also enlighten and perfect, and in a higher way than can the orders of our hierarchy. Thus the heavenly orders are not distinguished by reason of these, but by reason of other different acts.

Whether there are many angels in one order?

Ia q. 108 a. 3

Objection 1. It seems that there are not many angels in one order. For it was shown above (q. 50, a. 4), that all the angels are unequal. But equals belong to one order. Therefore there are not many angels in one order.

Objection 2. Further, it is superfluous for a thing to be done by many, which can be done sufficiently by

one. But that which belongs to one angelic office can be done sufficiently by one angel; so much more sufficiently than the one sun does what belongs to the office of the sun, as the angel is more perfect than a heavenly body. If, therefore, the orders are distinguished by their offices, as stated above (a. 2), several angels in one or-

der would be superfluous.

Objection 3. Further, it was said above (obj. 1) that all the angels are unequal. Therefore, if several angels (for instance, three or four), are of one order, the lowest one of the superior order will be more akin to the highest of the inferior order than with the highest of his own order; and thus he does not seem to be more of one order with the latter than with the former. Therefore there are not many angels of one order.

On the contrary, It is written: “The Seraphim cried to one another” (Is. 6:3). Therefore there are many angels in the one order of the Seraphim.

I answer that, Whoever knows anything perfectly, is able to distinguish its acts, powers, and nature, down to the minutest details, whereas he who knows a thing in an imperfect manner can only distinguish it in a general way, and only as regards a few points. Thus, one who knows natural things imperfectly, can distinguish their orders in a general way, placing the heavenly bodies in one order, inanimate inferior bodies in another, plants in another, and animals in another; whilst he who knows natural things perfectly, is able to distinguish different orders in the heavenly bodies themselves, and in each of the other orders.

Now our knowledge of the angels is imperfect, as

Dionysius says (Coel. Hier. vi). Hence we can only distinguish the angelic offices and orders in a general way, so as to place many angels in one order. But if we knew the offices and distinctions of the angels perfectly, we should know perfectly that each angel has his own office and his own order among things, and much more so than any star, though this be hidden from us.

Reply to Objection 1. All the angels of one order are in some way equal in a common similitude, whereby they are placed in that order; but absolutely speaking they are not equal. Hence Dionysius says (Coel. Hier. x) that in one and the same order of angels there are those who are first, middle, and last.

Reply to Objection 2. That special distinction of orders and offices wherein each angel has his own office and order, is hidden from us.

Reply to Objection 3. As in a surface which is partly white and partly black, the two parts on the borders of white and black are more akin as regards their position than any other two white parts, but are less akin in quality; so two angels who are on the boundary of two orders are more akin in propinquity of nature than one of them is akin to the others of its own order, but less akin in their fitness for similar offices, which fitness, indeed, extends to a definite limit.

Whether the distinction of hierarchies and orders comes from the angelic nature?

Ia q. 108 a. 4

Objection 1. It would seem that the distinction of hierarchies and of orders is not from the nature of the angels. For hierarchy is “a sacred principality,” and Dionysius places in its definition that it “approaches a resemblance to God, as far as may be” (Coel. Hier. iii). But sanctity and resemblance to God is in the angels by grace, and not by nature. Therefore the distinction of hierarchies and orders in the angels is by grace, and not by nature.

Objection 2. Further, the Seraphim are called “burning” or “kindling,” as Dionysius says (Coel. Hier. vii). This belongs to charity which comes not from nature but from grace; for “it is poured forth in our hearts by the Holy Ghost Who is given to us” (Rom. 5:5): “which is said not only of holy men, but also of the holy angels,” as Augustine says (De Civ. Dei xii). Therefore the angelic orders are not from nature, but from grace.

Objection 3. Further, the ecclesiastical hierarchy is copied from the heavenly. But the orders among men are not from nature, but by the gift of grace; for it is not a natural gift for one to be a bishop, and another a priest, and another a deacon. Therefore neither in the angels are the orders from nature, but from grace only.

On the contrary, The Master says (ii, D. 9) that “an angelic order is a multitude of heavenly spirits, who are likened to each other by some gift of grace, just as they

agree also in the participation of natural gifts.” Therefore the distinction of orders among the angels is not only by gifts of grace, but also by gifts of nature.

I answer that, The order of government, which is the order of a multitude under authority, is derived from its end. Now the end of the angels may be considered in two ways. First, according to the faculty of nature, so that they may know and love God by natural knowledge and love; and according to their relation to this end the orders of the angels are distinguished by natural gifts. Secondly, the end of the angelic multitude can be taken from what is above their natural powers, which consists in the vision of the Divine Essence, and in the unchangeable fruition of His goodness; to which end they can reach only by grace; and hence as regards this end, the orders in the angels are adequately distinguished by the gifts of grace, but dispositively by natural gifts, forasmuch as to the angels are given gratuitous gifts according to the capacity of their natural gifts; which is not the case with men, as above explained (q. 62, a. 6). Hence among men the orders are distinguished according to the gratuitous gifts only, and not according to natural gifts.

From the above the replies to the objections are evident.

Objection 1. It would seem that the orders of the angels are not properly named. For all the heavenly spirits are called angels and heavenly virtues. But common names should not be appropriated to individuals. Therefore the orders of the angels and virtues are ineptly named.

Objection 2. Further, it belongs to God alone to be Lord, according to the words, "Know ye that the Lord He is God" (Ps. 99:3). Therefore one order of the heavenly spirits is not properly called "Dominations."

Objection 3. Further, the name "Domination" seems to imply government and likewise the names "Principalities" and "Powers." Therefore these three names do not seem to be properly applied to three orders.

Objection 4. Further, archangels are as it were angel princes. Therefore this name ought not to be given to any other order than to the "Principalities."

Objection 5. Further, the name "Seraphim" is derived from ardor, which pertains to charity; and the name "Cherubim" from knowledge. But charity and knowledge are gifts common to all the angels. Therefore they ought not to be names of any particular orders.

Objection 6. Further, Thrones are seats. But from the fact that God knows and loves the rational creature He is said to sit within it. Therefore there ought not to be any order of "Thrones" besides the "Cherubim" and "Seraphim." Therefore it appears that the orders of angels are not properly styled.

On the contrary is the authority of Holy Scripture wherein they are so named. For the name "Seraphim" is found in Is. 6:2; the name "Cherubim" in Ezech. 1 (Cf. 10:15,20); "Thrones" in Col. 1:16; "Dominations," "Virtues," "Powers," and "Principalities" are mentioned in Eph. 1:21; the name "Archangels" in the canonical epistle of St. Jude (9), and the name "Angels" is found in many places of Scripture.

I answer that, As Dionysius says (Coel. Hier. vii), in the names of the angelic orders it is necessary to observe that the proper name of each order expresses its property. Now to see what is the property of each order, we must consider that in coordinated things, something may be found in a threefold manner: by way of property, by way of excess, and by way of participation. A thing is said to be in another by way of property, if it is adequate and proportionate to its nature: by excess when an attribute is less than that to which it is attributed, but is possessed thereby in an eminent manner, as we have stated (q. 13, a. 2) concerning all the names which are attributed to God: by participation, when an attribute is possessed by something not fully but partially; thus holy men are called gods by participation. Therefore, if anything is to be called by a name designating its property, it ought not to be named from what it participates imperfectly, nor from that which it possesses in excess, but from that which is adequate

thereto; as, for instance, when we wish properly to name a man, we should call him a "rational substance," but not an "intellectual substance," which latter is the proper name of an angel; because simple intelligence belongs to an angel as a property, and to man by participation; nor do we call him a "sensible substance," which is the proper name of a brute; because sense is less than the property of a man, and belongs to man in a more excellent way than to other animals.

So we must consider that in the angelic orders all spiritual perfections are common to all the angels, and that they are all more excellently in the superior than in the inferior angels. Further, as in these perfections there are grades, the superior perfection belongs to the superior order as its property, whereas it belongs to the inferior by participation; and conversely the inferior perfection belongs to the inferior order as its property, and to the superior by way of excess; and thus the superior order is denominated from the superior perfection.

So in this way Dionysius (Coel. Hier. vii) explains the names of the orders accordingly as they befit the spiritual perfections they signify. Gregory, on the other hand, in expounding these names (Hom. xxxiv in Evang.) seems to regard more the exterior ministrations; for he says that "angels are so called as announcing the least things; and the archangels in the greatest; by the virtues miracles are wrought; by the powers hostile powers are repulsed; and the principalities preside over the good spirits themselves."

Reply to Objection 1. Angel means "messenger." So all the heavenly spirits, so far as they make known Divine things, are called "angels." But the superior angels enjoy a certain excellence, as regards this manifestation, from which the superior orders are denominated. The lowest order of angels possess no excellence above the common manifestation; and therefore it is denominated from manifestation only; and thus the common name remains as it were proper to the lowest order, as Dionysius says (Coel. Hier. v). Or we may say that the lowest order can be specially called the order of "angels," forasmuch as they announce things to us immediately.

"Virtue" can be taken in two ways. First, commonly, considered as the medium between the essence and the operation, and in that sense all the heavenly spirits are called heavenly virtues, as also "heavenly essences." Secondly, as meaning a certain excellence of strength; and thus it is the proper name of an angelic order. Hence Dionysius says (Coel. Hier. viii) that the "name 'virtues' signifies a certain virile and immovable strength"; first, in regard of those Divine operations which befit them; secondly, in regard to receiving Divine gifts. Thus it signifies that they undertake fearlessly the Divine behests appointed to them; and this seems to imply strength of mind.

Reply to Objection 2. As Dionysius says (Div.

Nom. xii): “Dominion is attributed to God in a special manner, by way of excess: but the Divine word gives the more illustrious heavenly princes the name of Lord by participation, through whom the inferior angels receive the Divine gifts.” Hence Dionysius also states (Coel. Hier. viii) that the name “Domination” means first “a certain liberty, free from servile condition and common subjection, such as that of plebeians, and from tyrannical oppression,” endured sometimes even by the great. Secondly, it signifies “a certain rigid and inflexible supremacy which does not bend to any servile act, or to the act, of those who are subject to or oppressed by tyrants.” Thirdly, it signifies “the desire and participation of the true dominion which belongs to God.” Likewise the name of each order signifies the participation of what belongs to God; as the name “Virtues” signifies the participation of the Divine virtue; and the same principle applies to the rest.

Reply to Objection 3. The names “Domination,” “Power,” and “Principality” belong to government in different ways. The place of a lord is only to prescribe what is to be done. So Gregory says (Hom. xxiv in Evang.), that “some companies of the angels, because others are subject to obedience to them, are called dominations.” The name “Power” points out a kind of order, according to what the Apostle says, “He that resisteth the power, resisteth the ordination of God” (Rom. 13:2). And so Dionysius says (Coel. Hier. viii) that the name “Power” signifies a kind of ordination both as regards the reception of Divine things, and as regards the Divine actions performed by superiors towards inferiors by leading them to things above. Therefore, to the order of “Powers” it belongs to regulate what is to be done by those who are subject to them. To preside [principari] as Gregory says (Hom. xxiv in Ev.) is “to be first among others,” as being first in carrying out what is ordered to be done. And so Dionysius says (Coel. Hier. ix) that the name of “Principality” signifies “one who leads in a sacred order.” For those who lead others, being first among them, are properly called “princes,” according to the words, “Princes went before joined with singers” (Ps. 67:26).

Reply to Objection 4. The “Archangels,” according to Dionysius (Coel. Hier. ix), are between the “Principality” and the “Angels.” A medium compared to one extreme seems like the other, as participating in the nature of both extremes; thus tepid seems cold compared to hot, and hot compared to cold. So the “Archangels” are called the “angel princes”; forasmuch as they are princes as regards the “Angels,” and angels as regards the Principality. But according to Gregory (Hom. xxiv in Ev.) they are called “Archangels,” because they preside over the one order of the “Angels”; as it were, announcing greater things: and the “Principality” are so called as presiding over all the heavenly “Virtues” who

fulfil the Divine commands.

Reply to Objection 5. The name “Seraphim” does not come from charity only, but from the excess of charity, expressed by the word ardor or fire. Hence Dionysius (Coel. Hier. vii) expounds the name “Seraphim” according to the properties of fire, containing an excess of heat. Now in fire we may consider three things. First, the movement which is upwards and continuous. This signifies that they are borne inflexibly towards God. Secondly, the active force which is “heat,” which is not found in fire simply, but exists with a certain sharpness, as being of most penetrating action, and reaching even to the smallest things, and as it were, with superabundant fervor; whereby is signified the action of these angels, exercised powerfully upon those who are subject to them, rousing them to a like fervor, and cleansing them wholly by their heat. Thirdly we consider in fire the quality of clarity, or brightness; which signifies that these angels have in themselves an inextinguishable light, and that they also perfectly enlighten others.

In the same way the name “Cherubim” comes from a certain excess of knowledge; hence it is interpreted “fulness of knowledge,” which Dionysius (Coel. Hier. vii) expounds in regard to four things: the perfect vision of God; the full reception of the Divine Light; their contemplation in God of the beauty of the Divine order; and in regard to the fact that possessing this knowledge fully, they pour it forth copiously upon others.

Reply to Objection 6. The order of the “Thrones” excels the inferior orders as having an immediate knowledge of the types of the Divine works; whereas the “Cherubim” have the excellence of knowledge and the “Seraphim” the excellence of ardor. And although these two excellent attributes include the third, yet the gift belonging to the “Thrones” does not include the other two; and so the order of the “Thrones” is distinguished from the orders of the “Cherubim” and the “Seraphim.” For it is a common rule in all things that the excellence of the inferior is contained in the superior, but not conversely. But Dionysius (Coel. Hier. vii) explains the name “Thrones” by its relation to material seats, in which we may consider four things. First, the site; because seats are raised above the earth, and to the angels who are called “Thrones” are raised up to the immediate knowledge of the types of things in God. Secondly, because in material seats is displayed strength, forasmuch as a person sits firmly on them. But here the reverse is the case; for the angels themselves are made firm by God. Thirdly, because the seat receives him who sits thereon, and he can be carried thereupon; and so the angels receive God in themselves, and in a certain way bear Him to the inferior creatures. Fourthly, because in its shape, a seat is open on one side to receive the sitter; and thus are the angels promptly open to receive God and to serve Him.

Objection 1. It would seem that the grades of the orders are not properly assigned. For the order of prelates is the highest. But the names of “Dominations,” “Principalities,” and “Powers” of themselves imply prelacy. Therefore these orders ought not to be supreme.

Objection 2. Further, the nearer an order is to God, the higher it is. But the order of “Thrones” is the nearest to God; for nothing is nearer to the sitter than the seat. Therefore the order of the “Thrones” is the highest.

Objection 3. Further, knowledge comes before love, and intellect is higher than will. Therefore the order of “Cherubim” seems to be higher than the “Seraphim.”

Objection 4. Further, Gregory (Hom. xxiv in Evang.) places the “Principalities” above the “Powers.” These therefore are not placed immediately above the Archangels, as Dionysius says (Coel. Hier. ix).

On the contrary, Dionysius (Coel. Hier. vii), places in the highest hierarchy the “Seraphim” as the first, the “Cherubim” as the middle, the “Thrones” as the last; in the middle hierarchy he places the “Dominations,” as the first, the “Virtues” in the middle, the “Powers” last; in the lowest hierarchy the “Principalities” first, then the “Archangels,” and lastly the “Angels.”

I answer that, The grades of the angelic orders are assigned by Gregory (Hom. xxiv in Ev.) and Dionysius (Coel. Hier. vii), who agree as regards all except the “Principalities” and “Virtues.” For Dionysius places the “Virtues” beneath the “Dominations,” and above the “Powers”; the “Principalities” beneath the “Powers” and above the “Archangels.” Gregory, however, places the “Principalities” between the “Dominations” and the “Powers”; and the “Virtues” between the “Powers” and the “Archangels.” Each of these placings may claim authority from the words of the Apostle, who (Eph. 1:20,21) enumerates the middle orders, beginning from the lowest saying that “God set Him,” i.e. Christ, “on His right hand in the heavenly places above all Principality and Power, and Virtue, and Dominion.” Here he places “Virtues” between “Powers” and “Dominations,” according to the placing of Dionysius. Writing however to the Colossians (1:16), numbering the same orders from the highest, he says: “Whether Thrones, or Dominations, or Principalities, or Powers, all things were created by Him and in Him.” Here he places the “Principalities” between “Dominations” and “Powers,” as does also Gregory.

Let us then first examine the reason for the ordering of Dionysius, in which we see, that, as said above (a. 1), the highest hierarchy contemplates the ideas of things in God Himself; the second in the universal causes; and third in their application to particular effects. And because God is the end not only of the angelic ministrations, but also of the whole creation, it belongs to the first hierarchy to consider the end; to the middle one

belongs the universal disposition of what is to be done; and to the last belongs the application of this disposition to the effect, which is the carrying out of the work; for it is clear that these three things exist in every kind of operation. So Dionysius, considering the properties of the orders as derived from their names, places in the first hierarchy those orders the names of which are taken from their relation to God, the “Seraphim,” “Cherubim,” and “Thrones”; and he places in the middle hierarchy those orders whose names denote a certain kind of common government or disposition—the “Dominations,” “Virtues,” and “Powers”; and he places in the third hierarchy the orders whose names denote the execution of the work, the “Principalities,” “Angels,” and “Archangels.”

As regards the end, three things may be considered. For firstly we consider the end; then we acquire perfect knowledge of the end; thirdly, we fix our intention on the end; of which the second is an addition to the first, and the third an addition to both. And because God is the end of creatures, as the leader is the end of an army, as the Philosopher says (Metaph. xii, Did. xi, 10); so a somewhat similar order may be seen in human affairs. For there are some who enjoy the dignity of being able with familiarity to approach the king or leader; others in addition are privileged to know his secrets; and others above these ever abide with him, in a close union. According to this similitude, we can understand the disposition in the orders of the first hierarchy; for the “Thrones” are raised up so as to be the familiar recipients of God in themselves, in the sense of knowing immediately the types of things in Himself; and this is proper to the whole of the first hierarchy. The “Cherubim” know the Divine secrets supereminently; and the “Seraphim” excel in what is the supreme excellence of all, in being united to God Himself; and all this in such a manner that the whole of this hierarchy can be called the “Thrones”; as, from what is common to all the heavenly spirits together, they are all called “Angels.”

As regards government, three things are comprised therein, the first of which is to appoint those things which are to be done, and this belongs to the “Dominations”; the second is to give the power of carrying out what is to be done, which belongs to the “Virtues”; the third is to order how what has been commanded or decided to be done can be carried out by others, which belongs to the “Powers.”

The execution of the angelic ministrations consists in announcing Divine things. Now in the execution of any action there are beginners and leaders; as in singing, the precentors; and in war, generals and officers; this belongs to the “Principalities.” There are others who simply execute what is to be done; and these are the “Angels.” Others hold a middle place; and these are the “Archangels,” as above explained.

This explanation of the orders is quite a reasonable

one. For the highest in an inferior order always has affinity to the lowest in the higher order; as the lowest animals are near to the plants. Now the first order is that of the Divine Persons, which terminates in the Holy Ghost, Who is Love proceeding, with Whom the highest order of the first hierarchy has affinity, denominated as it is from the fire of love. The lowest order of the first hierarchy is that of the "Thrones," who in their own order are akin to the "Dominations"; for the "Thrones," according to Gregory (Hom. xxiv in Ev.), are so called "because through them God accomplishes His judgments," since they are enlightened by Him in a manner adapted to the immediate enlightening of the second hierarchy, to which belongs the disposition of the Divine ministrations. The order of the "Powers" is akin to the order of the "Principlalities"; for as it belongs to the "Powers" to impose order on those subject to them, this ordering is plainly shown at once in the name of "Principlalities," who, as presiding over the government of peoples and kingdoms (which occupies the first and principal place in the Divine ministrations), are the first in the execution thereof; "for the good of a nation is more divine than the good of one man" (Ethic. i, 2); and hence it is written, "The prince of the kingdom of the Persians resisted me" (Dan. 10:13).

The disposition of the orders which is mentioned by Gregory is also reasonable. For since the "Dominations" appoint and order what belongs to the Divine ministrations, the orders subject to them are arranged according to the disposition of those things in which the Divine ministrations are effected. Still, as Augustine says (De Trin. iii), "bodies are ruled in a certain order; the inferior by the superior; and all of them by the spiritual creature, and the bad spirit by the good spirit." So the first order after the "Dominations" is called that of "Principlalities," who rule even over good spirits; then the "Powers," who coerce the evil spirits; even as evil-doers are coerced by earthly powers, as it is written

(Rom. 13:3,4). After these come the "Virtues," which have power over corporeal nature in the working of miracles; after these are the "Angels" and the "Archangels," who announce to men either great things above reason, or small things within the purview of reason.

Reply to Objection 1. The angel's subjection to God is greater than their presiding over inferior things; and the latter is derived from the former. Thus the orders which derive their name from presiding are not the first and highest; but rather the orders deriving their name from their nearness and relation to God.

Reply to Objection 2. The nearness to God designated by the name of the "Thrones," belongs also to the "Cherubim" and "Seraphim," and in a more excellent way, as above explained.

Reply to Objection 3. As above explained (q. 27, a. 3), knowledge takes place accordingly as the thing known is in the knower; but love as the lover is united to the object loved. Now higher things are in a nobler way in themselves than in lower things; whereas lower things are in higher things in a nobler way than they are in themselves. Therefore to know lower things is better than to love them; and to love the higher things, God above all, is better than to know them.

Reply to Objection 4. A careful comparison will show that little or no difference exists in reality between the dispositions of the orders according to Dionysius and Gregory. For Gregory expounds the name "Principlalities" from their "presiding over good spirits," which also agrees with the "Virtues" accordingly as this name expressed a certain strength, giving efficacy to the inferior spirits in the execution of the Divine ministrations. Again, according to Gregory, the "Virtues" seem to be the same as "Principlalities" of Dionysius. For to work miracles holds the first place in the Divine ministrations; since thereby the way is prepared for the announcements of the "Archangels" and the "Angels."

Whether the orders will outlast the Day of Judgment?

Ia q. 108 a. 7

Objection 1. It would seem that the orders of angels will not outlast the Day of Judgment. For the Apostle says (1 Cor. 15:24), that Christ will "bring to naught all principality and power, when He shall have delivered up the kingdom to God and the Father," and this will be in the final consummation. Therefore for the same reason all others will be abolished in that state.

Objection 2. Further, to the office of the angelic orders it belongs to cleanse, enlighten, and perfect. But after the Day of Judgment one angel will not cleanse, enlighten, or perfect another, because they will not advance any more in knowledge. Therefore the angelic orders would remain for no purpose.

Objection 3. Further, the Apostle says of the angels (Heb. 1:14), that "they are all ministering spirits, sent to minister to them who shall receive the inheritance of

salvation"; whence it appears that the angelic offices are ordered for the purpose of leading men to salvation. But all the elect are in pursuit of salvation until the Day of Judgment. Therefore the angelic offices and orders will not outlast the Day of Judgment.

On the contrary, It is written (Judges 5:20): "Stars remaining in their order and courses," which is applied to the angels. Therefore the angels will ever remain in their orders.

I answer that, In the angelic orders we may consider two things; the distinction of grades, and the execution of their offices. The distinction of grades among the angels takes place according to the difference of grace and nature, as above explained (a. 4); and these differences will ever remain in the angels; for these differences of natures cannot be taken from them unless

they themselves be corrupted. The difference of glory will also ever remain in them according to the difference of preceding merit. As to the execution of the angelic offices, it will to a certain degree remain after the Day of Judgment, and to a certain degree will cease. It will cease accordingly as their offices are directed towards leading others to their end; but it will remain, accordingly as it agrees with the attainment of the end. Thus also the various ranks of soldiers have different duties to perform in battle and in triumph.

Reply to Objection 1. The principalities and powers will come to an end in that final consummation as regards their office of leading others to their end; because when the end is attained, it is no longer necessary to tend towards the end. This is clear from the words of the Apostle, "When He shall have delivered up the kingdom of God and the Father," i.e. when He shall have led the faithful to the enjoyment of God Himself.

Reply to Objection 2. The actions of angels over the other angels are to be considered according to a likeness to our own intellectual actions. In ourselves we find many intellectual actions which are ordered accord-

ing to the order of cause and effect; as when we gradually arrive at one conclusion by many middle terms. Now it is manifest that the knowledge of a conclusion depends on all the preceding middle terms not only in the new acquisition of knowledge, but also as regards the keeping of the knowledge acquired. A proof of this is that when anyone forgets any of the preceding middle terms he can have opinion or belief about the conclusion, but not knowledge; as he is ignorant of the order of the causes. So, since the inferior angels know the types of the Divine works by the light of the superior angels, their knowledge depends on the light of the superior angels not only as regards the acquisition of knowledge, but also as regards the preserving of the knowledge possessed. So, although after the Judgment the inferior angels will not progress in the knowledge of some things, still this will not prevent their being enlightened by the superior angels.

Reply to Objection 3. Although after the Day of Judgment men will not be led any more to salvation by the ministry of the angels, still those who are already saved will be enlightened through the angelic ministry.

Whether men are taken up into the angelic orders?

Ia q. 108 a. 8

Objection 1. It would seem that men are not taken up into the orders of the angels. For the human hierarchy is stationed beneath the lowest heavenly hierarchy, as the lowest under the middle hierarchy and the middle beneath the first. But the angels of the lowest hierarchy are never transferred into the middle, or the first. Therefore neither are men transferred to the angelic orders.

Objection 2. Further, certain offices belong to the orders of the angels, as to guard, to work miracles, to coerce the demons, and the like; which do not appear to belong to the souls of the saints. Therefore they are not transferred to the angelic orders.

Objection 3. Further, as the good angels lead on to good, so do the demons to what is evil. But it is erroneous to say that the souls of bad men are changed into demons; for Chrysostom rejects this (Hom. xxviii in Matt.). Therefore it does not seem that the souls of the saints will be transferred to the orders of angels.

On the contrary, The Lord says of the saints that, "they will be as the angels of God" (Mat. 22:30). I answer that, As above explained (Aa. 4,7), the orders of the angels are distinguished according to the conditions of nature and according to the gifts of grace. Considered only as regards the grade of nature, men can in no way be assumed into the angelic orders; for the natural distinction will always remain. In view of this distinction, some asserted that men can in no way be transferred to an equality with the angels; but this is erroneous, contradicting as it does the promise of Christ saying that the children of the resurrection will be equal to the angels in heaven (Lk. 20:36). For whatever belongs to nature is the material part of an order; whilst that which per-

fects is from grace which depends on the liberality of God, and not on the order of nature. Therefore by the gift of grace men can merit glory in such a degree as to be equal to the angels, in each of the angelic grades; and this implies that men are taken up into the orders of the angels. Some, however, say that not all who are saved are assumed into the angelic orders, but only virgins or the perfect; and that the other will constitute their own order, as it were, corresponding to the whole society of the angels. But this is against what Augustine says (De Civ. Dei xii, 9), that "there will not be two societies of men and angels, but only one; because the beatitude of all is to cleave to God alone."

Reply to Objection 1. Grace is given to the angels in proportion to their natural gifts. This, however, does not apply to men, as above explained (a. 4; q. 62, a. 6). So, as the inferior angels cannot be transferred to the natural grade of the superior, neither can they be transferred to the superior grade of grace; whereas men can ascend to the grade of grace, but not of nature.

Reply to Objection 2. The angels according to the order of nature are between us and God; and therefore according to the common law not only human affairs are administered by them, but also all corporeal matters. But holy men even after this life are of the same nature with ourselves; and hence according to the common law they do not administer human affairs, "nor do they interfere in the things of the living," as Augustine says (De cura pro mortuis xiii, xvi). Still, by a certain special dispensation it is sometimes granted to some of the saints to exercise these offices; by working miracles, by coercing the demons, or by doing something of that

kind, as Augustine says (*De cura pro mortuis* xvi).

Reply to Objection 3. It is not erroneous to say that men are transferred to the penalty of demons; but some

erroneously stated that the demons are nothing but souls of the dead; and it is this that Chrysostom rejects.

Objection 1. It would seem that all the angels belong to one hierarchy. For since the angels are supreme among creatures, it is evident that they are ordered for the best. But the best ordering of a multitude is for it to be governed by one authority, as the Philosopher shows (*Metaph.* xii, *Did.* xi, 10; *Polit.* iii, 4). Therefore as a hierarchy is nothing but a sacred principality, it seems that all the angels belong to one hierarchy.

Objection 2. Further, Dionysius says (*Coel. Hier.* iii) that “hierarchy is order, knowledge, and action.” But all the angels agree in one order towards God, Whom they know, and by Whom in their actions they are ruled. Therefore all the angels belong to one hierarchy.

Objection 3. Further, the sacred principality called hierarchy is to be found among men and angels. But all men are of one hierarchy. Therefore likewise all the angels are of one hierarchy.

On the contrary, Dionysius (*Coel. Hier.* vi) distinguishes three hierarchies of angels.

I answer that, Hierarchy means a “sacred” principality, as above explained. Now principality includes two things: the prince himself and the multitude ordered under the prince. Therefore because there is one God, the Prince not only of all the angels but also of men and all creatures; so there is one hierarchy, not only of all the angels, but also of all rational creatures, who can be participators of sacred things; according to Augustine (*De Civ. Dei* xii, 1): “There are two cities, that is, two societies, one of the good angels and men, the other of the wicked.” But if we consider the principality on the part of the multitude ordered under the prince, then principality is said to be “one” accordingly as the multitude can be subject in “one” way to the government of the prince. And those that cannot be governed in the same way by a prince belong to different principalities: thus, under one king there are different cities, which are governed by different laws and administrators. Now it is evident that men do not receive the Divine enlightenments in the same way as do the angels; for the angels receive them in their intelligible purity, whereas men receive them under sensible signs, as Dionysius says (*Coel. Hier.* i). Therefore there must needs be a distinction between the human and the angelic hierarchy.

In the same manner we distinguish three angelic hierarchies. For it was shown above (q. 55, a. 3), in treating of the angelic knowledge, that the superior angels have a more universal knowledge of the truth than the inferior angels. This universal knowledge has three grades among the angels. For the types of things, concerning which the angels are enlightened, can be considered in a threefold manner. First as preceding from God as the first universal principle, which mode of knowledge belongs to the first hierarchy, connected immediately with God, and, “as it were, placed in the vestibule of God,” as Dionysius says (*Coel. Hier.* vii). Secondly, forasmuch as these types depend on the universal created causes which in some way are already multiplied; which mode belongs to the second hierarchy. Thirdly, forasmuch as these types are applied to particular things as depending on their causes; which mode belongs to the lowest hierarchy. All this will appear more clearly when we treat of each of the orders (a. 6). In this way are the hierarchies distinguished on the part of the multitude of subjects.

Hence it is clear that those err and speak against the opinion of Dionysius who place a hierarchy in the Divine Persons, and call it the “supercelestial” hierarchy. For in the Divine Persons there exists, indeed, a natural order, but there is no hierarchical order, for as Dionysius says (*Coel. Hier.* iii): “The hierarchical order is so directed that some be cleansed, enlightened, and perfected; and that others cleanse, enlighten, and perfect”; which far be it from us to apply to the Divine Persons.

Reply to Objection 1. This objection considers principality on the part of the ruler, inasmuch as a multitude is best ruled by one ruler, as the Philosopher asserts in those passages.

Reply to Objection 2. As regards knowing God Himself, Whom all see in one way—that is, in His essence—there is no hierarchical distinction among the angels; but there is such a distinction as regards the types of created things, as above explained.

Reply to Objection 3. All men are of one species, and have one connatural mode of understanding; which is not the case in the angels: and hence the same argument does not apply to both.

Objection 1. It would seem that in the one hierarchy there are not several orders. For when a definition is multiplied, the thing defined is also multiplied. But hierarchy is order, as Dionysius says (Coel. Hier. iii). Therefore, if there are many orders, there is not one hierarchy only, but many.

Objection 2. Further, different orders are different grades, and grades among spirits are constituted by different spiritual gifts. But among the angels all the spiritual gifts are common to all, for “nothing is possessed individually” (Sent. ii, D, ix). Therefore there are not different orders of angels.

Objection 3. Further, in the ecclesiastical hierarchy the orders are distinguished according to the actions of “cleansing,” “enlightening,” and “perfecting.” For the order of deacons is “cleansing,” the order of priests, is “enlightening,” and of bishops “perfecting,” as Dionysius says (Eccl. Hier. v). But each of the angels cleanses, enlightens, and perfects. Therefore there is no distinction of orders among the angels.

On the contrary, The Apostle says (Eph. 1:20,21) that “God has set the Man Christ above all principality and power, and virtue, and dominion”: which are the various orders of the angels, and some of them belong to one hierarchy, as will be explained (a. 6).

I answer that, As explained above, one hierarchy is one principality—that is, one multitude ordered in one way under the rule of a prince. Now such a multitude would not be ordered, but confused, if there were not in it different orders. So the nature of a hierarchy requires diversity of orders.

This diversity of order arises from the diversity of offices and actions, as appears in one city where there are different orders according to the different actions; for there is one order of those who judge, and another of those who fight, and another of those who labor in the fields, and so forth.

But although one city thus comprises several orders, all may be reduced to three, when we consider that every multitude has a beginning, a middle, and an end.

So in every city, a threefold order of men is to be seen, some of whom are supreme, as the nobles; others are the last, as the common people, while others hold a place between these, as the middle-class [populus honorabilis]. In the same way we find in each angelic hierarchy the orders distinguished according to their actions and offices, and all this diversity is reduced to three—namely, to the summit, the middle, and the base; and so in every hierarchy Dionysius places three orders (Coel. Hier. vi).

Reply to Objection 1. Order is twofold. In one way it is taken as the order comprehending in itself different grades; and in that way a hierarchy is called an order. In another way one grade is called an order; and in that sense the several orders of one hierarchy are so called.

Reply to Objection 2. All things are possessed in common by the angelic society, some things, however, being held more excellently by some than by others. Each gift is more perfectly possessed by the one who can communicate it, than by the one who cannot communicate it; as the hot thing which can communicate heat is more perfect than what is unable to give heat. And the more perfectly anyone can communicate a gift, the higher grade he occupies, as he is in the more perfect grade of mastership who can teach a higher science. By this similitude we can reckon the diversity of grades or orders among the angels, according to their different offices and actions.

Reply to Objection 3. The inferior angel is superior to the highest man of our hierarchy, according to the words, “He that is the lesser in the kingdom of heaven, is greater than he”—namely, John the Baptist, than whom “there hath not risen a greater among them that are born of women” (Mat. 11:11). Hence the lesser angel of the heavenly hierarchy can not only cleanse, but also enlighten and perfect, and in a higher way than can the orders of our hierarchy. Thus the heavenly orders are not distinguished by reason of these, but by reason of other different acts.

Objection 1. It seems that there are not many angels in one order. For it was shown above (q. 50, a. 4), that all the angels are unequal. But equals belong to one order. Therefore there are not many angels in one order.

Objection 2. Further, it is superfluous for a thing to be done by many, which can be done sufficiently by one. But that which belongs to one angelic office can be done sufficiently by one angel; so much more sufficiently than the one sun does what belongs to the office of the sun, as the angel is more perfect than a heavenly body. If, therefore, the orders are distinguished by their offices, as stated above (a. 2), several angels in one order would be superfluous.

Objection 3. Further, it was said above (obj. 1) that all the angels are unequal. Therefore, if several angels (for instance, three or four), are of one order, the lowest one of the superior order will be more akin to the highest of the inferior order than with the highest of his own order; and thus he does not seem to be more of one order with the latter than with the former. Therefore there are not many angels of one order.

On the contrary, It is written: “The Seraphim cried to one another” (Is. 6:3). Therefore there are many angels in the one order of the Seraphim.

I answer that, Whoever knows anything perfectly, is able to distinguish its acts, powers, and nature, down to the minutest details, whereas he who knows a thing in an imperfect manner can only distinguish it in a general way, and only as regards a few points. Thus, one who knows natural things imperfectly, can distinguish their orders in a general way, placing the heavenly bodies in

one order, inanimate inferior bodies in another, plants in another, and animals in another; whilst he who knows natural things perfectly, is able to distinguish different orders in the heavenly bodies themselves, and in each of the other orders.

Now our knowledge of the angels is imperfect, as Dionysius says (Coel. Hier. vi). Hence we can only distinguish the angelic offices and orders in a general way, so as to place many angels in one order. But if we knew the offices and distinctions of the angels perfectly, we should know perfectly that each angel has his own office and his own order among things, and much more so than any star, though this be hidden from us.

Reply to Objection 1. All the angels of one order are in some way equal in a common similitude, whereby they are placed in that order; but absolutely speaking they are not equal. Hence Dionysius says (Coel. Hier. x) that in one and the same order of angels there are those who are first, middle, and last.

Reply to Objection 2. That special distinction of orders and offices wherein each angel has his own office and order, is hidden from us.

Reply to Objection 3. As in a surface which is partly white and partly black, the two parts on the borders of white and black are more akin as regards their position than any other two white parts, but are less akin in quality; so two angels who are on the boundary of two orders are more akin in propinquity of nature than one of them is akin to the others of its own order, but less akin in their fitness for similar offices, which fitness, indeed, extends to a definite limit.

Objection 1. It would seem that the distinction of hierarchies and of orders is not from the nature of the angels. For hierarchy is “a sacred principality,” and Dionysius places in its definition that it “approaches a resemblance to God, as far as may be” (Coel. Hier. iii). But sanctity and resemblance to God is in the angels by grace, and not by nature. Therefore the distinction of hierarchies and orders in the angels is by grace, and not by nature.

Objection 2. Further, the Seraphim are called “burning” or “kindling,” as Dionysius says (Coel. Hier. vii). This belongs to charity which comes not from nature but from grace; for “it is poured forth in our hearts by the Holy Ghost Who is given to us” (Rom. 5:5): “which is said not only of holy men, but also of the holy angels,” as Augustine says (De Civ. Dei xii). Therefore the angelic orders are not from nature, but from grace.

Objection 3. Further, the ecclesiastical hierarchy is copied from the heavenly. But the orders among men are not from nature, but by the gift of grace; for it is not a natural gift for one to be a bishop, and another a priest, and another a deacon. Therefore neither in the angels are the orders from nature, but from grace only.

On the contrary, The Master says (ii, D. 9) that “an angelic order is a multitude of heavenly spirits, who are likened to each other by some gift of grace, just as they

agree also in the participation of natural gifts.” Therefore the distinction of orders among the angels is not only by gifts of grace, but also by gifts of nature.

I answer that, The order of government, which is the order of a multitude under authority, is derived from its end. Now the end of the angels may be considered in two ways. First, according to the faculty of nature, so that they may know and love God by natural knowledge and love; and according to their relation to this end the orders of the angels are distinguished by natural gifts. Secondly, the end of the angelic multitude can be taken from what is above their natural powers, which consists in the vision of the Divine Essence, and in the unchangeable fruition of His goodness; to which end they can reach only by grace; and hence as regards this end, the orders in the angels are adequately distinguished by the gifts of grace, but dispositively by natural gifts, forasmuch as to the angels are given gratuitous gifts according to the capacity of their natural gifts; which is not the case with men, as above explained (q. 62, a. 6). Hence among men the orders are distinguished according to the gratuitous gifts only, and not according to natural gifts.

From the above the replies to the objections are evident.

Objection 1. It would seem that the orders of the angels are not properly named. For all the heavenly spirits are called angels and heavenly virtues. But common names should not be appropriated to individuals. Therefore the orders of the angels and virtues are ineptly named.

Objection 2. Further, it belongs to God alone to be Lord, according to the words, "Know ye that the Lord He is God" (Ps. 99:3). Therefore one order of the heavenly spirits is not properly called "Dominations."

Objection 3. Further, the name "Domination" seems to imply government and likewise the names "Principalities" and "Powers." Therefore these three names do not seem to be properly applied to three orders.

Objection 4. Further, archangels are as it were angel princes. Therefore this name ought not to be given to any other order than to the "Principalities."

Objection 5. Further, the name "Seraphim" is derived from ardor, which pertains to charity; and the name "Cherubim" from knowledge. But charity and knowledge are gifts common to all the angels. Therefore they ought not to be names of any particular orders.

Objection 6. Further, Thrones are seats. But from the fact that God knows and loves the rational creature He is said to sit within it. Therefore there ought not to be any order of "Thrones" besides the "Cherubim" and "Seraphim." Therefore it appears that the orders of angels are not properly styled.

On the contrary is the authority of Holy Scripture wherein they are so named. For the name "Seraphim" is found in Is. 6:2; the name "Cherubim" in Ezech. 1 (Cf. 10:15,20); "Thrones" in Col. 1:16; "Dominations," "Virtues," "Powers," and "Principalities" are mentioned in Eph. 1:21; the name "Archangels" in the canonical epistle of St. Jude (9), and the name "Angels" is found in many places of Scripture.

I answer that, As Dionysius says (Coel. Hier. vii), in the names of the angelic orders it is necessary to observe that the proper name of each order expresses its property. Now to see what is the property of each order, we must consider that in coordinated things, something may be found in a threefold manner: by way of property, by way of excess, and by way of participation. A thing is said to be in another by way of property, if it is adequate and proportionate to its nature: by excess when an attribute is less than that to which it is attributed, but is possessed thereby in an eminent manner, as we have stated (q. 13, a. 2) concerning all the names which are attributed to God: by participation, when an attribute is possessed by something not fully but partially; thus holy men are called gods by participation. Therefore, if anything is to be called by a name designating its property, it ought not to be named from what it participates imperfectly, nor from that which it possesses in excess, but from that which is adequate

thereto; as, for instance, when we wish properly to name a man, we should call him a "rational substance," but not an "intellectual substance," which latter is the proper name of an angel; because simple intelligence belongs to an angel as a property, and to man by participation; nor do we call him a "sensible substance," which is the proper name of a brute; because sense is less than the property of a man, and belongs to man in a more excellent way than to other animals.

So we must consider that in the angelic orders all spiritual perfections are common to all the angels, and that they are all more excellently in the superior than in the inferior angels. Further, as in these perfections there are grades, the superior perfection belongs to the superior order as its property, whereas it belongs to the inferior by participation; and conversely the inferior perfection belongs to the inferior order as its property, and to the superior by way of excess; and thus the superior order is denominated from the superior perfection.

So in this way Dionysius (Coel. Hier. vii) explains the names of the orders accordingly as they befit the spiritual perfections they signify. Gregory, on the other hand, in expounding these names (Hom. xxxiv in Evang.) seems to regard more the exterior ministrations; for he says that "angels are so called as announcing the least things; and the archangels in the greatest; by the virtues miracles are wrought; by the powers hostile powers are repulsed; and the principalities preside over the good spirits themselves."

Reply to Objection 1. Angel means "messenger." So all the heavenly spirits, so far as they make known Divine things, are called "angels." But the superior angels enjoy a certain excellence, as regards this manifestation, from which the superior orders are denominated. The lowest order of angels possess no excellence above the common manifestation; and therefore it is denominated from manifestation only; and thus the common name remains as it were proper to the lowest order, as Dionysius says (Coel. Hier. v). Or we may say that the lowest order can be specially called the order of "angels," forasmuch as they announce things to us immediately.

"Virtue" can be taken in two ways. First, commonly, considered as the medium between the essence and the operation, and in that sense all the heavenly spirits are called heavenly virtues, as also "heavenly essences." Secondly, as meaning a certain excellence of strength; and thus it is the proper name of an angelic order. Hence Dionysius says (Coel. Hier. viii) that the "name 'virtues' signifies a certain virile and immovable strength"; first, in regard of those Divine operations which befit them; secondly, in regard to receiving Divine gifts. Thus it signifies that they undertake fearlessly the Divine behests appointed to them; and this seems to imply strength of mind.

Reply to Objection 2. As Dionysius says (Div.

Nom. xii): “Dominion is attributed to God in a special manner, by way of excess: but the Divine word gives the more illustrious heavenly princes the name of Lord by participation, through whom the inferior angels receive the Divine gifts.” Hence Dionysius also states (Coel. Hier. viii) that the name “Domination” means first “a certain liberty, free from servile condition and common subjection, such as that of plebeians, and from tyrannical oppression,” endured sometimes even by the great. Secondly, it signifies “a certain rigid and inflexible supremacy which does not bend to any servile act, or to the act, of those who are subject to or oppressed by tyrants.” Thirdly, it signifies “the desire and participation of the true dominion which belongs to God.” Likewise the name of each order signifies the participation of what belongs to God; as the name “Virtues” signifies the participation of the Divine virtue; and the same principle applies to the rest.

Reply to Objection 3. The names “Domination,” “Power,” and “Principality” belong to government in different ways. The place of a lord is only to prescribe what is to be done. So Gregory says (Hom. xxiv in Evang.), that “some companies of the angels, because others are subject to obedience to them, are called dominations.” The name “Power” points out a kind of order, according to what the Apostle says, “He that resisteth the power, resisteth the ordination of God” (Rom. 13:2). And so Dionysius says (Coel. Hier. viii) that the name “Power” signifies a kind of ordination both as regards the reception of Divine things, and as regards the Divine actions performed by superiors towards inferiors by leading them to things above. Therefore, to the order of “Powers” it belongs to regulate what is to be done by those who are subject to them. To preside [principari] as Gregory says (Hom. xxiv in Ev.) is “to be first among others,” as being first in carrying out what is ordered to be done. And so Dionysius says (Coel. Hier. ix) that the name of “Principality” signifies “one who leads in a sacred order.” For those who lead others, being first among them, are properly called “princes,” according to the words, “Princes went before joined with singers” (Ps. 67:26).

Reply to Objection 4. The “Archangels,” according to Dionysius (Coel. Hier. ix), are between the “Principality” and the “Angels.” A medium compared to one extreme seems like the other, as participating in the nature of both extremes; thus tepid seems cold compared to hot, and hot compared to cold. So the “Archangels” are called the “angel princes”; forasmuch as they are princes as regards the “Angels,” and angels as regards the Principality. But according to Gregory (Hom. xxiv in Ev.) they are called “Archangels,” because they preside over the one order of the “Angels”; as it were, announcing greater things: and the “Principality” are so called as presiding over all the heavenly “Virtues” who

fulfil the Divine commands.

Reply to Objection 5. The name “Seraphim” does not come from charity only, but from the excess of charity, expressed by the word ardor or fire. Hence Dionysius (Coel. Hier. vii) expounds the name “Seraphim” according to the properties of fire, containing an excess of heat. Now in fire we may consider three things. First, the movement which is upwards and continuous. This signifies that they are borne inflexibly towards God. Secondly, the active force which is “heat,” which is not found in fire simply, but exists with a certain sharpness, as being of most penetrating action, and reaching even to the smallest things, and as it were, with superabundant fervor; whereby is signified the action of these angels, exercised powerfully upon those who are subject to them, rousing them to a like fervor, and cleansing them wholly by their heat. Thirdly we consider in fire the quality of clarity, or brightness; which signifies that these angels have in themselves an inextinguishable light, and that they also perfectly enlighten others.

In the same way the name “Cherubim” comes from a certain excess of knowledge; hence it is interpreted “fulness of knowledge,” which Dionysius (Coel. Hier. vii) expounds in regard to four things: the perfect vision of God; the full reception of the Divine Light; their contemplation in God of the beauty of the Divine order; and in regard to the fact that possessing this knowledge fully, they pour it forth copiously upon others.

Reply to Objection 6. The order of the “Thrones” excels the inferior orders as having an immediate knowledge of the types of the Divine works; whereas the “Cherubim” have the excellence of knowledge and the “Seraphim” the excellence of ardor. And although these two excellent attributes include the third, yet the gift belonging to the “Thrones” does not include the other two; and so the order of the “Thrones” is distinguished from the orders of the “Cherubim” and the “Seraphim.” For it is a common rule in all things that the excellence of the inferior is contained in the superior, but not conversely. But Dionysius (Coel. Hier. vii) explains the name “Thrones” by its relation to material seats, in which we may consider four things. First, the site; because seats are raised above the earth, and to the angels who are called “Thrones” are raised up to the immediate knowledge of the types of things in God. Secondly, because in material seats is displayed strength, forasmuch as a person sits firmly on them. But here the reverse is the case; for the angels themselves are made firm by God. Thirdly, because the seat receives him who sits thereon, and he can be carried thereupon; and so the angels receive God in themselves, and in a certain way bear Him to the inferior creatures. Fourthly, because in its shape, a seat is open on one side to receive the sitter; and thus are the angels promptly open to receive God and to serve Him.

Objection 1. It would seem that the grades of the orders are not properly assigned. For the order of prelates is the highest. But the names of “Dominations,” “Principalities,” and “Powers” of themselves imply prelacy. Therefore these orders ought not to be supreme.

Objection 2. Further, the nearer an order is to God, the higher it is. But the order of “Thrones” is the nearest to God; for nothing is nearer to the sitter than the seat. Therefore the order of the “Thrones” is the highest.

Objection 3. Further, knowledge comes before love, and intellect is higher than will. Therefore the order of “Cherubim” seems to be higher than the “Seraphim.”

Objection 4. Further, Gregory (Hom. xxiv in Evang.) places the “Principalities” above the “Powers.” These therefore are not placed immediately above the Archangels, as Dionysius says (Coel. Hier. ix).

On the contrary, Dionysius (Coel. Hier. vii), places in the highest hierarchy the “Seraphim” as the first, the “Cherubim” as the middle, the “Thrones” as the last; in the middle hierarchy he places the “Dominations,” as the first, the “Virtues” in the middle, the “Powers” last; in the lowest hierarchy the “Principalities” first, then the “Archangels,” and lastly the “Angels.”

I answer that, The grades of the angelic orders are assigned by Gregory (Hom. xxiv in Ev.) and Dionysius (Coel. Hier. vii), who agree as regards all except the “Principalities” and “Virtues.” For Dionysius places the “Virtues” beneath the “Dominations,” and above the “Powers”; the “Principalities” beneath the “Powers” and above the “Archangels.” Gregory, however, places the “Principalities” between the “Dominations” and the “Powers”; and the “Virtues” between the “Powers” and the “Archangels.” Each of these placings may claim authority from the words of the Apostle, who (Eph. 1:20,21) enumerates the middle orders, beginning from the lowest saying that “God set Him,” i.e. Christ, “on His right hand in the heavenly places above all Principality and Power, and Virtue, and Dominion.” Here he places “Virtues” between “Powers” and “Dominations,” according to the placing of Dionysius. Writing however to the Colossians (1:16), numbering the same orders from the highest, he says: “Whether Thrones, or Dominations, or Principalities, or Powers, all things were created by Him and in Him.” Here he places the “Principalities” between “Dominations” and “Powers,” as does also Gregory.

Let us then first examine the reason for the ordering of Dionysius, in which we see, that, as said above (a. 1), the highest hierarchy contemplates the ideas of things in God Himself; the second in the universal causes; and third in their application to particular effects. And because God is the end not only of the angelic ministrations, but also of the whole creation, it belongs to the first hierarchy to consider the end; to the middle one

belongs the universal disposition of what is to be done; and to the last belongs the application of this disposition to the effect, which is the carrying out of the work; for it is clear that these three things exist in every kind of operation. So Dionysius, considering the properties of the orders as derived from their names, places in the first hierarchy those orders the names of which are taken from their relation to God, the “Seraphim,” “Cherubim,” and “Thrones”; and he places in the middle hierarchy those orders whose names denote a certain kind of common government or disposition—the “Dominations,” “Virtues,” and “Powers”; and he places in the third hierarchy the orders whose names denote the execution of the work, the “Principalities,” “Angels,” and “Archangels.”

As regards the end, three things may be considered. For firstly we consider the end; then we acquire perfect knowledge of the end; thirdly, we fix our intention on the end; of which the second is an addition to the first, and the third an addition to both. And because God is the end of creatures, as the leader is the end of an army, as the Philosopher says (Metaph. xii, Did. xi, 10); so a somewhat similar order may be seen in human affairs. For there are some who enjoy the dignity of being able with familiarity to approach the king or leader; others in addition are privileged to know his secrets; and others above these ever abide with him, in a close union. According to this similitude, we can understand the disposition in the orders of the first hierarchy; for the “Thrones” are raised up so as to be the familiar recipients of God in themselves, in the sense of knowing immediately the types of things in Himself; and this is proper to the whole of the first hierarchy. The “Cherubim” know the Divine secrets supereminently; and the “Seraphim” excel in what is the supreme excellence of all, in being united to God Himself; and all this in such a manner that the whole of this hierarchy can be called the “Thrones”; as, from what is common to all the heavenly spirits together, they are all called “Angels.”

As regards government, three things are comprised therein, the first of which is to appoint those things which are to be done, and this belongs to the “Dominations”; the second is to give the power of carrying out what is to be done, which belongs to the “Virtues”; the third is to order how what has been commanded or decided to be done can be carried out by others, which belongs to the “Powers.”

The execution of the angelic ministrations consists in announcing Divine things. Now in the execution of any action there are beginners and leaders; as in singing, the precentors; and in war, generals and officers; this belongs to the “Principalities.” There are others who simply execute what is to be done; and these are the “Angels.” Others hold a middle place; and these are the “Archangels,” as above explained.

This explanation of the orders is quite a reasonable

one. For the highest in an inferior order always has affinity to the lowest in the higher order; as the lowest animals are near to the plants. Now the first order is that of the Divine Persons, which terminates in the Holy Ghost, Who is Love proceeding, with Whom the highest order of the first hierarchy has affinity, denominated as it is from the fire of love. The lowest order of the first hierarchy is that of the "Thrones," who in their own order are akin to the "Dominations"; for the "Thrones," according to Gregory (Hom. xxiv in Ev.), are so called "because through them God accomplishes His judgments," since they are enlightened by Him in a manner adapted to the immediate enlightening of the second hierarchy, to which belongs the disposition of the Divine ministrations. The order of the "Powers" is akin to the order of the "Principalities"; for as it belongs to the "Powers" to impose order on those subject to them, this ordering is plainly shown at once in the name of "Principalities," who, as presiding over the government of peoples and kingdoms (which occupies the first and principal place in the Divine ministrations), are the first in the execution thereof; "for the good of a nation is more divine than the good of one man" (Ethic. i, 2); and hence it is written, "The prince of the kingdom of the Persians resisted me" (Dan. 10:13).

The disposition of the orders which is mentioned by Gregory is also reasonable. For since the "Dominations" appoint and order what belongs to the Divine ministrations, the orders subject to them are arranged according to the disposition of those things in which the Divine ministrations are effected. Still, as Augustine says (De Trin. iii), "bodies are ruled in a certain order; the inferior by the superior; and all of them by the spiritual creature, and the bad spirit by the good spirit." So the first order after the "Dominations" is called that of "Principalities," who rule even over good spirits; then the "Powers," who coerce the evil spirits; even as evildoers are coerced by earthly powers, as it is written

(Rom. 13:3,4). After these come the "Virtues," which have power over corporeal nature in the working of miracles; after these are the "Angels" and the "Archangels," who announce to men either great things above reason, or small things within the purview of reason.

Reply to Objection 1. The angel's subjection to God is greater than their presiding over inferior things; and the latter is derived from the former. Thus the orders which derive their name from presiding are not the first and highest; but rather the orders deriving their name from their nearness and relation to God.

Reply to Objection 2. The nearness to God designated by the name of the "Thrones," belongs also to the "Cherubim" and "Seraphim," and in a more excellent way, as above explained.

Reply to Objection 3. As above explained (q. 27, a. 3), knowledge takes place accordingly as the thing known is in the knower; but love as the lover is united to the object loved. Now higher things are in a nobler way in themselves than in lower things; whereas lower things are in higher things in a nobler way than they are in themselves. Therefore to know lower things is better than to love them; and to love the higher things, God above all, is better than to know them.

Reply to Objection 4. A careful comparison will show that little or no difference exists in reality between the dispositions of the orders according to Dionysius and Gregory. For Gregory expounds the name "Principalities" from their "presiding over good spirits," which also agrees with the "Virtues" accordingly as this name expressed a certain strength, giving efficacy to the inferior spirits in the execution of the Divine ministrations. Again, according to Gregory, the "Virtues" seem to be the same as "Principalities" of Dionysius. For to work miracles holds the first place in the Divine ministrations; since thereby the way is prepared for the announcements of the "Archangels" and the "Angels."

Objection 1. It would seem that the orders of angels will not outlast the Day of Judgment. For the Apostle says (1 Cor. 15:24), that Christ will “bring to naught all principality and power, when He shall have delivered up the kingdom to God and the Father,” and this will be in the final consummation. Therefore for the same reason all others will be abolished in that state.

Objection 2. Further, to the office of the angelic orders it belongs to cleanse, enlighten, and perfect. But after the Day of Judgment one angel will not cleanse, enlighten, or perfect another, because they will not advance any more in knowledge. Therefore the angelic orders would remain for no purpose.

Objection 3. Further, the Apostle says of the angels (Heb. 1:14), that “they are all ministering spirits, sent to minister to them who shall receive the inheritance of salvation”; whence it appears that the angelic offices are ordered for the purpose of leading men to salvation. But all the elect are in pursuit of salvation until the Day of Judgment. Therefore the angelic offices and orders will not outlast the Day of Judgment.

On the contrary, It is written (Judges 5:20): “Stars remaining in their order and courses,” which is applied to the angels. Therefore the angels will ever remain in their orders.

I answer that, In the angelic orders we may consider two things; the distinction of grades, and the execution of their offices. The distinction of grades among the angels takes place according to the difference of grace and nature, as above explained (a. 4); and these differences will ever remain in the angels; for these differences of natures cannot be taken from them unless they themselves be corrupted. The difference of glory will also ever remain in them according to the difference of preceding merit. As to the execution of the angelic offices, it will to a certain degree remain after the Day of Judgment, and to a certain degree will cease. It will cease accordingly as their offices are directed towards

leading others to their end; but it will remain, accordingly as it agrees with the attainment of the end. Thus also the various ranks of soldiers have different duties to perform in battle and in triumph.

Reply to Objection 1. The principalities and powers will come to an end in that final consummation as regards their office of leading others to their end; because when the end is attained, it is no longer necessary to tend towards the end. This is clear from the words of the Apostle, “When He shall have delivered up the kingdom of God and the Father,” i.e. when He shall have led the faithful to the enjoyment of God Himself.

Reply to Objection 2. The actions of angels over the other angels are to be considered according to a likeness to our own intellectual actions. In ourselves we find many intellectual actions which are ordered according to the order of cause and effect; as when we gradually arrive at one conclusion by many middle terms. Now it is manifest that the knowledge of a conclusion depends on all the preceding middle terms not only in the new acquisition of knowledge, but also as regards the keeping of the knowledge acquired. A proof of this is that when anyone forgets any of the preceding middle terms he can have opinion or belief about the conclusion, but not knowledge; as he is ignorant of the order of the causes. So, since the inferior angels know the types of the Divine works by the light of the superior angels, their knowledge depends on the light of the superior angels not only as regards the acquisition of knowledge, but also as regards the preserving of the knowledge possessed. So, although after the Judgment the inferior angels will not progress in the knowledge of some things, still this will not prevent their being enlightened by the superior angels.

Reply to Objection 3. Although after the Day of Judgment men will not be led any more to salvation by the ministry of the angels, still those who are already saved will be enlightened through the angelic ministry.

Objection 1. It would seem that men are not taken up into the orders of the angels. For the human hierarchy is stationed beneath the lowest heavenly hierarchy, as the lowest under the middle hierarchy and the middle beneath the first. But the angels of the lowest hierarchy are never transferred into the middle, or the first. Therefore neither are men transferred to the angelic orders.

Objection 2. Further, certain offices belong to the orders of the angels, as to guard, to work miracles, to coerce the demons, and the like; which do not appear to belong to the souls of the saints. Therefore they are not transferred to the angelic orders.

Objection 3. Further, as the good angels lead on to good, so do the demons to what is evil. But it is erroneous to say that the souls of bad men are changed into demons; for Chrysostom rejects this (Hom. xxviii in Matt.). Therefore it does not seem that the souls of the saints will be transferred to the orders of angels.

On the contrary, The Lord says of the saints that, “they will be as the angels of God” (Mat. 22:30). I answer that, As above explained (Aa. 4,7), the orders of the angels are distinguished according to the conditions of nature and according to the gifts of grace. Considered only as regards the grade of nature, men can in no way be assumed into the angelic orders; for the natural distinction will always remain. In view of this distinction, some asserted that men can in no way be transferred to an equality with the angels; but this is erroneous, contradicting as it does the promise of Christ saying that the children of the resurrection will be equal to the angels in heaven (Lk. 20:36). For whatever belongs to nature is the material part of an order; whilst that which perfects is from grace which depends on the liberality of God, and not on the order of nature. Therefore by the gift of grace men can merit glory in such a degree as to

be equal to the angels, in each of the angelic grades; and this implies that men are taken up into the orders of the angels. Some, however, say that not all who are saved are assumed into the angelic orders, but only virgins or the perfect; and that the other will constitute their own order, as it were, corresponding to the whole society of the angels. But this is against what Augustine says (De Civ. Dei xii, 9), that “there will not be two societies of men and angels, but only one; because the beatitude of all is to cleave to God alone.”

Reply to Objection 1. Grace is given to the angels in proportion to their natural gifts. This, however, does not apply to men, as above explained (a. 4; q. 62, a. 6). So, as the inferior angels cannot be transferred to the natural grade of the superior, neither can they be transferred to the superior grade of grace; whereas men can ascend to the grade of grace, but not of nature.

Reply to Objection 2. The angels according to the order of nature are between us and God; and therefore according to the common law not only human affairs are administered by them, but also all corporeal matters. But holy men even after this life are of the same nature with ourselves; and hence according to the common law they do not administer human affairs, “nor do they interfere in the things of the living,” as Augustine says (De cura pro mortuis xiii, xvi). Still, by a certain special dispensation it is sometimes granted to some of the saints to exercise these offices; by working miracles, by coercing the demons, or by doing something of that kind, as Augustine says (De cura pro mortuis xvi).

Reply to Objection 3. It is not erroneous to say that men are transferred to the penalty of demons; but some erroneously stated that the demons are nothing but souls of the dead; and it is this that Chrysostom rejects.

FIRST PART, QUESTION 109

The Ordering of the Bad Angels (In Four Articles)

We now consider the ordering of the bad angels; concerning which there are four points of inquiry:

- (1) Whether there are orders among the demons?
- (2) Whether among them there is precedence?
- (3) Whether one enlightens another?
- (4) Whether they are subject to the precedence of the good angels?

Whether there are orders among the demons?

Ia q. 109 a. 1

Objection 1. It would seem that there are no orders among the demons. For order belongs to good, as also mode, and species, as Augustine says (*De Nat. Boni* iii); and on the contrary, disorder belongs to evil. But there is nothing disorderly in the good angels. Therefore in the bad angels there are no orders.

Objection 2. Further, the angelic orders are contained under a hierarchy. But the demons are not in a hierarchy, which is defined as a holy principality; for they are void of all holiness. Therefore among the demons there are no orders.

Objection 3. Further, the demons fell from every one of the angelic orders; as is commonly supposed. Therefore, if some demons are said to belong to an order, as falling from that order, it would seem necessary to give them the names of each of those orders. But we never find that they are called “Seraphim,” or “Thrones,” or “Dominations.” Therefore on the same ground they are not to be placed in any other order.

On the contrary, The Apostle says (Eph. 6:12): “Our wrestling... is against principalities and powers, against the rulers of the world of this darkness.”

I answer that, As explained above (q. 108, Aa. 4,7,8), order in the angels is considered both according to the grade of nature; and according to that of grace. Now grace has a twofold state, the imperfect, which is that of merit; and the perfect, which is that of

consummate glory.

If therefore we consider the angelic orders in the light of the perfection of glory, then the demons are not in the angelic orders, and never were. But if we consider them in relation to imperfect grace, in that view the demons were at the time in the orders of angels, but fell away from them, according to what was said above (q. 62, a. 3), that all the angels were created in grace. But if we consider them in the light of nature, in that view they are still in those orders; because they have not lost their natural gifts; as Dionysius says (*Div. Nom.* iv).

Reply to Objection 1. Good can exist without evil; whereas evil cannot exist without good (q. 49, a. 3); so there is order in the demons, as possessing a good nature.

Reply to Objection 2. If we consider the ordering of the demons on the part of God Who orders them, it is sacred; for He uses the demons for Himself; but on the part of the demons’ will it is not a sacred thing, because they abuse their nature for evil.

Reply to Objection 3. The name “Seraphim” is given from the ardor of charity; and the name “Thrones” from the Divine indwelling; and the name “Dominations” imports a certain liberty; all of which are opposed to sin; and therefore these names are not given to the angels who sinned.

Whether among the demons there is precedence?

Ia q. 109 a. 2

Objection 1. It would seem that there is no precedence among the demons. For every precedence is according to some order of justice. But the demons are wholly fallen from justice. Therefore there is no precedence among them.

Objection 2. Further, there is no precedence where obedience and subjection do not exist. But these cannot be without concord; which is not to be found among the demons, according to the text, “Among the proud there are always contentions” (Prov. 13:10). Therefore there is no precedence among the demons.

Objection 3. If there be precedence among them it is either according to nature, or according to their sin

or punishment. But it is not according to their nature, for subjection and service do not come from nature but from subsequent sin; neither is it according to sin or punishment, because in that case the superior demons who have sinned the most grievously, would be subject to the inferior. Therefore there is no precedence among the demons.

On the contrary, On 1 Cor. 15:24 the gloss says: “While the world lasts, angels will preside over angels, men over men, and demons over demons.”

I answer that, Since action follows the nature of a thing, where natures are subordinate, actions also must be subordinate to each other. Thus it is in corporeal

things, for as the inferior bodies by natural order are below the heavenly bodies, their actions and movements are subject to the actions and movements of the heavenly bodies. Now it is plain from what we have said (a. 1), that the demons are by natural order subject to others; and hence their actions are subject to the action of those above them, and this is what we mean by precedence—that the action of the subject should be under the action of the prelate. So the very natural disposition of the demons requires that there should be authority among them. This agrees too with Divine wisdom, which leaves nothing inordinate, which “reacheth from end to end mightily, and ordereth all things sweetly” (Wis. 8:1).

Reply to Objection 1. The authority of the demons is not founded on their justice, but on the justice of God

ordering all things.

Reply to Objection 2. The concord of the demons, whereby some obey others, does not arise from mutual friendships, but from their common wickedness whereby they hate men, and fight against God’s justice. For it belongs to wicked men to be joined to and subject to those whom they see to be stronger, in order to carry out their own wickedness.

Reply to Objection 3. The demons are not equal in nature; and so among them there exists a natural precedence; which is not the case with men, who are naturally equal. That the inferior are subject to the superior, is not for the benefit of the superior, but rather to their detriment; because since to do evil belongs in a pre-eminent degree to unhappiness, it follows that to preside in evil is to be more unhappy.

Whether there is enlightenment in the demons?

Ia q. 109 a. 3

Objection 1. It would seem that enlightenment is in the demons. For enlightenment means the manifestation of the truth. But one demon can manifest truth to another, because the superior excel in natural knowledge. Therefore the superior demons can enlighten the inferior.

Objection 2. Further, a body abounding in light can enlighten a body deficient in light, as the sun enlightens the moon. But the superior demons abound in the participation of natural light. Therefore it seems that the superior demons can enlighten the inferior.

On the contrary, Enlightenment is not without cleansing and perfecting, as stated above (q. 106, a. 1). But to cleanse does not befit the demons, according to the words: “What can be made clean by the unclean?” (Ecclus. 34:4). Therefore neither can they enlighten.

I answer that, There can be no enlightenment properly speaking among the demons. For, as above explained (q. 107, a. 2), enlightenment properly speak-

ing is the manifestation of the truth in reference to God, Who enlightens every intellect. Another kind of manifestation of the truth is speech, as when one angel manifests his concept to another. Now the demon’s perversity does not lead one to order another to God, but rather to lead away from the Divine order; and so one demon does not enlighten another; but one can make known his mental concept to another by way of speech.

Reply to Objection 1. Not every kind of manifestation of the truth is enlightenment, but only that which is above described.

Reply to Objection 2. According to what belongs to natural knowledge, there is no necessary manifestation of the truth either in the angels, or in the demons, because, as above explained (q. 55, a. 2; q. 58, a. 2; q. 79, a. 2), they know from the first all that belongs to their natural knowledge. So the greater fulness of natural light in the superior demons does not prove that they can enlighten others.

Whether the good angels have precedence over the bad angels?

Ia q. 109 a. 4

Objection 1. It would seem that the good angels have no precedence over the bad angels. For the angels’ precedence is especially connected with enlightenment. But the bad angels, being darkness, are not enlightened by the good angels. Therefore the good angels do not rule over the bad.

Objection 2. Further, superiors are responsible as regards negligence for the evil deeds of their subjects. But the demons do much evil. Therefore if they are subject to the good angels, it seems that negligence is to be charged to the good angels; which cannot be admitted.

Objection 3. Further, the angels’ precedence follows upon the order of nature, as above explained (a. 2). But if the demons fell from every order, as is commonly said, many of the demons are superior to many good an-

gels in the natural order. Therefore the good angels have no precedence over all the bad angels.

On the contrary, Augustine says (De Trin. iii), that “the treacherous and sinful spirit of life is ruled by the rational, pious, and just spirit of life”; and Gregory says (Hom. xxxiv) that “the Powers are the angels to whose charge are subjected the hostile powers.”

I answer that, The whole order of precedence is first and originally in God; and it is shared by creatures accordingly as they are the nearer to God. For those creatures, which are more perfect and nearer to God, have the power to act on others. Now the greatest perfection and that which brings them nearest to God belongs to the creatures who enjoy God, as the holy angels; of which perfection the demons are deprived; and

therefore the good angels have precedence over the bad, and these are ruled by them.

Reply to Objection 1. Many things concerning Divine mysteries are made known by the holy angels to the bad angels, whenever the Divine justice requires the demons to do anything for the punishment of the evil; or for the trial of the good; as in human affairs the judge's assessors make known his sentence to the executioners. This revelation, if compared to the angelic revealers, can be called an enlightenment, forasmuch as they direct it to God; but it is not an enlightenment on the part of the demons, for these do not direct it to God; but to the fulfilment of their own wickedness.

Reply to Objection 2. The holy angels are the min-

isters of the Divine wisdom. Hence as the Divine wisdom permits some evil to be done by bad angels or men, for the sake of the good that follows; so also the good angels do not entirely restrain the bad from inflicting harm.

Reply to Objection 3. An angel who is inferior in the natural order presides over demons, although these may be naturally superior; because the power of Divine justice to which the good angels cleave, is stronger than the natural power of the angels. Hence likewise among men, "the spiritual man judgeth all things" (1 Cor. 2:15), and the Philosopher says (Ethic. iii, 4; x, 5) that "the virtuous man is the rule and measure of all human acts."

Objection 1. It would seem that there are no orders among the demons. For order belongs to good, as also mode, and species, as Augustine says (*De Nat. Boni* iii); and on the contrary, disorder belongs to evil. But there is nothing disorderly in the good angels. Therefore in the bad angels there are no orders.

Objection 2. Further, the angelic orders are contained under a hierarchy. But the demons are not in a hierarchy, which is defined as a holy principality; for they are void of all holiness. Therefore among the demons there are no orders.

Objection 3. Further, the demons fell from every one of the angelic orders; as is commonly supposed. Therefore, if some demons are said to belong to an order, as falling from that order, it would seem necessary to give them the names of each of those orders. But we never find that they are called “Seraphim,” or “Thrones,” or “Dominations.” Therefore on the same ground they are not to be placed in any other order.

On the contrary, The Apostle says (*Eph. 6:12*): “Our wrestling . . . is against principalities and powers, against the rulers of the world of this darkness.”

I answer that, As explained above (q. 108, Aa. 4,7,8), order in the angels is considered both according to the grade of nature; and according to that of grace. Now grace has a twofold state, the imperfect, which is that of merit; and the perfect, which is that of

consummate glory.

If therefore we consider the angelic orders in the light of the perfection of glory, then the demons are not in the angelic orders, and never were. But if we consider them in relation to imperfect grace, in that view the demons were at the time in the orders of angels, but fell away from them, according to what was said above (q. 62, a. 3), that all the angels were created in grace. But if we consider them in the light of nature, in that view they are still in those orders; because they have not lost their natural gifts; as Dionysius says (*Div. Nom.* iv).

Reply to Objection 1. Good can exist without evil; whereas evil cannot exist without good (q. 49, a. 3); so there is order in the demons, as possessing a good nature.

Reply to Objection 2. If we consider the ordering of the demons on the part of God Who orders them, it is sacred; for He uses the demons for Himself; but on the part of the demons’ will it is not a sacred thing, because they abuse their nature for evil.

Reply to Objection 3. The name “Seraphim” is given from the ardor of charity; and the name “Thrones” from the Divine indwelling; and the name “Dominations” imports a certain liberty; all of which are opposed to sin; and therefore these names are not given to the angels who sinned.

Objection 1. It would seem that there is no precedence among the demons. For every precedence is according to some order of justice. But the demons are wholly fallen from justice. Therefore there is no precedence among them.

Objection 2. Further, there is no precedence where obedience and subjection do not exist. But these cannot be without concord; which is not to be found among the demons, according to the text, "Among the proud there are always contentions" (Prov. 13:10). Therefore there is no precedence among the demons.

Objection 3. If there be precedence among them it is either according to nature, or according to their sin or punishment. But it is not according to their nature, for subjection and service do not come from nature but from subsequent sin; neither is it according to sin or punishment, because in that case the superior demons who have sinned the most grievously, would be subject to the inferior. Therefore there is no precedence among the demons.

On the contrary, On 1 Cor. 15:24 the gloss says: "While the world lasts, angels will preside over angels, men over men, and demons over demons."

I answer that, Since action follows the nature of a thing, where natures are subordinate, actions also must be subordinate to each other. Thus it is in corporeal things, for as the inferior bodies by natural order are below the heavenly bodies, their actions and movements are subject to the actions and movements of the heav-

enly bodies. Now it is plain from what we have said (a. 1), that the demons are by natural order subject to others; and hence their actions are subject to the action of those above them, and this is what we mean by precedence—that the action of the subject should be under the action of the prelate. So the very natural disposition of the demons requires that there should be authority among them. This agrees too with Divine wisdom, which leaves nothing inordinate, which "reacheth from end to end mightily, and ordereth all things sweetly" (Wis. 8:1).

Reply to Objection 1. The authority of the demons is not founded on their justice, but on the justice of God ordering all things.

Reply to Objection 2. The concord of the demons, whereby some obey others, does not arise from mutual friendships, but from their common wickedness whereby they hate men, and fight against God's justice. For it belongs to wicked men to be joined to and subject to those whom they see to be stronger, in order to carry out their own wickedness.

Reply to Objection 3. The demons are not equal in nature; and so among them there exists a natural precedence; which is not the case with men, who are naturally equal. That the inferior are subject to the superior, is not for the benefit of the superior, but rather to their detriment; because since to do evil belongs in a pre-eminent degree to unhappiness, it follows that to preside in evil is to be more unhappy.

Objection 1. It would seem that enlightenment is in the demons. For enlightenment means the manifestation of the truth. But one demon can manifest truth to another, because the superior excel in natural knowledge. Therefore the superior demons can enlighten the inferior.

Objection 2. Further, a body abounding in light can enlighten a body deficient in light, as the sun enlightens the moon. But the superior demons abound in the participation of natural light. Therefore it seems that the superior demons can enlighten the inferior.

On the contrary, Enlightenment is not without cleansing and perfecting, as stated above (q. 106, a. 1). But to cleanse does not befit the demons, according to the words: "What can be made clean by the unclean?" (Ecclus. 34:4). Therefore neither can they enlighten.

I answer that, There can be no enlightenment properly speaking among the demons. For, as above explained (q. 107, a. 2), enlightenment properly speak-

ing is the manifestation of the truth in reference to God, Who enlightens every intellect. Another kind of manifestation of the truth is speech, as when one angel manifests his concept to another. Now the demon's perversity does not lead one to order another to God, but rather to lead away from the Divine order; and so one demon does not enlighten another; but one can make known his mental concept to another by way of speech.

Reply to Objection 1. Not every kind of manifestation of the truth is enlightenment, but only that which is above described.

Reply to Objection 2. According to what belongs to natural knowledge, there is no necessary manifestation of the truth either in the angels, or in the demons, because, as above explained (q. 55, a. 2; q. 58, a. 2; q. 79, a. 2), they know from the first all that belongs to their natural knowledge. So the greater fulness of natural light in the superior demons does not prove that they can enlighten others.

Objection 1. It would seem that the good angels have no precedence over the bad angels. For the angels' precedence is especially connected with enlightenment. But the bad angels, being darkness, are not enlightened by the good angels. Therefore the good angels do not rule over the bad.

Objection 2. Further, superiors are responsible as regards negligence for the evil deeds of their subjects. But the demons do much evil. Therefore if they are subject to the good angels, it seems that negligence is to be charged to the good angels; which cannot be admitted.

Objection 3. Further, the angels' precedence follows upon the order of nature, as above explained (a. 2). But if the demons fell from every order, as is commonly said, many of the demons are superior to many good angels in the natural order. Therefore the good angels have no precedence over all the bad angels.

On the contrary, Augustine says (De Trin. iii), that "the treacherous and sinful spirit of life is ruled by the rational, pious, and just spirit of life"; and Gregory says (Hom. xxxiv) that "the Powers are the angels to whose charge are subjected the hostile powers."

I answer that, The whole order of precedence is first and originally in God; and it is shared by creatures accordingly as they are the nearer to God. For those creatures, which are more perfect and nearer to God, have the power to act on others. Now the greatest perfection and that which brings them nearest to God belongs to the creatures who enjoy God, as the holy an-

gels; of which perfection the demons are deprived; and therefore the good angels have precedence over the bad, and these are ruled by them.

Reply to Objection 1. Many things concerning Divine mysteries are made known by the holy angels to the bad angels, whenever the Divine justice requires the demons to do anything for the punishment of the evil; or for the trial of the good; as in human affairs the judge's assessors make known his sentence to the executioners. This revelation, if compared to the angelic revealers, can be called an enlightenment, forasmuch as they direct it to God; but it is not an enlightenment on the part of the demons, for these do not direct it to God; but to the fulfilment of their own wickedness.

Reply to Objection 2. The holy angels are the ministers of the Divine wisdom. Hence as the Divine wisdom permits some evil to be done by bad angels or men, for the sake of the good that follows; so also the good angels do not entirely restrain the bad from inflicting harm.

Reply to Objection 3. An angel who is inferior in the natural order presides over demons, although these may be naturally superior; because the power of Divine justice to which the good angels cleave, is stronger than the natural power of the angels. Hence likewise among men, "the spiritual man judgeth all things" (1 Cor. 2:15), and the Philosopher says (Ethic. iii, 4; x, 5) that "the virtuous man is the rule and measure of all human acts."

FIRST PART, QUESTION 110

How Angels Act On Bodies (In Four Articles)

We now consider how the angels preside over the corporeal creatures. Under this head there are four points of inquiry:

- (1) Whether the corporeal creature is governed by the angels?
- (2) Whether the corporeal creature obeys the mere will of the angels?
- (3) Whether the angels by their own power can immediately move bodies locally?
- (4) Whether the good or bad angels can work miracles?

Whether the corporeal creature is governed by the angels?

Ia q. 110 a. 1

Objection 1. It would seem that the corporeal creature is not governed by angels. For whatever possesses a determinate mode of action, needs not to be governed by any superior power; for we require to be governed lest we do what we ought not. But corporeal things have their actions determined by the nature divinely bestowed upon them. Therefore they do not need the government of angels.

Objection 2. Further, the lowest things are ruled by the superior. But some corporeal things are inferior, and others are superior. Therefore they need not be governed by the angels.

Objection 3. Further, the different orders of the angels are distinguished by different offices. But if corporeal creatures were ruled by the angels, there would be as many angelic offices as there are species of things. So also there would be as many orders of angels as there are species of things; which is against what is laid down above (q. 108, a. 2). Therefore the corporeal creature is not governed by angels.

On the contrary, Augustine says (De Trin. iii, 4) that “all bodies are ruled by the rational spirit of life”; and Gregory says (Dial. iv, 6), that “in this visible world nothing takes place without the agency of the invisible creature.”

I answer that, It is generally found both in human affairs and in natural things that every particular power is governed and ruled by the universal power; as, for example, the bailiff’s power is governed by the power of the king. Among the angels also, as explained above (q. 55, a. 3 ; q. 108, a. 1), the superior angels who preside over the inferior possess a more universal knowledge. Now it is manifest that the power of any individual body is more particular than the power of any spiritual substance; for every corporeal form is a form individualized by matter, and determined to the “here and now”; whereas immaterial forms are absolute and intelligible. Therefore, as the inferior angels who have the less universal forms, are ruled by the superior; so are all corporeal things ruled by the angels. This is not only laid down by the holy doctors, but also by all philosophers who admit the existence of incorporeal substances.

Reply to Objection 1. Corporeal things have determinate actions; but they exercise such actions only according as they are moved; because it belongs to a body not to act unless moved. Hence a corporeal creature must be moved by a spiritual creature.

Reply to Objection 2. The reason alleged is according to the opinion of Aristotle who laid down (Metaph. xi, 8) that the heavenly bodies are moved by spiritual substances; the number of which he endeavored to assign according to the number of motions apparent in the heavenly bodies. But he did not say that there were any spiritual substances with immediate rule over the inferior bodies, except perhaps human souls; and this was because he did not consider that any operations were exercised in the inferior bodies except the natural ones for which the movement of the heavenly bodies sufficed. But because we assert that many things are done in the inferior bodies besides the natural corporeal actions, for which the movements of the heavenly bodies are not sufficient; therefore in our opinion we must assert that the angels possess an immediate presidency not only over the heavenly bodies, but also over the inferior bodies.

Reply to Objection 3. Philosophers have held different opinions about immaterial substances. For Plato laid down that immaterial substances were types and species of sensible bodies; and that some were more universal than others; and so he held that immaterial substances preside immediately over all sensible bodies, and different ones over different bodies. But Aristotle held that immaterial substances are not the species of sensible bodies, but something higher and more universal; and so he did not attribute to them any immediate presiding over single bodies, but only over the universal agents, the heavenly bodies. Avicenna followed a middle course. For he agreed with Plato in supposing some spiritual substance to preside immediately in the sphere of active and passive elements; because, as Plato also said, he held that the forms of these sensible things are derived from immaterial substances. But he differed from Plato because he supposed only one immaterial substance to preside over all inferior bodies, which he called the “active intelligence.”

The holy doctors held with the Platonists that different spiritual substances were placed over corporeal things. For Augustine says (QQ. 83, qu. 79): “Every visible thing in this world has an angelic power placed over it”; and Damascene says (De Fide Orth. ii, 4): “The devil was one of the angelic powers who presided over the terrestrial order”; and Origen says on the text, “When the ass saw the angel” (Num. 22:23), that “the world has need of angels who preside over beasts, and over the birth of animals, and trees, and plants, and over the increase of all other things” (Hom. xiv in Num.). The reason of this, however, is not that an angel is more fitted by his nature to preside over animals than over

plants; because each angel, even the least, has a higher and more universal power than any kind of corporeal things: the reason is to be sought in the order of Divine wisdom, Who places different rulers over different things. Nor does it follow that there are more than nine orders of angels, because, as above expounded (q. 108, a. 2), the orders are distinguished by their general offices. Hence as according to Gregory all the angels whose proper office it is to preside over the demons are of the order of the “powers”; so to the order of the “virtues” do those angels seem to belong who preside over purely corporeal creatures; for by their ministrations miracles are sometimes performed.

Whether corporeal matter obeys the mere will of an angel?

Ia q. 110 a. 2

Objection 1. It would seem that corporeal matter obeys the mere will of an angel. For the power of an angel excels the power of the soul. But corporeal matter obeys a conception of the soul; for the body of man is changed by a conception of the soul as regards heat and cold, and sometimes even as regards health and sickness. Therefore much more is corporeal matter changed by a conception of an angel.

Objection 2. Further, whatever can be done by an inferior power, can be done by a superior power. Now the power of an angel is superior to corporeal power. But a body by its power is able to transform corporeal matter; as appears when fire begets fire. Therefore much more efficaciously can an angel by his power transform corporeal matter.

Objection 3. Further, all corporeal nature is under angelic administration, as appears above (a. 1), and thus it appears that bodies are as instruments to the angels, for an instrument is essentially a mover moved. Now in effects there is something that is due to the power of their principal agents, and which cannot be due to the power of the instrument; and this it is that takes the principal place in the effect. For example, digestion is due to the force of natural heat, which is the instrument of the nutritive soul: but that living flesh is thus generated is due to the power of the soul. Again the cutting of the wood is from the saw; but that it assumes the length the form of a bed is from the design of the [joiner’s] art. Therefore the substantial form which takes the principal place in the corporeal effects, is due to the angelic power. Therefore matter obeys the angels in receiving its form.

On the contrary, Augustine says “It is not to be thought, that this visible matter obeys these rebel angels; for it obeys God alone.”

I answer that, The Platonists* asserted that the forms which are in matter are caused by immaterial forms, because they said that the material forms are participations of immaterial forms. Avicenna followed them in this opinion to some extent, for he said that all

forms which are in matter proceed from the concept of the “intellect”; and that corporeal agents only dispose [matter] for the forms. They seem to have been deceived on this point, through supposing a form to be something made “per se,” so that it would be the effect of a formal principle. But, as the Philosopher proves (Metaph. vii, Did. vi, 8), what is made, properly speaking, is the “composite”: for this properly speaking, is, as it were, what subsists. Whereas the form is called a being, not as that which is, but as that by which something is; and consequently neither is a form, properly speaking, made; for that is made which is; since to be is nothing but the way to existence.

Now it is manifest that what is made is like to the maker, forasmuch as every agent makes its like. So whatever makes natural things, has a likeness to the composite; either because it is composite itself, as when fire begets fire, or because the whole “composite” as to both matter and form is within its power; and this belongs to God alone. Therefore every informing of matter is either immediately from God, or from some corporeal agent; but not immediately from an angel.

Reply to Objection 1. Our soul is united to the body as the form; and so it is not surprising for the body to be formally changed by the soul’s concept; especially as the movement of the sensitive appetite, which is accompanied with a certain bodily change, is subject to the command of reason. An angel, however, has not the same connection with natural bodies; and hence the argument does not hold.

Reply to Objection 2. Whatever an inferior power can do, that a superior power can do, not in the same way, but in a more excellent way; for example, the intellect knows sensible things in a more excellent way than sense knows them. So an angel can change corporeal matter in a more excellent way than can corporeal agents, that is by moving the corporeal agents themselves, as being the superior cause.

Reply to Objection 3. There is nothing to prevent some natural effect taking place by angelic power, for

* Phaedo. xlix: Tim. (Did.) vol. ii, p. 218

which the power of corporeal agents would not suffice. This, however, is not to obey an angel's will (as neither does matter obey the mere will of a cook, when by regulating the fire according to the prescription of his art

he produces a dish that the fire could not have produced by itself); since to reduce matter to the act of the substantial form does not exceed the power of a corporeal agent; for it is natural for like to make like.

Whether bodies obey the angels as regards local motion?

Ia q. 110 a. 3

Objection 1. It would seem that bodies do not obey the angels in local motion. For the local motion of natural bodies follows on their forms. But the angels do not cause the forms of natural bodies, as stated above (a. 2). Therefore neither can they cause in them local motion.

Objection 2. Further, the Philosopher (Phys. viii, 7) proves that local motion is the first of all movements. But the angels cannot cause other movements by a formal change of the matter. Therefore neither can they cause local motion.

Objection 3. Further, the corporeal members obey the concept of the soul as regards local movement, as having in themselves some principle of life. In natural bodies, however, there is not vital principle. Therefore they do not obey the angels in local motion.

On the contrary, Augustine says (De Trin. iii, 8,9) that the angels use corporeal seed to produce certain effects. But they cannot do this without causing local movement. Therefore bodies obey them in local motion.

I answer that, As Dionysius says (Div. Nom. vii): "Divine wisdom has joined the ends of the first to the principles of the second." Hence it is clear that the inferior nature at its highest point is in conjunction with superior nature. Now corporeal nature is below the spiritual nature. But among all corporeal movements the most perfect is local motion, as the Philosopher proves

(Phys. viii, 7). The reason of this is that what is moved locally is not as such in potentiality to anything intrinsic, but only to something extrinsic—that is, to place. Therefore the corporeal nature has a natural aptitude to be moved immediately by the spiritual nature as regards place. Hence also the philosophers asserted that the supreme bodies are moved locally by the spiritual substances; whence we see that the soul moves the body first and chiefly by a local motion.

Reply to Objection 1. There are in bodies other local movements besides those which result from the forms; for instance, the ebb and flow of the sea does not follow from the substantial form of the water, but from the influence of the moon; and much more can local movements result from the power of spiritual substances.

Reply to Objection 2. The angels, by causing local motion, as the first motion, can thereby cause other movements; that is, by employing corporeal agents to produce these effects, as a workman employs fire to soften iron.

Reply to Objection 3. The power of an angel is not so limited as is the power of the soul. Hence the motive power of the soul is limited to the body united to it, which is vivified by it, and by which it can move other things. But an angel's power is not limited to any body; hence it can move locally bodies not joined to it.

Whether angels can work miracles?

Ia q. 110 a. 4

Objection 1. It would seem that the angels can work miracles. For Gregory says (Hom. xxxiv in Evang.): "Those spirits are called virtues by whom signs and miracles are usually done."

Objection 2. Further, Augustine says (QQ. 83, qu. 79) that "magicians work miracles by private contracts; good Christians by public justice, bad Christians by the signs of public justice." But magicians work miracles because they are "heard by the demons," as he says elsewhere in the same work*. Therefore the demons can work miracles. Therefore much more can the good angels.

Objection 3. Further, Augustine says in the same work[†] that "it is not absurd to believe that all the things we see happen may be brought about by the lower powers that dwell in our atmosphere." But when an effect of natural causes is produced outside the order of the nat-

ural cause, we call it a miracle, as, for instance, when anyone is cured of a fever without the operation of nature. Therefore the angels and demons can work miracles.

Objection 4. Further, superior power is not subject to the order of an inferior cause. But corporeal nature is inferior to an angel. Therefore an angel can work outside the order of corporeal agents; which is to work miracles.

On the contrary, It is written of God (Ps. 135:4): "Who alone doth great wonders."

I answer that, A miracle properly so called is when something is done outside the order of nature. But it is not enough for a miracle if something is done outside the order of any particular nature; for otherwise anyone would perform a miracle by throwing a stone upwards, as such a thing is outside the order of the stone's nature.

* Cf. Liber xxi, Sentent., sent. 4: among the supposititious works of St. Augustine † Cf. Liber xxi, Sentent., sent. 4: among the supposititious works of St. Augustine

So for a miracle is required that it be against the order of the whole created nature. But God alone can do this, because, whatever an angel or any other creature does by its own power, is according to the order of created nature; and thus it is not a miracle. Hence God alone can work miracles.

Reply to Objection 1. Some angels are said to work miracles; either because God works miracles at their request, in the same way as holy men are said to work miracles; or because they exercise a kind of ministry in the miracles which take place; as in collecting the dust in the general resurrection, or by doing something of that kind.

Reply to Objection 2. Properly speaking, as said above, miracles are those things which are done outside the order of the whole created nature. But as we do not know all the power of created nature, it follows that when anything is done outside the order of created nature by a power unknown to us, it is called a miracle as regards ourselves. So when the demons do anything of their own natural power, these things are called “miracles” not in an absolute sense, but in reference to our-

selves. In this way the magicians work miracles through the demons; and these are said to be done by “private contracts,” forasmuch as every power of the creature, in the universe, may be compared to the power of a private person in a city. Hence when a magician does anything by compact with the devil, this is done as it were by private contract. On the other hand, the Divine justice is in the whole universe as the public law is in the city. Therefore good Christians, so far as they work miracles by Divine justice, are said to work miracles by “public justice”: but bad Christians by the “signs of public justice,” as by invoking the name of Christ, or by making use of other sacred signs.

Reply to Objection 3. Spiritual powers are able to effect whatever happens in this visible world, by employing corporeal seeds by local movement.

Reply to Objection 4. Although the angels can do something which is outside the order of corporeal nature, yet they cannot do anything outside the whole created order, which is essential to a miracle, as above explained.

Objection 1. It would seem that the corporeal creature is not governed by angels. For whatever possesses a determinate mode of action, needs not to be governed by any superior power; for we require to be governed lest we do what we ought not. But corporeal things have their actions determined by the nature divinely bestowed upon them. Therefore they do not need the government of angels.

Objection 2. Further, the lowest things are ruled by the superior. But some corporeal things are inferior, and others are superior. Therefore they need not be governed by the angels.

Objection 3. Further, the different orders of the angels are distinguished by different offices. But if corporeal creatures were ruled by the angels, there would be as many angelic offices as there are species of things. So also there would be as many orders of angels as there are species of things; which is against what is laid down above (q. 108, a. 2). Therefore the corporeal creature is not governed by angels.

On the contrary, Augustine says (De Trin. iii, 4) that “all bodies are ruled by the rational spirit of life”; and Gregory says (Dial. iv, 6), that “in this visible world nothing takes place without the agency of the invisible creature.”

I answer that, It is generally found both in human affairs and in natural things that every particular power is governed and ruled by the universal power; as, for example, the bailiff’s power is governed by the power of the king. Among the angels also, as explained above (q. 55, a. 3 ; q. 108, a. 1), the superior angels who preside over the inferior possess a more universal knowledge. Now it is manifest that the power of any individual body is more particular than the power of any spiritual substance; for every corporeal form is a form individualized by matter, and determined to the “here and now”; whereas immaterial forms are absolute and intelligible. Therefore, as the inferior angels who have the less universal forms, are ruled by the superior; so are all corporeal things ruled by the angels. This is not only laid down by the holy doctors, but also by all philosophers who admit the existence of incorporeal substances.

Reply to Objection 1. Corporeal things have determinate actions; but they exercise such actions only according as they are moved; because it belongs to a body not to act unless moved. Hence a corporeal creature must be moved by a spiritual creature.

Reply to Objection 2. The reason alleged is according to the opinion of Aristotle who laid down (Metaph. xi, 8) that the heavenly bodies are moved by spiritual substances; the number of which he endeavored to assign according to the number of motions apparent in the heavenly bodies. But he did not say that there were any spiritual substances with immediate rule over the inferior bodies, except perhaps human souls; and this was

because he did not consider that any operations were exercised in the inferior bodies except the natural ones for which the movement of the heavenly bodies sufficed. But because we assert that many things are done in the inferior bodies besides the natural corporeal actions, for which the movements of the heavenly bodies are not sufficient; therefore in our opinion we must assert that the angels possess an immediate presidency not only over the heavenly bodies, but also over the inferior bodies.

Reply to Objection 3. Philosophers have held different opinions about immaterial substances. For Plato laid down that immaterial substances were types and species of sensible bodies; and that some were more universal than others; and so he held that immaterial substances preside immediately over all sensible bodies, and different ones over different bodies. But Aristotle held that immaterial substances are not the species of sensible bodies, but something higher and more universal; and so he did not attribute to them any immediate presiding over single bodies, but only over the universal agents, the heavenly bodies. Avicenna followed a middle course. For he agreed with Plato in supposing some spiritual substance to preside immediately in the sphere of active and passive elements; because, as Plato also said, he held that the forms of these sensible things are derived from immaterial substances. But he differed from Plato because he supposed only one immaterial substance to preside over all inferior bodies, which he called the “active intelligence.”

The holy doctors held with the Platonists that different spiritual substances were placed over corporeal things. For Augustine says (QQ. 83, qu. 79): “Every visible thing in this world has an angelic power placed over it”; and Damascene says (De Fide Orth. ii, 4): “The devil was one of the angelic powers who presided over the terrestrial order”; and Origen says on the text, “When the ass saw the angel” (Num. 22:23), that “the world has need of angels who preside over beasts, and over the birth of animals, and trees, and plants, and over the increase of all other things” (Hom. xiv in Num.). The reason of this, however, is not that an angel is more fitted by his nature to preside over animals than over plants; because each angel, even the least, has a higher and more universal power than any kind of corporeal things: the reason is to be sought in the order of Divine wisdom, Who places different rulers over different things. Nor does it follow that there are more than nine orders of angels, because, as above expounded (q. 108, a. 2), the orders are distinguished by their general offices. Hence as according to Gregory all the angels whose proper office it is to preside over the demons are of the order of the “powers”; so to the order of the “virtues” do those angels seem to belong who preside over purely corporeal creatures; for by their ministration miracles are sometimes performed.

Objection 1. It would seem that corporeal matter obeys the mere will of an angel. For the power of an angel excels the power of the soul. But corporeal matter obeys a conception of the soul; for the body of man is changed by a conception of the soul as regards heat and cold, and sometimes even as regards health and sickness. Therefore much more is corporeal matter changed by a conception of an angel.

Objection 2. Further, whatever can be done by an inferior power, can be done by a superior power. Now the power of an angel is superior to corporeal power. But a body by its power is able to transform corporeal matter; as appears when fire begets fire. Therefore much more efficaciously can an angel by his power transform corporeal matter.

Objection 3. Further, all corporeal nature is under angelic administration, as appears above (a. 1), and thus it appears that bodies are as instruments to the angels, for an instrument is essentially a mover moved. Now in effects there is something that is due to the power of their principal agents, and which cannot be due to the power of the instrument; and this it is that takes the principal place in the effect. For example, digestion is due to the force of natural heat, which is the instrument of the nutritive soul: but that living flesh is thus generated is due to the power of the soul. Again the cutting of the wood is from the saw; but that it assumes the length the form of a bed is from the design of the [joiner's] art. Therefore the substantial form which takes the principal place in the corporeal effects, is due to the angelic power. Therefore matter obeys the angels in receiving its form.

On the contrary, Augustine says "It is not to be thought, that this visible matter obeys these rebel angels; for it obeys God alone."

I answer that, The Platonists* asserted that the forms which are in matter are caused by immaterial forms, because they said that the material forms are participations of immaterial forms. Avicenna followed them in this opinion to some extent, for he said that all forms which are in matter proceed from the concept of the "intellect"; and that corporeal agents only dispose [matter] for the forms. They seem to have been deceived on this point, through supposing a form to be

something made "per se," so that it would be the effect of a formal principle. But, as the Philosopher proves (Metaph. vii, Did. vi, 8), what is made, properly speaking, is the "composite": for this properly speaking, is, as it were, what subsists. Whereas the form is called a being, not as that which is, but as that by which something is; and consequently neither is a form, properly speaking, made; for that is made which is; since to be is nothing but the way to existence.

Now it is manifest that what is made is like to the maker, forasmuch as every agent makes its like. So whatever makes natural things, has a likeness to the composite; either because it is composite itself, as when fire begets fire, or because the whole "composite" as to both matter and form is within its power; and this belongs to God alone. Therefore every informing of matter is either immediately from God, or from some corporeal agent; but not immediately from an angel.

Reply to Objection 1. Our soul is united to the body as the form; and so it is not surprising for the body to be formally changed by the soul's concept; especially as the movement of the sensitive appetite, which is accompanied with a certain bodily change, is subject to the command of reason. An angel, however, has not the same connection with natural bodies; and hence the argument does not hold.

Reply to Objection 2. Whatever an inferior power can do, that a superior power can do, not in the same way, but in a more excellent way; for example, the intellect knows sensible things in a more excellent way than sense knows them. So an angel can change corporeal matter in a more excellent way than can corporeal agents, that is by moving the corporeal agents themselves, as being the superior cause.

Reply to Objection 3. There is nothing to prevent some natural effect taking place by angelic power, for which the power of corporeal agents would not suffice. This, however, is not to obey an angel's will (as neither does matter obey the mere will of a cook, when by regulating the fire according to the prescription of his art he produces a dish that the fire could not have produced by itself); since to reduce matter to the act of the substantial form does not exceed the power of a corporeal agent; for it is natural for like to make like.

* Phaedo. xlix: Tim. (Did.) vol. ii, p. 218

Objection 1. It would seem that bodies do not obey the angels in local motion. For the local motion of natural bodies follows on their forms. But the angels do not cause the forms of natural bodies, as stated above (a. 2). Therefore neither can they cause in them local motion.

Objection 2. Further, the Philosopher (Phys. viii, 7) proves that local motion is the first of all movements. But the angels cannot cause other movements by a formal change of the matter. Therefore neither can they cause local motion.

Objection 3. Further, the corporeal members obey the concept of the soul as regards local movement, as having in themselves some principle of life. In natural bodies, however, there is not vital principle. Therefore they do not obey the angels in local motion.

On the contrary, Augustine says (De Trin. iii, 8,9) that the angels use corporeal seed to produce certain effects. But they cannot do this without causing local movement. Therefore bodies obey them in local motion.

I answer that, As Dionysius says (Div. Nom. vii): “Divine wisdom has joined the ends of the first to the principles of the second.” Hence it is clear that the inferior nature at its highest point is in conjunction with superior nature. Now corporeal nature is below the spiritual nature. But among all corporeal movements the most perfect is local motion, as the Philosopher proves

(Phys. viii, 7). The reason of this is that what is moved locally is not as such in potentiality to anything intrinsic, but only to something extrinsic—that is, to place. Therefore the corporeal nature has a natural aptitude to be moved immediately by the spiritual nature as regards place. Hence also the philosophers asserted that the supreme bodies are moved locally by the spiritual substances; whence we see that the soul moves the body first and chiefly by a local motion.

Reply to Objection 1. There are in bodies other local movements besides those which result from the forms; for instance, the ebb and flow of the sea does not follow from the substantial form of the water, but from the influence of the moon; and much more can local movements result from the power of spiritual substances.

Reply to Objection 2. The angels, by causing local motion, as the first motion, can thereby cause other movements; that is, by employing corporeal agents to produce these effects, as a workman employs fire to soften iron.

Reply to Objection 3. The power of an angel is not so limited as is the power of the soul. Hence the motive power of the soul is limited to the body united to it, which is vivified by it, and by which it can move other things. But an angel’s power is not limited to any body; hence it can move locally bodies not joined to it.

Objection 1. It would seem that the angels can work miracles. For Gregory says (Hom. xxxiv in Evang.): “Those spirits are called virtues by whom signs and miracles are usually done.”

Objection 2. Further, Augustine says (QQ. 83, qu. 79) that “magicians work miracles by private contracts; good Christians by public justice, bad Christians by the signs of public justice.” But magicians work miracles because they are “heard by the demons,” as he says elsewhere in the same work*. Therefore the demons can work miracles. Therefore much more can the good angels.

Objection 3. Further, Augustine says in the same work† that “it is not absurd to believe that all the things we see happen may be brought about by the lower powers that dwell in our atmosphere.” But when an effect of natural causes is produced outside the order of the natural cause, we call it a miracle, as, for instance, when anyone is cured of a fever without the operation of nature. Therefore the angels and demons can work miracles.

Objection 4. Further, superior power is not subject to the order of an inferior cause. But corporeal nature is inferior to an angel. Therefore an angel can work outside the order of corporeal agents; which is to work miracles.

On the contrary, It is written of God (Ps. 135:4): “Who alone doth great wonders.”

I answer that, A miracle properly so called is when something is done outside the order of nature. But it is not enough for a miracle if something is done outside the order of any particular nature; for otherwise anyone would perform a miracle by throwing a stone upwards, as such a thing is outside the order of the stone’s nature. So for a miracle is required that it be against the order of the whole created nature. But God alone can do this, because, whatever an angel or any other creature does by its own power, is according to the order of created nature; and thus it is not a miracle. Hence God alone

can work miracles.

Reply to Objection 1. Some angels are said to work miracles; either because God works miracles at their request, in the same way as holy men are said to work miracles; or because they exercise a kind of ministry in the miracles which take place; as in collecting the dust in the general resurrection, or by doing something of that kind.

Reply to Objection 2. Properly speaking, as said above, miracles are those things which are done outside the order of the whole created nature. But as we do not know all the power of created nature, it follows that when anything is done outside the order of created nature by a power unknown to us, it is called a miracle as regards ourselves. So when the demons do anything of their own natural power, these things are called “miracles” not in an absolute sense, but in reference to ourselves. In this way the magicians work miracles through the demons; and these are said to be done by “private contracts,” forasmuch as every power of the creature, in the universe, may be compared to the power of a private person in a city. Hence when a magician does anything by compact with the devil, this is done as it were by private contract. On the other hand, the Divine justice is in the whole universe as the public law is in the city. Therefore good Christians, so far as they work miracles by Divine justice, are said to work miracles by “public justice”: but bad Christians by the “signs of public justice,” as by invoking the name of Christ, or by making use of other sacred signs.

Reply to Objection 3. Spiritual powers are able to effect whatever happens in this visible world, by employing corporeal seeds by local movement.

Reply to Objection 4. Although the angels can do something which is outside the order of corporeal nature, yet they cannot do anything outside the whole created order, which is essential to a miracle, as above explained.

FIRST PART, QUESTION 111

The Action of the Angels On Man (In Four Articles)

We now consider the action of the angels on man, and inquire: (1) How far they can change them by their own natural power; (2) How they are sent by God to the ministry of men; (3) How they guard and protect men.

Under the first head there are four points of inquiry:

- (1) Whether an angel can enlighten the human intellect?
- (2) Whether he can change man's will?
- (3) Whether he can change man's imagination?
- (4) Whether he can change man's senses?

Whether an angel can enlighten man?

Ia q. 111 a. 1

Objection 1. It would seem that an angel cannot enlighten man. For man is enlightened by faith; hence Dionysius (Eccl. Hier. iii) attributes enlightenment to baptism, as "the sacrament of faith." But faith is immediately from God, according to Eph. 2:8: "By grace you are saved through faith, and that not of yourselves, for it is the gift of God." Therefore man is not enlightened by an angel; but immediately by God.

Objection 2. Further, on the words, "God hath manifested it to them" (Rom. 1:19), the gloss observes that "not only natural reason availed for the manifestation of Divine truths to men, but God also revealed them by His work," that is, by His creature. But both are immediately from God—that is, natural reason and the creature. Therefore God enlightens man immediately.

Objection 3. Further, whoever is enlightened is conscious of being enlightened. But man is not conscious of being enlightened by angels. Therefore he is not enlightened by them.

On the contrary, Dionysius says (Coel. Hier. iv) that the revelation of Divine things reaches men through the ministry of the angels. But such revelation is an enlightenment as we have stated (q. 106, a. 1; q. 107, a. 2). Therefore men are enlightened by the angels.

I answer that, Since the order of Divine Providence disposes that lower things be subject to the actions of higher, as explained above (q. 109, a. 2); as the inferior angels are enlightened by the superior, so men, who are inferior to the angels, are enlightened by them.

The modes of each of these kinds of enlightenment are in one way alike and in another way unlike. For, as was shown above (q. 106, a. 1), the enlightenment which consists in making known Divine truth has two functions; namely, according as the inferior intellect is strengthened by the action of the superior intellect, and according as the intelligible species which are in the superior intellect are proposed to the inferior so as to be grasped thereby. This takes place in the angels when the superior angel divides his universal concept of the truth according to the capacity of the inferior angel, as explained above (q. 106, a. 1).

The human intellect, however, cannot grasp the uni-

versal truth itself unveiled; because its nature requires it to understand by turning to the phantasms, as above explained (q. 84, a. 7). So the angels propose the intelligible truth to men under the similitudes of sensible things, according to what Dionysius says (Coel. Hier. i), that, "It is impossible for the divine ray to shine on us, otherwise than shrouded by the variety of the sacred veils." On the other hand, the human intellect as the inferior, is strengthened by the action of the angelic intellect. And in these two ways man is enlightened by an angel.

Reply to Objection 1. Two dispositions concur in the virtue of faith; first, the habit of the intellect whereby it is disposed to obey the will tending to Divine truth. For the intellect assents to the truth of faith, not as convinced by the reason, but as commanded by the will; hence Augustine says, "No one believes except willingly." In this respect faith comes from God alone. Secondly, faith requires that what is to be believed be proposed to the believer; which is accomplished by man, according to Rom. 10:17, "Faith cometh by hearing"; principally, however, by the angels, by whom Divine things are revealed to men. Hence the angels have some part in the enlightenment of faith. Moreover, men are enlightened by the angels not only concerning what is to be believed; but also as regards what is to be done.

Reply to Objection 2. Natural reason, which is immediately from God, can be strengthened by an angel, as we have said above. Again, the more the human intellect is strengthened, so much higher an intelligible truth can be elicited from the species derived from creatures. Thus man is assisted by an angel so that he may obtain from creatures a more perfect knowledge of God.

Reply to Objection 3. Intellectual operation and enlightenment can be understood in two ways. First, on the part of the object understood; thus whoever understands or is enlightened, knows that he understands or is enlightened, because he knows that the object is made known to him. Secondly, on the part of the principle; and thus it does not follow that whoever understands a truth, knows what the intellect is, which is the principle of the intellectual operation. In like manner not every-

one who is enlightened by an angel, knows that he is enlightened by him.

Whether the angels can change the will of man?

Ia q. 111 a. 2

Objection 1. It would seem that the angels can change the will of man. For, upon the text, “Who maketh His angels spirits and His ministers a flame of fire” (Heb. 1:7), the gloss notes that “they are fire, as being spiritually fervent, and as burning away our vices.” This could not be, however, unless they changed the will. Therefore the angels can change the will.

Objection 2. Further, Bede says (Super Matth. xv, 11), that, “the devil does not send wicked thoughts, but kindles them.” Damascene, however, says that he also sends them; for he remarks that “every malicious act and unclean passion is contrived by the demons and put into men” (De Fide Orth. ii, 4); in like manner also the good angels introduce and kindle good thoughts. But this could only be if they changed the will. Therefore the will is changed by them.

Objection 3. Further, the angel, as above explained, enlightens the human intellect by means of the phantasms. But as the imagination which serves the intellect can be changed by an angel, so can the sensitive appetite which serves the will, because it also is a faculty using a corporeal organ. Therefore as the angel enlightens the mind, so can he change the will.

On the contrary, To change the will belongs to God alone, according to Prov. 21:1: “The heart of the king is in the hand of the Lord, whithersoever He will He shall turn it.”

I answer that, The will can be changed in two ways. First, from within; in which way, since the movement of the will is nothing but the inclination of the will to the thing willed, God alone can thus change the will, because He gives the power of such an inclination to the intellectual nature. For as the natural inclination is from God alone Who gives the nature, so the inclination of the will is from God alone, Who causes the will.

Secondly, the will is moved from without. As re-

gards an angel, this can be only in one way—by the good apprehended by the intellect. Hence in as far as anyone may be the cause why anything be apprehended as an appetible good, so far does he move the will. In this way also God alone can move the will efficaciously; but an angel and man move the will by way of persuasion, as above explained (q. 106, a. 2).

In addition to this mode the human will can be moved from without in another way; namely, by the passion residing in the sensitive appetite: thus by concupiscence or anger the will is inclined to will something. In this manner the angels, as being able to rouse these passions, can move the will, not however by necessity, for the will ever remains free to consent to, or to resist, the passion.

Reply to Objection 1. Those who act as God’s ministers, either men or angels, are said to burn away vices, and to incite to virtue by way of persuasion.

Reply to Objection 2. The demon cannot put thoughts in our minds by causing them from within, since the act of the cogitative faculty is subject to the will; nevertheless the devil is called the kindler of thoughts, inasmuch as he incites to thought, by the desire of the things thought of, by way of persuasion, or by rousing the passions. Damascene calls this kindling “a putting in” because such a work is accomplished within. But good thoughts are attributed to a higher principle, namely, God, though they may be procured by the ministry of the angels.

Reply to Objection 3. The human intellect in its present state can understand only by turning to the phantasms; but the human will can will something following the judgment of reason rather than the passion of the sensitive appetite. Hence the comparison does not hold.

Whether an angel can change man’s imagination?

Ia q. 111 a. 3

Objection 1. It would seem that an angel cannot change man’s imagination. For the phantasy, as is said De Anima iii, is “a motion caused by the sense in act.” But if this motion were caused by an angel, it would not be caused by the sense in act. Therefore it is contrary to the nature of the phantasy, which is the act of the imaginative faculty, to be changed by an angel.

Objection 2. Further, since the forms in the imagination are spiritual, they are nobler than the forms existing in sensible matter. But an angel cannot impress forms upon sensible matter (q. 110, a. 2). Therefore he cannot impress forms on the imagination, and so he cannot change it.

Objection 3. Further, Augustine says (Gen. ad lit.

xii, 12): “One spirit by intermingling with another can communicate his knowledge to the other spirit by these images, so that the latter either understands it himself, or accepts it as understood by the other.” But it does not seem that an angel can be mingled with the human imagination, nor that the imagination can receive the knowledge of an angel. Therefore it seems that an angel cannot change the imagination.

Objection 4. Further, in the imaginative vision man cleaves to the similitudes of the things as to the things themselves. But in this there is deception. So as a good angel cannot be the cause of deception, it seems that he cannot cause the imaginative vision, by changing the imagination.

On the contrary, Those things which are seen in dreams are seen by imaginative vision. But the angels reveal things in dreams, as appears from Mat. 1:20;[2]:13,[19] in regard to the angel who appeared to Joseph in dreams. Therefore an angel can move the imagination.

I answer that, Both a good and a bad angel by their own natural power can move the human imagination. This may be explained as follows. For it was said above (q. 110, a. 3), that corporeal nature obeys the angel as regards local movement, so that whatever can be caused by the local movement of bodies is subject to the natural power of the angels. Now it is manifest that imaginative apparitions are sometimes caused in us by the local movement of animal spirits and humors. Hence Aristotle says (*De Somn. et Vigil.*)*, when assigning the cause of visions in dreams, that “when an animal sleeps, the blood descends in abundance to the sensitive principle, and movements descend with it,” that is, the impressions left from the movements are preserved in the animal spirits, “and move the sensitive principle”; so that a certain appearance ensues, as if the sensitive principle were being then changed by the external objects themselves. Indeed, the commotion of the spirits and humors may be so great that such appearances may even occur to those who are awake, as is seen in mad people, and the like. So, as this happens by a natural disturbance of the humors, and sometimes also by the will of man who voluntarily imagines what he previously experienced, so also the same may be done by the power of a good or a bad angel, sometimes with alienation from the bodily senses, sometimes without such

alienation.

Reply to Objection 1. The first principle of the imagination is from the sense in act. For we cannot imagine what we have never perceived by the senses, either wholly or partly; as a man born blind cannot imagine color. Sometimes, however, the imagination is informed in such a way that the act of the imaginative movement arises from the impressions preserved within.

Reply to Objection 2. An angel changes the imagination, not indeed by the impression of an imaginative form in no way previously received from the senses (for he cannot make a man born blind imagine color), but by local movement of the spirits and humors, as above explained.

Reply to Objection 3. The commingling of the angelic spirit with the human imagination is not a mingling of essences, but by reason of an effect which he produces in the imagination in the way above stated; so that he shows man what he [the angel] knows, but not in the way he knows.

Reply to Objection 4. An angel causing an imaginative vision, sometimes enlightens the intellect at the same time, so that it knows what these images signify; and then there is not deception. But sometimes by the angelic operation the similitudes of things only appear in the imagination; but neither then is deception caused by the angel, but by the defect in the intellect to whom such things appear. Thus neither was Christ a cause of deception when He spoke many things to the people in parables, which He did not explain to them.

Whether an angel can change the human senses?

Ia q. 111 a. 4

Objection 1. It seems that an angel cannot change the human senses. For the sensitive operation is a vital operation. But such an operation does not come from an extrinsic principle. Therefore the sensitive operation cannot be caused by an angel.

Objection 2. Further, the sensitive operation is nobler than the nutritive. But the angel cannot change the nutritive power, nor other natural forms. Therefore neither can he change the sensitive power.

Objection 3. Further, the senses are naturally moved by the sensible objects. But an angel cannot change the order of nature (q. 110, a. 4). Therefore an angel cannot change the senses; but these are changed always by the sensible object.

On the contrary, The angels who overturned Sodom, “struck the people of Sodom with blindness or *aorasia*, so that they could not find the door” (Gn. 19:11).[†] The same is recorded of the Syrians whom Eliseus led into Samaria (4 Kings 6:18).

I answer that, The senses may be changed in a twofold manner; from without, as when affected by the sensible object: and from within, for we see that the senses are changed when the spirits and humors are disturbed; as for example, a sick man’s tongue, charged with choleric humor, tastes everything as bitter, and the like with the other senses. Now an angel, by his natural power, can work a change in the senses both ways. For an angel can offer the senses a sensible object from without, formed by nature or by the angel himself, as when he assumes a body, as we have said above (q. 51, a. 2). Likewise he can move the spirits and humors from within, as above remarked, whereby the senses are changed in various ways.

Reply to Objection 1. The principle of the sensitive operation cannot be without the interior principle which is the sensitive power; but this interior principle can be moved in many ways by the exterior principle, as above explained.

* *De Insomniis* iii. † It is worth noting that these are the only two passages in the Greek version where the word *aorasia* appears. It expresses, in fact, the effect produced on the people of Sodom—namely, dazzling (French version, “*éblouissement*”), which the Latin “*caecitas*” (blindness) does not necessarily imply.

Reply to Objection 2. By the interior movement of the spirits and humors an angel can do something towards changing the act of the nutritive power, and also of the appetitive and sensitive power, and of any other power using a corporeal organ.

Reply to Objection 3. An angel can do nothing

outside the entire order of creatures; but he can outside some particular order of nature, since he is not subject to that order; thus in some special way an angel can work a change in the senses outside the common mode of nature.

Objection 1. It would seem that an angel cannot enlighten man. For man is enlightened by faith; hence Dionysius (Eccl. Hier. iii) attributes enlightenment to baptism, as “the sacrament of faith.” But faith is immediately from God, according to Eph. 2:8: “By grace you are saved through faith, and that not of yourselves, for it is the gift of God.” Therefore man is not enlightened by an angel; but immediately by God.

Objection 2. Further, on the words, “God hath manifested it to them” (Rom. 1:19), the gloss observes that “not only natural reason availed for the manifestation of Divine truths to men, but God also revealed them by His work,” that is, by His creature. But both are immediately from God—that is, natural reason and the creature. Therefore God enlightens man immediately.

Objection 3. Further, whoever is enlightened is conscious of being enlightened. But man is not conscious of being enlightened by angels. Therefore he is not enlightened by them.

On the contrary, Dionysius says (Coel. Hier. iv) that the revelation of Divine things reaches men through the ministry of the angels. But such revelation is an enlightenment as we have stated (q. 106, a. 1; q. 107, a. 2). Therefore men are enlightened by the angels.

I answer that, Since the order of Divine Providence disposes that lower things be subject to the actions of higher, as explained above (q. 109, a. 2); as the inferior angels are enlightened by the superior, so men, who are inferior to the angels, are enlightened by them.

The modes of each of these kinds of enlightenment are in one way alike and in another way unlike. For, as was shown above (q. 106, a. 1), the enlightenment which consists in making known Divine truth has two functions; namely, according as the inferior intellect is strengthened by the action of the superior intellect, and according as the intelligible species which are in the superior intellect are proposed to the inferior so as to be grasped thereby. This takes place in the angels when the superior angel divides his universal concept of the truth according to the capacity of the inferior angel, as explained above (q. 106, a. 1).

The human intellect, however, cannot grasp the universal truth itself unveiled; because its nature requires

it to understand by turning to the phantasms, as above explained (q. 84, a. 7). So the angels propose the intelligible truth to men under the similitudes of sensible things, according to what Dionysius says (Coel. Hier. i), that, “It is impossible for the divine ray to shine on us, otherwise than shrouded by the variety of the sacred veils.” On the other hand, the human intellect as the inferior, is strengthened by the action of the angelic intellect. And in these two ways man is enlightened by an angel.

Reply to Objection 1. Two dispositions concur in the virtue of faith; first, the habit of the intellect whereby it is disposed to obey the will tending to Divine truth. For the intellect assents to the truth of faith, not as convinced by the reason, but as commanded by the will; hence Augustine says, “No one believes except willingly.” In this respect faith comes from God alone. Secondly, faith requires that what is to be believed be proposed to the believer; which is accomplished by man, according to Rom. 10:17, “Faith cometh by hearing”; principally, however, by the angels, by whom Divine things are revealed to men. Hence the angels have some part in the enlightenment of faith. Moreover, men are enlightened by the angels not only concerning what is to be believed; but also as regards what is to be done.

Reply to Objection 2. Natural reason, which is immediately from God, can be strengthened by an angel, as we have said above. Again, the more the human intellect is strengthened, so much higher an intelligible truth can be elicited from the species derived from creatures. Thus man is assisted by an angel so that he may obtain from creatures a more perfect knowledge of God.

Reply to Objection 3. Intellectual operation and enlightenment can be understood in two ways. First, on the part of the object understood; thus whoever understands or is enlightened, knows that he understands or is enlightened, because he knows that the object is made known to him. Secondly, on the part of the principle; and thus it does not follow that whoever understands a truth, knows what the intellect is, which is the principle of the intellectual operation. In like manner not everyone who is enlightened by an angel, knows that he is enlightened by him.

Objection 1. It would seem that the angels can change the will of man. For, upon the text, “Who maketh His angels spirits and His ministers a flame of fire” (Heb. 1:7), the gloss notes that “they are fire, as being spiritually fervent, and as burning away our vices.” This could not be, however, unless they changed the will. Therefore the angels can change the will.

Objection 2. Further, Bede says (Super Matth. xv, 11), that, “the devil does not send wicked thoughts, but kindles them.” Damascene, however, says that he also sends them; for he remarks that “every malicious act and unclean passion is contrived by the demons and put into men” (De Fide Orth. ii, 4); in like manner also the good angels introduce and kindle good thoughts. But this could only be if they changed the will. Therefore the will is changed by them.

Objection 3. Further, the angel, as above explained, enlightens the human intellect by means of the phantasms. But as the imagination which serves the intellect can be changed by an angel, so can the sensitive appetite which serves the will, because it also is a faculty using a corporeal organ. Therefore as the angel enlightens the mind, so can he change the will.

On the contrary, To change the will belongs to God alone, according to Prov. 21:1: “The heart of the king is in the hand of the Lord, whithersoever He will He shall turn it.”

I answer that, The will can be changed in two ways. First, from within; in which way, since the movement of the will is nothing but the inclination of the will to the thing willed, God alone can thus change the will, because He gives the power of such an inclination to the intellectual nature. For as the natural inclination is from God alone Who gives the nature, so the inclination of the will is from God alone, Who causes the will.

Secondly, the will is moved from without. As re-

gards an angel, this can be only in one way—by the good apprehended by the intellect. Hence in as far as anyone may be the cause why anything be apprehended as an appetible good, so far does he move the will. In this way also God alone can move the will efficaciously; but an angel and man move the will by way of persuasion, as above explained (q. 106, a. 2).

In addition to this mode the human will can be moved from without in another way; namely, by the passion residing in the sensitive appetite: thus by concupiscence or anger the will is inclined to will something. In this manner the angels, as being able to rouse these passions, can move the will, not however by necessity, for the will ever remains free to consent to, or to resist, the passion.

Reply to Objection 1. Those who act as God’s ministers, either men or angels, are said to burn away vices, and to incite to virtue by way of persuasion.

Reply to Objection 2. The demon cannot put thoughts in our minds by causing them from within, since the act of the cogitative faculty is subject to the will; nevertheless the devil is called the kindler of thoughts, inasmuch as he incites to thought, by the desire of the things thought of, by way of persuasion, or by rousing the passions. Damascene calls this kindling “a putting in” because such a work is accomplished within. But good thoughts are attributed to a higher principle, namely, God, though they may be procured by the ministry of the angels.

Reply to Objection 3. The human intellect in its present state can understand only by turning to the phantasms; but the human will can will something following the judgment of reason rather than the passion of the sensitive appetite. Hence the comparison does not hold.

Objection 1. It would seem that an angel cannot change man's imagination. For the phantasy, as is said *De Anima* iii, is "a motion caused by the sense in act." But if this motion were caused by an angel, it would not be caused by the sense in act. Therefore it is contrary to the nature of the phantasy, which is the act of the imaginative faculty, to be changed by an angel.

Objection 2. Further, since the forms in the imagination are spiritual, they are nobler than the forms existing in sensible matter. But an angel cannot impress forms upon sensible matter (q. 110, a. 2). Therefore he cannot impress forms on the imagination, and so he cannot change it.

Objection 3. Further, Augustine says (*Gen. ad lit.* xii, 12): "One spirit by intermingling with another can communicate his knowledge to the other spirit by these images, so that the latter either understands it himself, or accepts it as understood by the other." But it does not seem that an angel can be mingled with the human imagination, nor that the imagination can receive the knowledge of an angel. Therefore it seems that an angel cannot change the imagination.

Objection 4. Further, in the imaginative vision man cleaves to the similitudes of the things as to the things themselves. But in this there is deception. So as a good angel cannot be the cause of deception, it seems that he cannot cause the imaginative vision, by changing the imagination.

On the contrary, Those things which are seen in dreams are seen by imaginative vision. But the angels reveal things in dreams, as appears from *Mat.* 1:20;[2]:13,[19] in regard to the angel who appeared to Joseph in dreams. Therefore an angel can move the imagination.

I answer that, Both a good and a bad angel by their own natural power can move the human imagination. This may be explained as follows. For it was said above (q. 110, a. 3), that corporeal nature obeys the angel as regards local movement, so that whatever can be caused by the local movement of bodies is subject to the natural power of the angels. Now it is manifest that imaginative apparitions are sometimes caused in us by the local movement of animal spirits and humors. Hence Aristotle says (*De Somn. et Vigil.*)*, when assigning the cause of visions in dreams, that "when an animal sleeps, the blood descends in abundance to the sensitive

principle, and movements descend with it," that is, the impressions left from the movements are preserved in the animal spirits, "and move the sensitive principle"; so that a certain appearance ensues, as if the sensitive principle were being then changed by the external objects themselves. Indeed, the commotion of the spirits and humors may be so great that such appearances may even occur to those who are awake, as is seen in mad people, and the like. So, as this happens by a natural disturbance of the humors, and sometimes also by the will of man who voluntarily imagines what he previously experienced, so also the same may be done by the power of a good or a bad angel, sometimes with alienation from the bodily senses, sometimes without such alienation.

Reply to Objection 1. The first principle of the imagination is from the sense in act. For we cannot imagine what we have never perceived by the senses, either wholly or partly; as a man born blind cannot imagine color. Sometimes, however, the imagination is informed in such a way that the act of the imaginative movement arises from the impressions preserved within.

Reply to Objection 2. An angel changes the imagination, not indeed by the impression of an imaginative form in no way previously received from the senses (for he cannot make a man born blind imagine color), but by local movement of the spirits and humors, as above explained.

Reply to Objection 3. The commingling of the angelic spirit with the human imagination is not a mingling of essences, but by reason of an effect which he produces in the imagination in the way above stated; so that he shows man what he [the angel] knows, but not in the way he knows.

Reply to Objection 4. An angel causing an imaginative vision, sometimes enlightens the intellect at the same time, so that it knows what these images signify; and then there is not deception. But sometimes by the angelic operation the similitudes of things only appear in the imagination; but neither then is deception caused by the angel, but by the defect in the intellect to whom such things appear. Thus neither was Christ a cause of deception when He spoke many things to the people in parables, which He did not explain to them.

* *De Insomniis* iii.

Objection 1. It seems that an angel cannot change the human senses. For the sensitive operation is a vital operation. But such an operation does not come from an extrinsic principle. Therefore the sensitive operation cannot be caused by an angel.

Objection 2. Further, the sensitive operation is nobler than the nutritive. But the angel cannot change the nutritive power, nor other natural forms. Therefore neither can he change the sensitive power.

Objection 3. Further, the senses are naturally moved by the sensible objects. But an angel cannot change the order of nature (q. 110, a. 4). Therefore an angel cannot change the senses; but these are changed always by the sensible object.

On the contrary, The angels who overturned Sodom, “struck the people of Sodom with blindness or *aorasia*, so that they could not find the door” (Gn. 19:11).^{*} The same is recorded of the Syrians whom Eliseus led into Samaria (4 Kings 6:18).

I answer that, The senses may be changed in a twofold manner; from without, as when affected by the sensible object: and from within, for we see that the senses are changed when the spirits and humors are disturbed; as for example, a sick man’s tongue, charged with choleric humor, tastes everything as bitter, and the

like with the other senses. Now an angel, by his natural power, can work a change in the senses both ways. For an angel can offer the senses a sensible object from without, formed by nature or by the angel himself, as when he assumes a body, as we have said above (q. 51, a. 2). Likewise he can move the spirits and humors from within, as above remarked, whereby the senses are changed in various ways.

Reply to Objection 1. The principle of the sensitive operation cannot be without the interior principle which is the sensitive power; but this interior principle can be moved in many ways by the exterior principle, as above explained.

Reply to Objection 2. By the interior movement of the spirits and humors an angel can do something towards changing the act of the nutritive power, and also of the appetitive and sensitive power, and of any other power using a corporeal organ.

Reply to Objection 3. An angel can do nothing outside the entire order of creatures; but he can outside some particular order of nature, since he is not subject to that order; thus in some special way an angel can work a change in the senses outside the common mode of nature.

^{*} It is worth noting that these are the only two passages in the Greek version where the word *aorasia* appears. It expresses, in fact, the effect produced on the people of Sodom—namely, dazzling (French version, “*éblouissement*”), which the Latin “*caecitas*” (blindness) does not necessarily imply.

FIRST PART, QUESTION 112

The Mission of the Angels (In Four Articles)

We next consider the mission of the angels. Under this head arise four points of inquiry:

- (1) Whether any angels are sent on works of ministry?
- (2) Whether all are sent?
- (3) Whether those who are sent, assist?
- (4) From what orders they are sent.

Whether the angels are sent on works of ministry?

Ia q. 112 a. 1

Objection 1. It would seem that the angels are not sent on works of ministry. For every mission is to some determinate place. But intellectual actions do not determine a place, for intellect abstracts from the “here” and “now.” Since therefore the angelic actions are intellectual, it appears that the angels are not sent to perform their own actions.

Objection 2. Further, the empyrean heaven is the place that beseems the angelic dignity. Therefore if they are sent to us in ministry, it seems that something of their dignity would be lost; which is unseemly.

Objection 3. Further, external occupation hinders the contemplation of wisdom; hence it is said: “He that is less in action, shall receive wisdom” (Ecclus. 38:25). So if some angels are sent on external ministrations, they would seemingly be hindered from contemplation. But the whole of their beatitude consists in the contemplation of God. So if they were sent, their beatitude would be lessened; which is unfitting.

Objection 4. Further, to minister is the part of an inferior; hence it is written (Lk. 22:27): “Which is the greater, he that sitteth at table, or he that serveth? is not he that sitteth at table?” But the angels are naturally greater than we are. Therefore they are not sent to administer to us.

On the contrary, It is written (Ex. 23:20): “Behold I will send My angels who shall go before thee.”

I answer that, From what has been said above (q. 108, a. 6), it may be shown that some angels are sent in ministry by God. For, as we have already stated (q. 43, a. 1), in treating of the mission of the Divine Persons, he is said to be sent who in any way proceeds from another so as to begin to be where he was not, or to be in another way, where he already was. Thus the Son, or the Holy Ghost is said to be sent as proceeding from the Father by origin; and begins to be in a new way, by grace or by the nature assumed, where He was before by the presence of His Godhead; for it belongs to God to be present everywhere, because, since He is the universal agent, His power reaches to all being, and hence He exists in all things (q. 8, a. 1). An angel’s power, however, as a particular agent, does not reach to the whole universe, but reaches to one thing in such a way as not to reach another; and so he is “here” in such a manner

as not to be “there.” But it is clear from what was above stated (q. 110, a. 1), that the corporeal creature is governed by the angels. Hence, whenever an angel has to perform any work concerning a corporeal creature, the angel applies himself anew to that body by his power; and in that way begins to be there afresh. Now all this takes place by Divine command. Hence it follows that an angel is sent by God.

Yet the action performed by the angel who is sent, proceeds from God as from its first principle, at Whose nod and by Whose authority the angels work; and is reduced to God as to its last end. Now this is what is meant by a minister: for a minister is an intelligent instrument; while an instrument is moved by another, and its action is ordered to another. Hence angels’ actions are called ‘ministries’; and for this reason they are said to be sent in ministry.

Reply to Objection 1. An operation can be intellectual in two ways. In one way, as dwelling in the intellect itself, as contemplation; such an operation does not demand to occupy a place; indeed, as Augustine says (De Trin. iv, 20): “Even we ourselves as mentally tasting something eternal, are not in this world.” In another sense an action is said to be intellectual because it is regulated and commanded by some intellect; in that sense the intellectual operations evidently have sometimes a determinate place.

Reply to Objection 2. The empyrean heaven belongs to the angelic dignity by way of congruity; forasmuch as it is congruous that the higher body should be attributed to that nature which occupies a rank above bodies. Yet an angel does not derive his dignity from the empyrean heaven; so when he is not actually in the empyrean heaven, nothing of his dignity is lost, as neither does a king lessen his dignity when not actually sitting on his regal throne, which suits his dignity.

Reply to Objection 3. In ourselves the purity of contemplation is obscured by exterior occupation; because we give ourselves to action through the sensitive faculties, the action of which when intense impedes the action of the intellectual powers. An angel, on the contrary, regulates his exterior actions by intellectual operation alone. Hence it follows that his external occupations in no respect impede his contemplation; because

given two actions, one of which is the rule and the reason of the other, one does not hinder but helps the other. Wherefore Gregory says (Moral. ii) that “the angels do not go abroad in such a manner as to lose the delights of inward contemplation.”

Reply to Objection 4. In their external actions the

angels chiefly minister to God, and secondarily to us; not because we are superior to them, absolutely speaking, but because, since every man or angel by cleaving to God is made one spirit with God, he is thereby superior to every creature. Hence the Apostle says (Phil. 2:3): “Esteeming others better than themselves.”

Whether all the angels are sent in ministry?

Ia q. 112 a. 2

Objection 1. It would seem that all the angels are sent in ministry. For the Apostle says (Heb. 1:14): “All are ministering spirits, sent to minister” [Vulg. ‘Are they not all. . .?’].

Objection 2. Further, among the orders, the highest is that of the Seraphim, as stated above (q. 108, a. 6). But a Seraph was sent to purify the lips of the prophet (Is. 6:6,7). Therefore much more are the inferior orders sent.

Objection 3. Further, the Divine Persons infinitely excel all the angelic orders. But the Divine Persons are sent. Therefore much more are even the highest angels sent.

Objection 4. Further, if the superior angels are not sent to the external ministries, this can only be because the superior angels execute the Divine ministries by means of the inferior angels. But as all the angels are unequal, as stated above (q. 50, a. 4), each angel has an angel inferior to himself except the last one. Therefore only the last angel would be sent in ministry; which contradicts the words, “Thousands of thousands ministered to Him” (Dan. 7:10).

On the contrary, Gregory says (Hom. xxxiv in Evang.), quoting the statement of Dionysius (Coel. Hier. xiii), that “the higher ranks fulfil no exterior service.”

I answer that, As appears from what has been said above (q. 106, a. 3; q. 110, a. 1), the order of Divine Providence has so disposed not only among the angels, but also in the whole universe, that inferior things are administered by the superior. But the Divine dispensation, however, this order is sometimes departed from as regards corporeal things, for the sake of a higher order, that is, according as it is suitable for the manifestation of grace. That the man born blind was enlightened, that Lazarus was raised from the dead, was accomplished immediately by God without the action of the heavenly bodies. Moreover both good and bad angels can work

some effect in these bodies independently of the heavenly bodies, by the condensation of the clouds to rain, and by producing some such effects. Nor can anyone doubt that God can immediately reveal things to men without the help of the angels, and the superior angels without the inferior. From this standpoint some have said that according to the general law the superior angels are not sent, but only the inferior; yet that sometimes, by Divine dispensation, the superior angels also are sent.

It may also be said that the Apostle wishes to prove that Christ is greater than the angels who were chosen as the messengers of the law; in order that He might show the excellence of the new over the old law. Hence there is no need to apply this to any other angels besides those who were sent to give the law.

Reply to Objection 2. According to Dionysius (Coel. Hier. xiii), the angel who was sent to purify the prophet’s lips was one of the inferior order; but was called a “Seraph,” that is, “kindling” in an equivocal sense, because he came to “kindle” the lips of the prophet. It may also be said that the superior angels communicate their own proper gifts whereby they are denominated, through the ministry of the inferior angels. Thus one of the Seraphim is described as purifying by fire the prophet’s lips, not as if he did so immediately, but because an inferior angel did so by his power; as the Pope is said to absolve a man when he gives absolution by means of someone else.

Reply to Objection 3. The Divine Persons are not sent in ministry, but are said to be sent in an equivocal sense, as appears from what has been said (q. 43, a. 1).

Reply to Objection 4. A manifold grade exists in the Divine ministries. Hence there is nothing to prevent angels though unequal from being sent immediately in ministry, in such a manner however that the superior are sent to the higher ministries, and the lower to the inferior ministries.

Whether all the angels who are sent, assist?

Ia q. 112 a. 3

Objection 1. It would seem that the angels who are sent also assist. For Gregory says (Hom. xxxiv in Evang.): “So the angels are sent, and assist; for, though the angelic spirit is limited, yet the supreme Spirit, God, is not limited.”

Objection 2. Further, the angel was sent to adminis-

ter to Tobias. Yet he said, “I am the angel Raphael, one of the seven who stand before the Lord” (Tob. 12:15). Therefore the angels who are sent, assist.

Objection 3. Further, every holy angel is nearer to God than Satan is. Yet Satan assisted God, according to Job 1:6: “When the sons of God came to stand before

the Lord, Satan also was present among them.” Therefore much more do the angels, who are sent to minister, assist.

Objection 4. Further, if the inferior angels do not assist, the reason is because they receive the Divine enlightenment, not immediately, but through the superior angels. But every angel receives the Divine enlightenment from a superior, except the one who is highest of all. Therefore only the highest angel would assist; which is contrary to the text of Dan. 7:10: “Ten thousand times a hundred thousand stood before Him.” Therefore the angels who are sent also assist.

On the contrary, Gregory says, on Job 25:3: “Is there any numbering of His soldiers?” (Moral. xvii): “Those powers assist, who do not go forth as messengers to men.” Therefore those who are sent in ministry do not assist.

I answer that, The angels are spoken of as “assisting” and “administering,” after the likeness of those who attend upon a king; some of whom ever wait upon him, and hear his commands immediately; while others there are to whom the royal commands are conveyed by those who are in attendance—for instance, those who are placed at the head of the administration of various cities; these are said to administer, not to assist.

We must therefore observe that all the angels gaze

upon the Divine Essence immediately; in regard to which all, even those who minister, are said to assist. Hence Gregory says (Moral. ii) that “those who are sent on the external ministry of our salvation can always assist and see the face of the Father.” Yet not all the angels can perceive the secrets of the Divine mysteries in the clearness itself of the Divine Essence; but only the superior angels who announce them to the inferior: and in that respect only the superior angels belonging to the highest hierarchy are said to assist, whose special prerogative it is to be enlightened immediately by God.

From this may be deduced the reply to the first and second objections, which are based on the first mode of assisting.

Reply to Objection 3. Satan is not described as having assisted, but as present among the assistants; for, as Gregory says (Moral. ii), “though he has lost beatitude, still he has retained a nature like to the angels.”

Reply to Objection 4. All the assistants see some things immediately in the glory of the Divine Essence; and so it may be said that it is the prerogative of the whole of the highest hierarchy to be immediately enlightened by God; while the higher ones among them see more than is seen by the inferior; some of whom enlighten others: as also among those who assist the king, one knows more of the king’s secrets than another.

Whether all the angels of the second hierarchy are sent?

Ia q. 112 a. 4

Objection 1. It would seem that all the angels of the second hierarchy are sent. For all the angels either assist, or minister, according to Dan. 7:10. But the angels of the second hierarchy do not assist; for they are enlightened by the angels of the first hierarchy, as Dionysius says (Coel. Hier. viii). Therefore all the angels of the second hierarchy are sent in ministry.

Objection 2. Further, Gregory says (Moral. xvii) that “there are more who minister than who assist.” This would not be the case if the angels of the second hierarchy were not sent in ministry. Therefore all the angels of the second hierarchy are sent to minister.

On the contrary, Dionysius says (Coel. Hier. viii) that the “Dominations are above all subjection.” But to be sent implies subjection. Therefore the dominations are not sent to minister.

I answer that, As above stated (a. 1), to be sent to external ministry properly belongs to an angel according as he acts by Divine command in respect of any corporeal creature; which is part of the execution of the Divine ministry. Now the angelic properties are manifested by their names, as Dionysius says (Coel. Hier. vii); and therefore the angels of those orders are sent to external ministry whose names signify some kind of administration. But the name “dominations” does not signify any such administration, but only disposition and command in administering. On the other hand, the names of the inferior orders imply administration, for

the “Angels” and “Archangels” are so called from “announcing”; the “Virtues” and “Powers” are so called in respect of some act; and it is right that the “Prince,” according to what Gregory says (Hom. xxxiv in Evang.), “be first among the workers.” Hence it belongs to these five orders to be sent to external ministry; not to the four superior orders.

Reply to Objection 1. The Dominations are reckoned among the ministering angels, not as exercising but as disposing and commanding what is to be done by others; thus an architect does not put his hands to the production of his art, but only disposes and orders what others are to do.

Reply to Objection 2. A twofold reason may be given in assigning the number of the assisting and ministering angels. For Gregory says that those who minister are more numerous than those who assist; because he takes the words (Dan. 7:10) “thousands of thousands ministered to Him,” not in a multiple but in a partitive sense, to mean “thousands out of thousands”; thus the number of those who minister is indefinite, and signifies excess; while the number of assistants is finite as in the words added, “and ten thousand times a hundred thousand assisted Him.” This explanation rests on the opinion of the Platonists, who said that the nearer things are to the one first principle, the smaller they are in number; as the nearer a number is to unity, the lesser it is than multitude. This opinion is verified as regards the

number of orders, as six administer and three assist.

Dionysius, however, (Coel. Hier. xiv) declares that the multitude of angels surpasses all the multitude of material things; so that, as the superior bodies exceed the inferior in magnitude to an immeasurable degree, so the superior incorporeal natures surpass all corporeal natures in multitude; because whatever is better is more intended and more multiplied by God. Hence, as the assistants are superior to the ministers there will be more assistants than ministers. In this way, the words “thousands of thousands” are taken by way of multiplication, to signify “a thousand times a thousand.” And because

ten times a hundred is a thousand, if it were said “ten times a hundred thousand” it would mean that there are as many assistants as ministers: but since it is written “ten thousand times a hundred thousand,” we are given to understand that the assistants are much more numerous than the ministers. Nor is this said to signify that this is the precise number of angels, but rather that it is much greater, in that it exceeds all material multitude. This is signified by the multiplication together of all the greatest numbers, namely ten, a hundred, and a thousand, as Dionysius remarks in the same passage.

Objection 1. It would seem that the angels are not sent on works of ministry. For every mission is to some determinate place. But intellectual actions do not determine a place, for intellect abstracts from the “here” and “now.” Since therefore the angelic actions are intellectual, it appears that the angels are not sent to perform their own actions.

Objection 2. Further, the empyrean heaven is the place that befits the angelic dignity. Therefore if they are sent to us in ministry, it seems that something of their dignity would be lost; which is unseemly.

Objection 3. Further, external occupation hinders the contemplation of wisdom; hence it is said: “He that is less in action, shall receive wisdom” (Ecclus. 38:25). So if some angels are sent on external ministrations, they would seemingly be hindered from contemplation. But the whole of their beatitude consists in the contemplation of God. So if they were sent, their beatitude would be lessened; which is unfitting.

Objection 4. Further, to minister is the part of an inferior; hence it is written (Lk. 22:27): “Which is the greater, he that sitteth at table, or he that serveth? is not he that sitteth at table?” But the angels are naturally greater than we are. Therefore they are not sent to administer to us.

On the contrary, It is written (Ex. 23:20): “Behold I will send My angels who shall go before thee.”

I answer that, From what has been said above (q. 108, a. 6), it may be shown that some angels are sent in ministry by God. For, as we have already stated (q. 43, a. 1), in treating of the mission of the Divine Persons, he is said to be sent who in any way proceeds from another so as to begin to be where he was not, or to be in another way, where he already was. Thus the Son, or the Holy Ghost is said to be sent as proceeding from the Father by origin; and begins to be in a new way, by grace or by the nature assumed, where He was before by the presence of His Godhead; for it belongs to God to be present everywhere, because, since He is the universal agent, His power reaches to all being, and hence He exists in all things (q. 8, a. 1). An angel’s power, however, as a particular agent, does not reach to the whole universe, but reaches to one thing in such a way as not to reach another; and so he is “here” in such a manner as not to be “there.” But it is clear from what was above stated (q. 110, a. 1), that the corporeal creature is governed by the angels. Hence, whenever an angel has to perform any work concerning a corporeal creature, the angel applies himself anew to that body by his power; and in that way begins to be there afresh. Now all this

takes place by Divine command. Hence it follows that an angel is sent by God.

Yet the action performed by the angel who is sent, proceeds from God as from its first principle, at Whose nod and by Whose authority the angels work; and is reduced to God as to its last end. Now this is what is meant by a minister: for a minister is an intelligent instrument; while an instrument is moved by another, and its action is ordered to another. Hence angels’ actions are called ‘ministries’; and for this reason they are said to be sent in ministry.

Reply to Objection 1. An operation can be intellectual in two ways. In one way, as dwelling in the intellect itself, as contemplation; such an operation does not demand to occupy a place; indeed, as Augustine says (De Trin. iv, 20): “Even we ourselves as mentally tasting something eternal, are not in this world.” In another sense an action is said to be intellectual because it is regulated and commanded by some intellect; in that sense the intellectual operations evidently have sometimes a determinate place.

Reply to Objection 2. The empyrean heaven belongs to the angelic dignity by way of congruity; forasmuch as it is congruous that the higher body should be attributed to that nature which occupies a rank above bodies. Yet an angel does not derive his dignity from the empyrean heaven; so when he is not actually in the empyrean heaven, nothing of his dignity is lost, as neither does a king lessen his dignity when not actually sitting on his regal throne, which suits his dignity.

Reply to Objection 3. In ourselves the purity of contemplation is obscured by exterior occupation; because we give ourselves to action through the sensitive faculties, the action of which when intense impedes the action of the intellectual powers. An angel, on the contrary, regulates his exterior actions by intellectual operation alone. Hence it follows that his external occupations in no respect impede his contemplation; because given two actions, one of which is the rule and the reason of the other, one does not hinder but helps the other. Wherefore Gregory says (Moral. ii) that “the angels do not go abroad in such a manner as to lose the delights of inward contemplation.”

Reply to Objection 4. In their external actions the angels chiefly minister to God, and secondarily to us; not because we are superior to them, absolutely speaking, but because, since every man or angel by cleaving to God is made one spirit with God, he is thereby superior to every creature. Hence the Apostle says (Phil. 2:3): “Esteeming others better than themselves.”

Objection 1. It would seem that all the angels are sent in ministry. For the Apostle says (Heb. 1:14): “All are ministering spirits, sent to minister” [Vulg. ‘Are they not all...?’].

Objection 2. Further, among the orders, the highest is that of the Seraphim, as stated above (q. 108, a. 6). But a Seraph was sent to purify the lips of the prophet (Is. 6:6,7). Therefore much more are the inferior orders sent.

Objection 3. Further, the Divine Persons infinitely excel all the angelic orders. But the Divine Persons are sent. Therefore much more are even the highest angels sent.

Objection 4. Further, if the superior angels are not sent to the external ministries, this can only be because the superior angels execute the Divine ministries by means of the inferior angels. But as all the angels are unequal, as stated above (q. 50, a. 4), each angel has an angel inferior to himself except the last one. Therefore only the last angel would be sent in ministry; which contradicts the words, “Thousands of thousands ministered to Him” (Dan. 7:10).

On the contrary, Gregory says (Hom. xxxiv in Evang.), quoting the statement of Dionysius (Coel. Hier. xiii), that “the higher ranks fulfil no exterior service.”

I answer that, As appears from what has been said above (q. 106, a. 3; q. 110, a. 1), the order of Divine Providence has so disposed not only among the angels, but also in the whole universe, that inferior things are administered by the superior. But the Divine dispensation, however, this order is sometimes departed from as regards corporeal things, for the sake of a higher order, that is, according as it is suitable for the manifestation of grace. That the man born blind was enlightened, that Lazarus was raised from the dead, was accomplished immediately by God without the action of the heavenly bodies. Moreover both good and bad angels can work

some effect in these bodies independently of the heavenly bodies, by the condensation of the clouds to rain, and by producing some such effects. Nor can anyone doubt that God can immediately reveal things to men without the help of the angels, and the superior angels without the inferior. From this standpoint some have said that according to the general law the superior angels are not sent, but only the inferior; yet that sometimes, by Divine dispensation, the superior angels also are sent.

It may also be said that the Apostle wishes to prove that Christ is greater than the angels who were chosen as the messengers of the law; in order that He might show the excellence of the new over the old law. Hence there is no need to apply this to any other angels besides those who were sent to give the law.

Reply to Objection 2. According to Dionysius (Coel. Hier. xiii), the angel who was sent to purify the prophet’s lips was one of the inferior order; but was called a “Seraph,” that is, “kindling” in an equivocal sense, because he came to “kindle” the lips of the prophet. It may also be said that the superior angels communicate their own proper gifts whereby they are denominated, through the ministry of the inferior angels. Thus one of the Seraphim is described as purifying by fire the prophet’s lips, not as if he did so immediately, but because an inferior angel did so by his power; as the Pope is said to absolve a man when he gives absolution by means of someone else.

Reply to Objection 3. The Divine Persons are not sent in ministry, but are said to be sent in an equivocal sense, as appears from what has been said (q. 43, a. 1).

Reply to Objection 4. A manifold grade exists in the Divine ministries. Hence there is nothing to prevent angels though unequal from being sent immediately in ministry, in such a manner however that the superior are sent to the higher ministries, and the lower to the inferior ministries.

Objection 1. It would seem that the angels who are sent also assist. For Gregory says (Hom. xxxiv in Evang.): “So the angels are sent, and assist; for, though the angelic spirit is limited, yet the supreme Spirit, God, is not limited.”

Objection 2. Further, the angel was sent to administer to Tobias. Yet he said, “I am the angel Raphael, one of the seven who stand before the Lord” (Tob. 12:15). Therefore the angels who are sent, assist.

Objection 3. Further, every holy angel is nearer to God than Satan is. Yet Satan assisted God, according to Job 1:6: “When the sons of God came to stand before the Lord, Satan also was present among them.” Therefore much more do the angels, who are sent to minister, assist.

Objection 4. Further, if the inferior angels do not assist, the reason is because they receive the Divine enlightenment, not immediately, but through the superior angels. But every angel receives the Divine enlightenment from a superior, except the one who is highest of all. Therefore only the highest angel would assist; which is contrary to the text of Dan. 7:10: “Ten thousand times a hundred thousand stood before Him.” Therefore the angels who are sent also assist.

On the contrary, Gregory says, on Job 25:3: “Is there any numbering of His soldiers?” (Moral. xvii): “Those powers assist, who do not go forth as messengers to men.” Therefore those who are sent in ministry do not assist.

I answer that, The angels are spoken of as “assisting” and “administering,” after the likeness of those who attend upon a king; some of whom ever wait upon

him, and hear his commands immediately; while others there are to whom the royal commands are conveyed by those who are in attendance—for instance, those who are placed at the head of the administration of various cities; these are said to administer, not to assist.

We must therefore observe that all the angels gaze upon the Divine Essence immediately; in regard to which all, even those who minister, are said to assist. Hence Gregory says (Moral. ii) that “those who are sent on the external ministry of our salvation can always assist and see the face of the Father.” Yet not all the angels can perceive the secrets of the Divine mysteries in the clearness itself of the Divine Essence; but only the superior angels who announce them to the inferior: and in that respect only the superior angels belonging to the highest hierarchy are said to assist, whose special prerogative it is to be enlightened immediately by God.

From this may be deduced the reply to the first and second objections, which are based on the first mode of assisting.

Reply to Objection 3. Satan is not described as having assisted, but as present among the assistants; for, as Gregory says (Moral. ii), “though he has lost beatitude, still he has retained a nature like to the angels.”

Reply to Objection 4. All the assistants see some things immediately in the glory of the Divine Essence; and so it may be said that it is the prerogative of the whole of the highest hierarchy to be immediately enlightened by God; while the higher ones among them see more than is seen by the inferior; some of whom enlighten others: as also among those who assist the king, one knows more of the king’s secrets than another.

Objection 1. It would seem that all the angels of the second hierarchy are sent. For all the angels either assist, or minister, according to Dan. 7:10. But the angels of the second hierarchy do not assist; for they are enlightened by the angels of the first hierarchy, as Dionysius says (Coel. Hier. viii). Therefore all the angels of the second hierarchy are sent in ministry.

Objection 2. Further, Gregory says (Moral. xvii) that “there are more who minister than who assist.” This would not be the case if the angels of the second hierarchy were not sent in ministry. Therefore all the angels of the second hierarchy are sent to minister.

On the contrary, Dionysius says (Coel. Hier. viii) that the “Dominations are above all subjection.” But to be sent implies subjection. Therefore the dominations are not sent to minister.

I answer that, As above stated (a. 1), to be sent to external ministry properly belongs to an angel according as he acts by Divine command in respect of any corporeal creature; which is part of the execution of the Divine ministry. Now the angelic properties are manifested by their names, as Dionysius says (Coel. Hier. vii); and therefore the angels of those orders are sent to external ministry whose names signify some kind of administration. But the name “dominations” does not signify any such administration, but only disposition and command in administering. On the other hand, the names of the inferior orders imply administration, for the “Angels” and “Archangels” are so called from “announcing”; the “Virtues” and “Powers” are so called in respect of some act; and it is right that the “Prince,” according to what Gregory says (Hom. xxxiv in Evang.), “be first among the workers.” Hence it belongs to these five orders to be sent to external ministry; not to the four superior orders.

Reply to Objection 1. The Dominations are reckoned among the ministering angels, not as exercising but as disposing and commanding what is to be done by others; thus an architect does not put his hands to the production of his art, but only disposes and orders what

others are to do.

Reply to Objection 2. A twofold reason may be given in assigning the number of the assisting and ministering angels. For Gregory says that those who minister are more numerous than those who assist; because he takes the words (Dan. 7:10) “thousands of thousands ministered to Him,” not in a multiple but in a partitive sense, to mean “thousands out of thousands”; thus the number of those who minister is indefinite, and signifies excess; while the number of assistants is finite as in the words added, “and ten thousand times a hundred thousand assisted Him.” This explanation rests on the opinion of the Platonists, who said that the nearer things are to the one first principle, the smaller they are in number; as the nearer a number is to unity, the lesser it is than multitude. This opinion is verified as regards the number of orders, as six administer and three assist.

Dionysius, however, (Coel. Hier. xiv) declares that the multitude of angels surpasses all the multitude of material things; so that, as the superior bodies exceed the inferior in magnitude to an immeasurable degree, so the superior incorporeal natures surpass all corporeal natures in multitude; because whatever is better is more intended and more multiplied by God. Hence, as the assistants are superior to the ministers there will be more assistants than ministers. In this way, the words “thousands of thousands” are taken by way of multiplication, to signify “a thousand times a thousand.” And because ten times a hundred is a thousand, if it were said “ten times a hundred thousand” it would mean that there are as many assistants as ministers: but since it is written “ten thousand times a hundred thousand,” we are given to understand that the assistants are much more numerous than the ministers. Nor is this said to signify that this is the precise number of angels, but rather that it is much greater, in that it exceeds all material multitude. This is signified by the multiplication together of all the greatest numbers, namely ten, a hundred, and a thousand, as Dionysius remarks in the same passage.

FIRST PART, QUESTION 113
Of the Guardianship of the Good Angels
(In Eight Articles)

We next consider the guardianship exercised by the good angels; and their warfare against the bad angels. Under the first head eight points of inquiry arise:

- (1) Whether men are guarded by the angels?
- (2) Whether to each man is assigned a single guardian angel?
- (3) Whether the guardianship belongs only to the lowest order of angels?
- (4) Whether it is fitting for each man to have an angel guardian?
- (5) When does an angel's guardianship of a man begin?
- (6) Whether the angel guardians always watch over men?
- (7) Whether the angel grieves over the loss of the one guarded?
- (8) Whether rivalry exists among the angels as regards their guardianship?

Whether men are guarded by the angels?

Ia q. 113 a. 1

Objection 1. It would seem that men are not guarded by the angels. For guardians are deputed to some because they either know not how, or are not able, to guard themselves, as children and the sick. But man is able to guard himself by his free-will; and knows how by his natural knowledge of natural law. Therefore man is not guarded by an angel.

Objection 2. Further, a strong guard makes a weaker one superfluous. But men are guarded by God, according to Ps. 120:4: "He shall neither slumber nor sleep, that keepeth Israel." Therefore man does not need to be guarded by an angel.

Objection 3. Further, the loss of the guarded redounds to the negligence of the guardian; hence it was said to a certain one: "Keep this man; and if he shall slip away, thy life shall be for his life" (3 Kings 20:39). Now many perish daily through falling into sin; whom the angels could help by visible appearance, or by miracles, or in some such-like way. The angels would therefore be negligent if men are given to their guardianship. But that is clearly false. Therefore the angels are not the guardians of men.

On the contrary, It is written (Ps. 90:11): "He hath given His angels charge over thee, to keep thee in all thy ways."

I answer that, According to the plan of Divine Providence, we find that in all things the movable and variable are moved and regulated by the immovable and invariable; as all corporeal things by immovable spiritual substances, and the inferior bodies by the superior which are invariable in substance. We ourselves also are regulated as regards conclusions, about which we may have various opinions, by the principles which we hold in an invariable manner. It is moreover manifest that as regards things to be done human knowledge and affection can vary and fail from good in many ways; and

so it was necessary that angels should be deputed for the guardianship of men, in order to regulate them and move them to good.

Reply to Objection 1. By free-will man can avoid evil to a certain degree, but not in any sufficient degree; forasmuch as he is weak in affection towards good on account of the manifold passions of the soul. Likewise universal natural knowledge of the law, which by nature belongs to man, to a certain degree directs man to good, but not in a sufficient degree; because in the application of the universal principles of law to particular actions man happens to be deficient in many ways. Hence it is written (Wis. 9:14): "The thoughts of mortal men are fearful, and our counsels uncertain." Thus man needs to be guarded by the angels.

Reply to Objection 2. Two things are required for a good action; first, that the affection be inclined to good, which is effected in us by the habit of mortal virtue. Secondly, that reason should discover the proper methods to make perfect the good of virtue; this the Philosopher (Ethic. vi) attributes to prudence. As regards the first, God guards man immediately by infusing into him grace and virtues; as regards the second, God guards man as his universal instructor, Whose precepts reach man by the medium of the angels, as above stated (q. 111, a. 1).

Reply to Objection 3. As men depart from the natural instinct of good by reason of a sinful passion, so also do they depart from the instigation of the good angels, which takes place invisibly when they enlighten man that he may do what is right. Hence that men perish is not to be imputed to the negligence of the angels but to the malice of men. That they sometimes appear to men visibly outside the ordinary course of nature comes from a special grace of God, as likewise that miracles occur outside the order of nature.

Objection 1. It would seem that each man is not guarded by an angel. For an angel is stronger than a man. But one man suffices to guard many men. Therefore much more can one angel guard many men.

Objection 2. Further, the lower things are brought to God through the medium of the higher, as Dionysius says (Coel. Hier. iv, xiii). But as all the angels are unequal (q. 50, a. 4), there is only one angel between whom and men there is no medium. Therefore there is only one angel who immediately keeps men.

Objection 3. Further, the greater angels are deputed to the greater offices. But it is not a greater office to keep one man more than another; since all men are naturally equal. Since therefore of all the angels one is greater than another, as Dionysius says (Coel. Hier. x), it seems that different men are not guarded by different angels.

On the contrary, On the text, “Their angels in heaven,” etc. (Mat. 8:10), Jerome says: “Great is the dignity of souls, for each one to have an angel deputed to guard it from its birth.”

I answer that, Each man has an angel guardian appointed to him. This rests upon the fact that the guardianship of angels belongs to the execution of Divine providence concerning men. But God’s providence acts differently as regards men and as regards other corruptible creatures, for they are related differently to incorruptibility. For men are not only incorruptible in the common species, but also in the proper forms of each individual, which are the rational souls, which cannot be said of other incorruptible things. Now it is manifest that the providence of God is chiefly exercised towards what remains for ever; whereas as regards things which pass away, the providence of God acts so as to order their existence to the things which are perpetual. Thus the providence of God is related to each man as it is to every genus or species of things corruptible. But, according to Gregory (Hom. xxxiv in Evang.), the different orders are deputed to the different “gen-

era” of things, for instance, the “Powers” to coerce the demons, the “Virtues” to work miracles in things corporeal; while it is probable that the different species are presided over by different angels of the same order. Hence it is also reasonable to suppose that different angels are appointed to the guardianship of different men.

Reply to Objection 1. A guardian may be assigned to a man for two reasons: first, inasmuch as a man is an individual, and thus to one man one guardian is due; and sometimes several are appointed to guard one. Secondly, inasmuch as a man is part of a community, and thus one man is appointed as guardian of a whole community; to whom it belongs to provide what concerns one man in his relation to the whole community, such as external works, which are sources of strength or weakness to others. But angel guardians are given to men also as regards invisible and occult things, concerning the salvation of each one in his own regard. Hence individual angels are appointed to guard individual men.

Reply to Objection 2. As above stated (q. 112, a. 3, ad 4), all the angels of the first hierarchy are, as to some things, enlightened by God directly; but as to other things, only the superior are directly enlightened by God, and these reveal them to the inferior. And the same also applies to the inferior orders: for a lower angel is enlightened in some respects by one of the highest, and in other respects by the one immediately above him. Thus it is possible that some one angel enlightens a man immediately, and yet has other angels beneath him whom he enlightens.

Reply to Objection 3. Although men are equal in nature, still inequality exists among them, according as Divine Providence orders some to the greater, and others to the lesser things, according to Ecclus. 33:11,12: “With much knowledge the Lord hath divided them, and diversified their ways: some of them hath He blessed and exalted, and some of them hath He cursed and brought low.” Thus it is a greater office to guard one man than another.

Objection 1. It would seem that the guardianship of men does not belong only to the lowest order of the angels. For Chrysostom says that the text (Mat. 18:10), “Their angels in heaven,” etc. is to be understood not of any angels but of the highest. Therefore the superior angels guard men.

Objection 2. Further, the Apostle says that angels “are sent to minister for them who shall receive the inheritance of salvation” (Heb. 1:14); and thus it seems that the mission of the angels is directed to the guardianship of men. But five orders are sent in external ministry (q. 112, a. 4). Therefore all the angels of the five orders are deputed to the guardianship of men.

Objection 3. Further, for the guardianship of men it seems especially necessary to coerce the demons, which belongs most of all to the Powers, according to Gregory (Hom. xxxiv in Evang.); and to work miracles, which belongs to the Virtues. Therefore these orders are also deputed to the work of guardianship, and not only the lowest order.

On the contrary, In the Psalm (90) the guardianship of men is attributed to the angels; who belong to the lowest order, according to Dionysius (Coel. Hier. v, ix).

I answer that, As above stated (a. 2), man is guarded in two ways; in one way by particular guardian-

ship, according as to each man an angel is appointed to guard him; and such guardianship belongs to the lowest order of the angels, whose place it is, according to Gregory, to announce the “lesser things”; for it seems to be the least of the angelic offices to procure what concerns the salvation of only one man. The other kind of guardianship is universal, multiplied according to the different orders. For the more universal an agent is, the higher it is. Thus the guardianship of the human race belongs to the order of “Principalities,” or perhaps to the “Archangels,” whom we call the angel princes. Hence, Michael, whom we call an archangel, is also styled “one of the princes” (Dan. 10:13). Moreover all corporeal creatures are guarded by the “Virtues”; and likewise the demons by the “Powers,” and the good spirits by the “Principalities,” according to Gregory’s opinion (Hom.

xxxiv in Ev.).

Reply to Objection 1. Chrysostom can be taken to mean the highest in the lowest order of angels; for, as Dionysius says (Coel. Hier. x) in each order there are first, middle, and last. It is, however, probable that the greater angels are deputed to keep those chosen by God for the higher degree of glory.

Reply to Objection 2. Not all the angels who are sent have guardianship of individual men; but some orders have a universal guardianship, greater or less, as above explained.

Reply to Objection 3. Even inferior angels exercise the office of the superior, as they share in their gifts, and they are executors of the superiors’ power; and in this way all the angels of the lowest order can coerce the demons, and work miracles.

Whether angels are appointed to the guardianship of all men?

Ia q. 113 a. 4

Objection 1. It would seem that angels are not appointed to the guardianship of all men. For it is written of Christ (Phil. 2:7) that “He was made in the likeness of men, and in habit found as a man.” If therefore angels are appointed to the guardianship of all men, Christ also would have had an angel guardian. But this is unseemly, for Christ is greater than all the angels. Therefore angels are not appointed to the guardianship of all men.

Objection 2. Further, Adam was the first of all men. But it was not fitting that he should have an angel guardian, at least in the state of innocence: for then he was not beset by any dangers. Therefore angels are not appointed to the guardianship of all men.

Objection 3. Further, angels are appointed to the guardianship of men, that they may take them by the hand and guide them to eternal life, encourage them to good works, and protect them against the assaults of the demons. But men who are foreknown to damnation, never attain to eternal life. Infidels, also, though at times they perform good works, do not perform them well, for they have not a right intention: for “faith directs the intention” as Augustine says (Enarr. ii in Ps. 31). Moreover, the coming of Antichrist will be “according to the working of Satan,” as it is written (2 Thess. 2:9). Therefore angels are not deputed to the guardianship of all men.

On the contrary, is the authority of Jerome quoted above (a. 2), for he says that “each soul has an angel appointed to guard it.”

I answer that, Man while in this state of life, is, as it were, on a road by which he should journey towards heaven. On this road man is threatened by many dangers both from within and from without, according to Ps. 159:4: “In this way wherein I walked, they have hidden a snare for me.” And therefore as guardians are

appointed for men who have to pass by an unsafe road, so an angel guardian is assigned to each man as long as he is a wayfarer. When, however, he arrives at the end of life he no longer has a guardian angel; but in the kingdom he will have an angel to reign with him, in hell a demon to punish him.

Reply to Objection 1. Christ as man was guided immediately by the Word of God: wherefore He needed not be guarded by an angel. Again as regards His soul, He was a comprehensor, although in regard to His passible body, He was a wayfarer. In this latter respect it was right that He should have not a guardian angel as superior to Him, but a ministering angel as inferior to Him. Whence it is written (Mat. 4:11) that “angels came and ministered to Him.”

Reply to Objection 2. In the state of innocence man was not threatened by any peril from within: because within him all was well ordered, as we have said above (q. 95, Aa. 1,3). But peril threatened from without on account of the snares of the demons; as was proved by the event. For this reason he needed a guardian angel.

Reply to Objection 3. Just as the foreknown, the infidels, and even Anti-christ, are not deprived of the interior help of natural reason; so neither are they deprived of that exterior help granted by God to the whole human race—namely the guardianship of the angels. And although the help which they receive therefrom does not result in their deserving eternal life by good works, it does nevertheless conduce to their being protected from certain evils which would hurt both themselves and others. For even the demons are held off by the good angels, lest they hurt as much as they would. In like manner Antichrist will not do as much harm as he would wish.

Objection 1. It would seem that an angel is not appointed to guard a man from his birth. For angels are “sent to minister for them who shall receive the inheritance of salvation,” as the Apostle says (Heb. 1:14). But men begin to receive the inheritance of salvation, when they are baptized. Therefore an angel is appointed to guard a man from the time of his baptism, not of his birth.

Objection 2. Further, men are guarded by angels in as far as angels enlighten and instruct them. But children are not capable of instruction as soon as they are born, for they have not the use of reason. Therefore angels are not appointed to guard children as soon as they are born.

Objection 3. Further, a child has a rational soul for some time before birth, just as well as after. But it does not appear that an angel is appointed to guard a child before its birth, for they are not then admitted to the sacraments of the Church. Therefore angels are not appointed to guard men from the moment of their birth.

On the contrary, Jerome says (vide A, 4) that “each soul has an angel appointed to guard it from its birth.”

I answer that, as Origen observes (Tract. v, super Matt.) there are two opinions on this matter. For some have held that the angel guardian is appointed at the time of baptism, others, that he is appointed at the time of birth. The latter opinion Jerome approves (vide A, 4), and with reason. For those benefits which are conferred by God on man as a Christian, begin with his baptism; such as receiving the Eucharist, and the like.

But those which are conferred by God on man as a rational being, are bestowed on him at his birth, for then it is that he receives that nature. Among the latter benefits we must count the guardianship of angels, as we have said above (Aa. 1,4). Wherefore from the very moment of his birth man has an angel guardian appointed to him.

Reply to Objection 1. Angels are sent to minister, and that efficaciously indeed, for those who shall receive the inheritance of salvation, if we consider the ultimate effect of their guardianship, which is the realizing of that inheritance. But for all that, the angelic ministrations are not withdrawn for others although they are not so efficacious as to bring them to salvation: efficacious, nevertheless, they are, inasmuch as they ward off many evils.

Reply to Objection 2. Guardianship is ordained to enlightenment by instruction, as to its ultimate and principal effect. Nevertheless it has many other effects consistent with childhood; for instance to ward off the demons, and to prevent both bodily and spiritual harm.

Reply to Objection 3. As long as the child is in the mother’s womb it is not entirely separate, but by reason of a certain intimate tie, is still part of her: just as the fruit while hanging on the tree is part of the tree. And therefore it can be said with some degree of probability, that the angel who guards the mother guards the child while in the womb. But at its birth, when it becomes separate from the mother, an angel guardian is appointed to it; as Jerome, above quoted, says.

Objection 1. It would seem that the angel guardian sometimes forsakes the man whom he is appointed to guard. For it is said (Jer. 51:9) in the person of the angels: “We would have cured Babylon, but she is not healed: let us forsake her.” And (Is. 5:5) it is written: “I will take away the hedge”—that is, “the guardianship of the angels” [gloss]—“and it shall be wasted.”

Objection 2. Further, God’s guardianship excels that of the angels. But God forsakes man at times, according to Ps. 21:2: “O God, my God, look upon me: why hast Thou forsaken me?” Much rather therefore does an angel guardian forsake man.

Objection 3. Further, according to Damascene (De Fide Orth. ii, 3), “When the angels are here with us, they are not in heaven.” But sometimes they are in heaven. Therefore sometimes they forsake us.

On the contrary, The demons are ever assailing us, according to 1 Pet. 5:8: “Your adversary the devil, as a roaring lion, goeth about, seeking whom he may devour.” Much more therefore do the good angels ever guard us.

I answer that, As appears above (a. 2), the

guardianship of the angels is an effect of Divine providence in regard to man. Now it is evident that neither man, nor anything at all, is entirely withdrawn from the providence of God: for in as far as a thing participates being, so far is it subject to the providence that extends over all being. God indeed is said to forsake man, according to the ordering of His providence, but only in so far as He allows man to suffer some defect of punishment or of fault. In like manner it must be said that the angel guardian never forsakes a man entirely, but sometimes he leaves him in some particular, for instance by not preventing him from being subject to some trouble, or even from falling into sin, according to the ordering of Divine judgments. In this sense Babylon and the House of Israel are said to have been forsaken by the angels, because their angel guardians did not prevent them from being subject to tribulation.

From this the answers are clear to the first and second objections.

Reply to Objection 3. Although an angel may forsake a man sometimes locally, he does not for that reason forsake him as to the effect of his guardianship: for

even when he is in heaven he knows what is happening to man; nor does he need time for his local motion, for he can be with man in an instant.

Whether angels grieve for the ills of those whom they guard?

Ia q. 113 a. 7

Objection 1. It would seem that angels grieve for the ills of those whom they guard. For it is written (Is. 33:7): “The angels of peace shall weep bitterly.” But weeping is a sign of grief and sorrow. Therefore angels grieve for the ills of those whom they guard.

Objection 2. Further, according to Augustine (De Civ. Dei xiv, 15), “sorrow is for those things that happen against our will.” But the loss of the man whom he has guarded is against the guardian angel’s will. Therefore angels grieve for the loss of men.

Objection 3. Further, as sorrow is contrary to joy, so penance is contrary to sin. But angels rejoice about one sinner doing penance, as we are told, Lk. 15:7. Therefore they grieve for the just man who falls into sin.

Objection 4. Further, on Numbers 18:12: “Whatever first-fruits they offer,” etc. the gloss of Origen says: “The angels are brought to judgment as to whether men have fallen through their negligence or through their own fault.” But it is reasonable for anyone to grieve for the ills which have brought him to judgment. Therefore angels grieve for men’s sins.

On the contrary, Where there is grief and sorrow, there is not perfect happiness: wherefore it is written (Apoc. 21:4): “Death shall be no more, nor mourning, nor crying, nor sorrow.” But the angels are perfectly happy. Therefore they have no cause for grief.

I answer that, Angels do not grieve, either for sins or for the pains inflicted on men. For grief and sorrow, according to Augustine (De Civ. Dei xiv, 15) are for those things which occur against our will. But nothing happens in the world contrary to the will of the angels and the other blessed, because they will cleaves entirely to the ordering of Divine justice; while nothing happens in the world save what is effected or permitted by Divine justice. Therefore simply speaking, nothing occurs in the world against the will of the blessed. For as

the Philosopher says (Ethic. iii, 1) that is called simply voluntary, which a man wills in a particular case, and at a particular time, having considered all the circumstances; although universally speaking, such a thing would not be voluntary: thus the sailor does not will the casting of his cargo into the sea, considered universally and absolutely, but on account of the threatened danger of his life, he wills it. Wherefore this is voluntary rather than involuntary, as stated in the same passage. Therefore universally and absolutely speaking the angels do not will sin and the pains inflicted on its account: but they do will the fulfilment of the ordering of Divine justice in this matter, in respect of which some are subjected to pains and are allowed to fall into sin.

Reply to Objection 1. These words of Isaias may be understood of the angels, i.e. the messengers, of Ezechias, who wept on account of the words of Rab-saces, as related Is. 37:2 seqq.: this would be the literal sense. According to the allegorical sense the “angels of peace” are the apostles and preachers who weep for men’s sins. If according to the anagogical sense this passage be expounded of the blessed angels, then the expression is metaphorical, and signifies that universally speaking the angels will the salvation of mankind: for in this sense we attribute passions to God and the angels.

The reply to the second objection appears from what has been said.

Reply to Objection 3. Both in man’s repentance and in man’s sin there is one reason for the angel’s joy, namely the fulfilment of the ordering of the Divine Providence.

Reply to Objection 4. The angels are brought into judgment for the sins of men, not as guilty, but as witnesses to convict man of weakness.

Whether there can be strife or discord among the angels?

Ia q. 113 a. 8

Objection 1. It would seem that there can be strife or discord among the angels. For it is written (Job 25:2): “Who maketh peace in His high places.” But strife is opposed to peace. Therefore among the high angels there is no strife.

Objection 2. Further, where there is perfect charity and just authority there can be no strife. But all this exists among the angels. Therefore there is no strife among the angels.

Objection 3. Further, if we say that angels strive for those whom they guard, one angel must needs take one side, and another angel the opposite side. But if one side is in the right the other side is in the wrong. It will

follow therefore, that a good angel is a compounder of wrong; which is unseemly. Therefore there is no strife among good angels.

On the contrary, It is written (Dan. 10:13): “The prince of the kingdom of the Persians resisted me one and twenty days.” But this prince of the Persians was the angel deputed to the guardianship of the kingdom of the Persians. Therefore one good angel resists the others; and thus there is strife among them.

I answer that, The raising of this question is occasioned by this passage of Daniel. Jerome explains it by saying that the prince of the kingdom of the Persians is the angel who opposed the setting free of the peo-

ple of Israel, for whom Daniel was praying, his prayers being offered to God by Gabriel. And this resistance of his may have been caused by some prince of the demons having led the Jewish captives in Persia into sin; which sin was an impediment to the efficacy of the prayer which Daniel put up for that same people.

But according to Gregory (*Moral.* xvii), the prince of the kingdom of Persia was a good angel appointed to the guardianship of that kingdom. To see therefore how one angel can be said to resist another, we must note that the Divine judgments in regard to various kingdoms and various men are executed by the angels. Now in their actions, the angels are ruled by the Divine de-

cree. But it happens at times in various kingdoms or various men there are contrary merits or demerits, so that one of them is subject to or placed over another. As to what is the ordering of Divine wisdom on such matters, the angels cannot know it unless God reveal it to them: and so they need to consult Divine wisdom thereupon. Wherefore forasmuch as they consult the Divine will concerning various contrary and opposing merits, they are said to resist one another: not that their wills are in opposition, since they are all of one mind as to the fulfilment of the Divine decree; but that the things about which they seek knowledge are in opposition.

From this the answers to the objections are clear.

Objection 1. It would seem that men are not guarded by the angels. For guardians are deputed to some because they either know not how, or are not able, to guard themselves, as children and the sick. But man is able to guard himself by his free-will; and knows how by his natural knowledge of natural law. Therefore man is not guarded by an angel.

Objection 2. Further, a strong guard makes a weaker one superfluous. But men are guarded by God, according to Ps. 120:4: "He shall neither slumber nor sleep, that keepeth Israel." Therefore man does not need to be guarded by an angel.

Objection 3. Further, the loss of the guarded redounds to the negligence of the guardian; hence it was said to a certain one: "Keep this man; and if he shall slip away, thy life shall be for his life" (3 Kings 20:39). Now many perish daily through falling into sin; whom the angels could help by visible appearance, or by miracles, or in some such-like way. The angels would therefore be negligent if men are given to their guardianship. But that is clearly false. Therefore the angels are not the guardians of men.

On the contrary, It is written (Ps. 90:11): "He hath given His angels charge over thee, to keep thee in all thy ways."

I answer that, According to the plan of Divine Providence, we find that in all things the movable and variable are moved and regulated by the immovable and invariable; as all corporeal things by immovable spiritual substances, and the inferior bodies by the superior which are invariable in substance. We ourselves also are regulated as regards conclusions, about which we may have various opinions, by the principles which we hold in an invariable manner. It is moreover manifest that as regards things to be done human knowledge and affection can vary and fail from good in many ways; and

so it was necessary that angels should be deputed for the guardianship of men, in order to regulate them and move them to good.

Reply to Objection 1. By free-will man can avoid evil to a certain degree, but not in any sufficient degree; forasmuch as he is weak in affection towards good on account of the manifold passions of the soul. Likewise universal natural knowledge of the law, which by nature belongs to man, to a certain degree directs man to good, but not in a sufficient degree; because in the application of the universal principles of law to particular actions man happens to be deficient in many ways. Hence it is written (Wis. 9:14): "The thoughts of mortal men are fearful, and our counsels uncertain." Thus man needs to be guarded by the angels.

Reply to Objection 2. Two things are required for a good action; first, that the affection be inclined to good, which is effected in us by the habit of mortal virtue. Secondly, that reason should discover the proper methods to make perfect the good of virtue; this the Philosopher (*Ethic. vi*) attributes to prudence. As regards the first, God guards man immediately by infusing into him grace and virtues; as regards the second, God guards man as his universal instructor, Whose precepts reach man by the medium of the angels, as above stated (q. 111, a. 1).

Reply to Objection 3. As men depart from the natural instinct of good by reason of a sinful passion, so also do they depart from the instigation of the good angels, which takes place invisibly when they enlighten man that he may do what is right. Hence that men perish is not to be imputed to the negligence of the angels but to the malice of men. That they sometimes appear to men visibly outside the ordinary course of nature comes from a special grace of God, as likewise that miracles occur outside the order of nature.

Objection 1. It would seem that each man is not guarded by an angel. For an angel is stronger than a man. But one man suffices to guard many men. Therefore much more can one angel guard many men.

Objection 2. Further, the lower things are brought to God through the medium of the higher, as Dionysius says (Coel. Hier. iv, xiii). But as all the angels are unequal (q. 50, a. 4), there is only one angel between whom and men there is no medium. Therefore there is only one angel who immediately keeps men.

Objection 3. Further, the greater angels are deputed to the greater offices. But it is not a greater office to keep one man more than another; since all men are naturally equal. Since therefore of all the angels one is greater than another, as Dionysius says (Coel. Hier. x), it seems that different men are not guarded by different angels.

On the contrary, On the text, “Their angels in heaven,” etc. (Mat. 8:10), Jerome says: “Great is the dignity of souls, for each one to have an angel deputed to guard it from its birth.”

I answer that, Each man has an angel guardian appointed to him. This rests upon the fact that the guardianship of angels belongs to the execution of Divine providence concerning men. But God’s providence acts differently as regards men and as regards other corruptible creatures, for they are related differently to incorruptibility. For men are not only incorruptible in the common species, but also in the proper forms of each individual, which are the rational souls, which cannot be said of other incorruptible things. Now it is manifest that the providence of God is chiefly exercised towards what remains for ever; whereas as regards things which pass away, the providence of God acts so as to order their existence to the things which are perpetual. Thus the providence of God is related to each man as it is to every genus or species of things corruptible. But, according to Gregory (Hom. xxxiv in Evang.), the different orders are deputed to the different “gen-

era” of things, for instance, the “Powers” to coerce the demons, the “Virtues” to work miracles in things corporeal; while it is probable that the different species are presided over by different angels of the same order. Hence it is also reasonable to suppose that different angels are appointed to the guardianship of different men.

Reply to Objection 1. A guardian may be assigned to a man for two reasons: first, inasmuch as a man is an individual, and thus to one man one guardian is due; and sometimes several are appointed to guard one. Secondly, inasmuch as a man is part of a community, and thus one man is appointed as guardian of a whole community; to whom it belongs to provide what concerns one man in his relation to the whole community, such as external works, which are sources of strength or weakness to others. But angel guardians are given to men also as regards invisible and occult things, concerning the salvation of each one in his own regard. Hence individual angels are appointed to guard individual men.

Reply to Objection 2. As above stated (q. 112, a. 3, ad 4), all the angels of the first hierarchy are, as to some things, enlightened by God directly; but as to other things, only the superior are directly enlightened by God, and these reveal them to the inferior. And the same also applies to the inferior orders: for a lower angel is enlightened in some respects by one of the highest, and in other respects by the one immediately above him. Thus it is possible that some one angel enlightens a man immediately, and yet has other angels beneath him whom he enlightens.

Reply to Objection 3. Although men are equal in nature, still inequality exists among them, according as Divine Providence orders some to the greater, and others to the lesser things, according to Ecclus. 33:11,12: “With much knowledge the Lord hath divided them, and diversified their ways: some of them hath He blessed and exalted, and some of them hath He cursed and brought low.” Thus it is a greater office to guard one man than another.

Objection 1. It would seem that the guardianship of men does not belong only to the lowest order of the angels. For Chrysostom says that the text (Mat. 18:10), “Their angels in heaven,” etc. is to be understood not of any angels but of the highest. Therefore the superior angels guard men.

Objection 2. Further, the Apostle says that angels “are sent to minister for them who shall receive the inheritance of salvation” (Heb. 1:14); and thus it seems that the mission of the angels is directed to the guardianship of men. But five orders are sent in external ministry (q. 112, a. 4). Therefore all the angels of the five orders are deputed to the guardianship of men.

Objection 3. Further, for the guardianship of men it seems especially necessary to coerce the demons, which belongs most of all to the Powers, according to Gregory (Hom. xxxiv in Evang.); and to work miracles, which belongs to the Virtues. Therefore these orders are also deputed to the work of guardianship, and not only the lowest order.

On the contrary, In the Psalm (90) the guardianship of men is attributed to the angels; who belong to the lowest order, according to Dionysius (Coel. Hier. v, ix).

I answer that, As above stated (a. 2), man is guarded in two ways; in one way by particular guardianship, according as to each man an angel is appointed to guard him; and such guardianship belongs to the lowest order of the angels, whose place it is, according to

Gregory, to announce the “lesser things”; for it seems to be the least of the angelic offices to procure what concerns the salvation of only one man. The other kind of guardianship is universal, multiplied according to the different orders. For the more universal an agent is, the higher it is. Thus the guardianship of the human race belongs to the order of “Principalities,” or perhaps to the “Archangels,” whom we call the angel princes. Hence, Michael, whom we call an archangel, is also styled “one of the princes” (Dan. 10:13). Moreover all corporeal creatures are guarded by the “Virtues”; and likewise the demons by the “Powers,” and the good spirits by the “Principalities,” according to Gregory’s opinion (Hom. xxxiv in Ev.).

Reply to Objection 1. Chrysostom can be taken to mean the highest in the lowest order of angels; for, as Dionysius says (Coel. Hier. x) in each order there are first, middle, and last. It is, however, probable that the greater angels are deputed to keep those chosen by God for the higher degree of glory.

Reply to Objection 2. Not all the angels who are sent have guardianship of individual men; but some orders have a universal guardianship, greater or less, as above explained.

Reply to Objection 3. Even inferior angels exercise the office of the superior, as they share in their gifts, and they are executors of the superiors’ power; and in this way all the angels of the lowest order can coerce the demons, and work miracles.

Objection 1. It would seem that angels are not appointed to the guardianship of all men. For it is written of Christ (Phil. 2:7) that “He was made in the likeness of men, and in habit found as a man.” If therefore angels are appointed to the guardianship of all men, Christ also would have had an angel guardian. But this is unseemly, for Christ is greater than all the angels. Therefore angels are not appointed to the guardianship of all men.

Objection 2. Further, Adam was the first of all men. But it was not fitting that he should have an angel guardian, at least in the state of innocence: for then he was not beset by any dangers. Therefore angels are not appointed to the guardianship of all men.

Objection 3. Further, angels are appointed to the guardianship of men, that they may take them by the hand and guide them to eternal life, encourage them to good works, and protect them against the assaults of the demons. But men who are foreknown to damnation, never attain to eternal life. Infidels, also, though at times they perform good works, do not perform them well, for they have not a right intention: for “faith directs the intention” as Augustine says (Enarr. ii in Ps. 31). Moreover, the coming of Antichrist will be “according to the working of Satan,” as it is written (2 Thess. 2:9). Therefore angels are not deputed to the guardianship of all men.

On the contrary, is the authority of Jerome quoted above (a. 2), for he says that “each soul has an angel appointed to guard it.”

I answer that, Man while in this state of life, is, as it were, on a road by which he should journey towards heaven. On this road man is threatened by many dangers both from within and from without, according to Ps. 159:4: “In this way wherein I walked, they have hidden a snare for me.” And therefore as guardians are

appointed for men who have to pass by an unsafe road, so an angel guardian is assigned to each man as long as he is a wayfarer. When, however, he arrives at the end of life he no longer has a guardian angel; but in the kingdom he will have an angel to reign with him, in hell a demon to punish him.

Reply to Objection 1. Christ as man was guided immediately by the Word of God: wherefore He needed not be guarded by an angel. Again as regards His soul, He was a comprehensor, although in regard to His passible body, He was a wayfarer. In this latter respect it was right that He should have not a guardian angel as superior to Him, but a ministering angel as inferior to Him. Whence it is written (Mat. 4:11) that “angels came and ministered to Him.”

Reply to Objection 2. In the state of innocence man was not threatened by any peril from within: because within him all was well ordered, as we have said above (q. 95, Aa. 1,3). But peril threatened from without on account of the snares of the demons; as was proved by the event. For this reason he needed a guardian angel.

Reply to Objection 3. Just as the foreknown, the infidels, and even Anti-christ, are not deprived of the interior help of natural reason; so neither are they deprived of that exterior help granted by God to the whole human race—namely the guardianship of the angels. And although the help which they receive therefrom does not result in their deserving eternal life by good works, it does nevertheless conduce to their being protected from certain evils which would hurt both themselves and others. For even the demons are held off by the good angels, lest they hurt as much as they would. In like manner Antichrist will not do as much harm as he would wish.

Objection 1. It would seem that an angel is not appointed to guard a man from his birth. For angels are “sent to minister for them who shall receive the inheritance of salvation,” as the Apostle says (Heb. 1:14). But men begin to receive the inheritance of salvation, when they are baptized. Therefore an angel is appointed to guard a man from the time of his baptism, not of his birth.

Objection 2. Further, men are guarded by angels in as far as angels enlighten and instruct them. But children are not capable of instruction as soon as they are born, for they have not the use of reason. Therefore angels are not appointed to guard children as soon as they are born.

Objection 3. Further, a child has a rational soul for some time before birth, just as well as after. But it does not appear that an angel is appointed to guard a child before its birth, for they are not then admitted to the sacraments of the Church. Therefore angels are not appointed to guard men from the moment of their birth.

On the contrary, Jerome says (vide A, 4) that “each soul has an angel appointed to guard it from its birth.”

I answer that, as Origen observes (Tract. v, super Matt.) there are two opinions on this matter. For some have held that the angel guardian is appointed at the time of baptism, others, that he is appointed at the time of birth. The latter opinion Jerome approves (vide A, 4), and with reason. For those benefits which are conferred by God on man as a Christian, begin with his baptism; such as receiving the Eucharist, and the like.

But those which are conferred by God on man as a rational being, are bestowed on him at his birth, for then it is that he receives that nature. Among the latter benefits we must count the guardianship of angels, as we have said above (Aa. 1,4). Wherefore from the very moment of his birth man has an angel guardian appointed to him.

Reply to Objection 1. Angels are sent to minister, and that efficaciously indeed, for those who shall receive the inheritance of salvation, if we consider the ultimate effect of their guardianship, which is the realizing of that inheritance. But for all that, the angelic ministrations are not withdrawn for others although they are not so efficacious as to bring them to salvation: efficacious, nevertheless, they are, inasmuch as they ward off many evils.

Reply to Objection 2. Guardianship is ordained to enlightenment by instruction, as to its ultimate and principal effect. Nevertheless it has many other effects consistent with childhood; for instance to ward off the demons, and to prevent both bodily and spiritual harm.

Reply to Objection 3. As long as the child is in the mother’s womb it is not entirely separate, but by reason of a certain intimate tie, is still part of her: just as the fruit while hanging on the tree is part of the tree. And therefore it can be said with some degree of probability, that the angel who guards the mother guards the child while in the womb. But at its birth, when it becomes separate from the mother, an angel guardian is appointed to it; as Jerome, above quoted, says.

Objection 1. It would seem that the angel guardian sometimes forsakes the man whom he is appointed to guard. For it is said (Jer. 51:9) in the person of the angels: “We would have cured Babylon, but she is not healed: let us forsake her.” And (Is. 5:5) it is written: “I will take away the hedge”—that is, “the guardianship of the angels” [gloss]—“and it shall be wasted.”

Objection 2. Further, God’s guardianship excels that of the angels. But God forsakes man at times, according to Ps. 21:2: “O God, my God, look upon me: why hast Thou forsaken me?” Much rather therefore does an angel guardian forsake man.

Objection 3. Further, according to Damascene (*De Fide Orth.* ii, 3), “When the angels are here with us, they are not in heaven.” But sometimes they are in heaven. Therefore sometimes they forsake us.

On the contrary, The demons are ever assailing us, according to 1 Pet. 5:8: “Your adversary the devil, as a roaring lion, goeth about, seeking whom he may devour.” Much more therefore do the good angels ever guard us.

I answer that, As appears above (a. 2), the guardianship of the angels is an effect of Divine providence in regard to man. Now it is evident that neither

man, nor anything at all, is entirely withdrawn from the providence of God: for in as far as a thing participates being, so far is it subject to the providence that extends over all being. God indeed is said to forsake man, according to the ordering of His providence, but only in so far as He allows man to suffer some defect of punishment or of fault. In like manner it must be said that the angel guardian never forsakes a man entirely, but sometimes he leaves him in some particular, for instance by not preventing him from being subject to some trouble, or even from falling into sin, according to the ordering of Divine judgments. In this sense Babylon and the House of Israel are said to have been forsaken by the angels, because their angel guardians did not prevent them from being subject to tribulation.

From this the answers are clear to the first and second objections.

Reply to Objection 3. Although an angel may forsake a man sometimes locally, he does not for that reason forsake him as to the effect of his guardianship: for even when he is in heaven he knows what is happening to man; nor does he need time for his local motion, for he can be with man in an instant.

Objection 1. It would seem that angels grieve for the ills of those whom they guard. For it is written (Is. 33:7): “The angels of peace shall weep bitterly.” But weeping is a sign of grief and sorrow. Therefore angels grieve for the ills of those whom they guard.

Objection 2. Further, according to Augustine (De Civ. Dei xiv, 15), “sorrow is for those things that happen against our will.” But the loss of the man whom he has guarded is against the guardian angel’s will. Therefore angels grieve for the loss of men.

Objection 3. Further, as sorrow is contrary to joy, so penance is contrary to sin. But angels rejoice about one sinner doing penance, as we are told, Lk. 15:7. Therefore they grieve for the just man who falls into sin.

Objection 4. Further, on Numbers 18:12: “Whatever first-fruits they offer,” etc. the gloss of Origen says: “The angels are brought to judgment as to whether men have fallen through their negligence or through their own fault.” But it is reasonable for anyone to grieve for the ills which have brought him to judgment. Therefore angels grieve for men’s sins.

On the contrary, Where there is grief and sorrow, there is not perfect happiness: wherefore it is written (Apoc. 21:4): “Death shall be no more, nor mourning, nor crying, nor sorrow.” But the angels are perfectly happy. Therefore they have no cause for grief.

I answer that, Angels do not grieve, either for sins or for the pains inflicted on men. For grief and sorrow, according to Augustine (De Civ. Dei xiv, 15) are for those things which occur against our will. But nothing happens in the world contrary to the will of the angels and the other blessed, because they will cleaves entirely to the ordering of Divine justice; while nothing happens in the world save what is effected or permitted by Divine justice. Therefore simply speaking, nothing occurs in the world against the will of the blessed. For as

the Philosopher says (Ethic. iii, 1) that is called simply voluntary, which a man wills in a particular case, and at a particular time, having considered all the circumstances; although universally speaking, such a thing would not be voluntary: thus the sailor does not will the casting of his cargo into the sea, considered universally and absolutely, but on account of the threatened danger of his life, he wills it. Wherefore this is voluntary rather than involuntary, as stated in the same passage. Therefore universally and absolutely speaking the angels do not will sin and the pains inflicted on its account: but they do will the fulfilment of the ordering of Divine justice in this matter, in respect of which some are subjected to pains and are allowed to fall into sin.

Reply to Objection 1. These words of Isaias may be understood of the angels, i.e. the messengers, of Ezechias, who wept on account of the words of Rab-saces, as related Is. 37:2 seqq.: this would be the literal sense. According to the allegorical sense the “angels of peace” are the apostles and preachers who weep for men’s sins. If according to the analogical sense this passage be expounded of the blessed angels, then the expression is metaphorical, and signifies that universally speaking the angels will the salvation of mankind: for in this sense we attribute passions to God and the angels.

The reply to the second objection appears from what has been said.

Reply to Objection 3. Both in man’s repentance and in man’s sin there is one reason for the angel’s joy, namely the fulfilment of the ordering of the Divine Providence.

Reply to Objection 4. The angels are brought into judgment for the sins of men, not as guilty, but as witnesses to convict man of weakness.

Objection 1. It would seem that there can be strife or discord among the angels. For it is written (Job 25:2): “Who maketh peace in His high places.” But strife is opposed to peace. Therefore among the high angels there is no strife.

Objection 2. Further, where there is perfect charity and just authority there can be no strife. But all this exists among the angels. Therefore there is no strife among the angels.

Objection 3. Further, if we say that angels strive for those whom they guard, one angel must needs take one side, and another angel the opposite side. But if one side is in the right the other side is in the wrong. It will follow therefore, that a good angel is a compounder of wrong; which is unseemly. Therefore there is no strife among good angels.

On the contrary, It is written (Dan. 10:13): “The prince of the kingdom of the Persians resisted me one and twenty days.” But this prince of the Persians was the angel deputed to the guardianship of the kingdom of the Persians. Therefore one good angel resists the others; and thus there is strife among them.

I answer that, The raising of this question is occasioned by this passage of Daniel. Jerome explains it by saying that the prince of the kingdom of the Persians is the angel who opposed the setting free of the peo-

ple of Israel, for whom Daniel was praying, his prayers being offered to God by Gabriel. And this resistance of his may have been caused by some prince of the demons having led the Jewish captives in Persia into sin; which sin was an impediment to the efficacy of the prayer which Daniel put up for that same people.

But according to Gregory (Moral. xvii), the prince of the kingdom of Persia was a good angel appointed to the guardianship of that kingdom. To see therefore how one angel can be said to resist another, we must note that the Divine judgments in regard to various kingdoms and various men are executed by the angels. Now in their actions, the angels are ruled by the Divine decree. But it happens at times in various kingdoms or various men there are contrary merits or demerits, so that one of them is subject to or placed over another. As to what is the ordering of Divine wisdom on such matters, the angels cannot know it unless God reveal it to them: and so they need to consult Divine wisdom thereupon. Wherefore forasmuch as they consult the Divine will concerning various contrary and opposing merits, they are said to resist one another: not that their wills are in opposition, since they are all of one mind as to the fulfilment of the Divine decree; but that the things about which they seek knowledge are in opposition.

From this the answers to the objections are clear.

FIRST PART, QUESTION 114

Of the Assaults of the Demons (In Five Articles)

We now consider the assaults of the demons. Under this head there are five points of inquiry:

- (1) Whether men are assailed by the demons?
- (2) Whether to tempt is proper to the devil?
- (3) Whether all the sins of men are to be set down to the assaults or temptations of the demons?
- (4) Whether they can work real miracles for the purpose of leading men astray?
- (5) Whether the demons who are overcome by men, are hindered from making further assaults?

Whether men are assailed by the demons?

Ia q. 114 a. 1

Objection 1. It would seem that men are not assailed by the demons. For angels are sent by God to guard man. But demons are not sent by God: for the demons' intention is the loss of souls; whereas God's is the salvation of souls. Therefore demons are not deputed to assail man.

Objection 2. Further, it is not a fair fight, for the weak to be set against the strong, and the ignorant against the astute. But men are weak and ignorant, whereas the demons are strong and astute. It is not therefore to be permitted by God, the author of all justice, that men should be assailed by demons.

Objection 3. Further, the assaults of the flesh and the world are enough for man's exercise. But God permits His elect to be assailed that they may be exercised. Therefore there is no need for them to be assailed by the demons.

On the contrary, The Apostle says (Eph. 6:12): "Our wrestling is not against flesh and blood; but against Principalities and Powers, against the rulers of the world of this darkness, against the spirits of wickedness in the high places."

I answer that, Two things may be considered in the assault of the demons—the assault itself, and the ordering thereof. The assault itself is due to the malice of the demons, who through envy endeavor to hinder man's progress; and through pride usurp a semblance of Divine power, by deputing certain ministers to assail man, as the angels of God in their various offices minister to man's salvation. But the ordering of the assault is from

God, Who knows how to make orderly use of evil by ordering it to good. On the other hand, in regard to the angels, both their guardianship and the ordering thereof are to be referred to God as their first author.

Reply to Objection 1. The wicked angels assail men in two ways. Firstly by instigating them to sin; and thus they are not sent by God to assail us, but are sometimes permitted to do so according to God's just judgments. But sometimes their assault is a punishment to man: and thus they are sent by God; as the lying spirit was sent to punish Achab, King of Israel, as is related in 3 Kings 22:20. For punishment is referred to God as its first author. Nevertheless the demons who are sent to punish, do so with an intention other than that for which they are sent; for they punish from hatred or envy; whereas they are sent by God on account of His justice.

Reply to Objection 2. In order that the conditions of the fight be not unequal, there is as regards man the promised recompense, to be gained principally through the grace of God, secondarily through the guardianship of the angels. Wherefore (4 Kings 6:16), Eliseus said to his servant: "Fear not, for there are more with us than with them."

Reply to Objection 3. The assault of the flesh and the world would suffice for the exercise of human weakness: but it does not suffice for the demon's malice, which makes use of both the above in assailing men. But by the Divine ordinance this tends to the glory of the elect.

Whether to tempt is proper to the devil?

Ia q. 114 a. 2

Objection 1. It would seem that to tempt is not proper to the devil. For God is said to tempt, according to Gn. 22:1, "God tempted Abraham." Moreover man is tempted by the flesh and the world. Again, man is said to tempt God, and to tempt man. Therefore it is not proper to the devil to tempt.

Objection 2. Further, to tempt is a sign of ignorance. But the demons know what happens among men. Therefore the demons do not tempt.

Objection 3. Further, temptation is the road to sin. Now sin dwells in the will. Since therefore the demons cannot change man's will, as appears from what has been said above (q. 111, a. 2), it seems that it is not in their province to tempt.

On the contrary, It is written (1 Thess. 3:5): "Lest perhaps he that tempteth should have tempted you": to which the gloss adds, "that is, the devil, whose office it is to tempt."

I answer that, To tempt is, properly speaking, to make trial of something. Now we make trial of something in order to know something about it: hence the immediate end of every tempter is knowledge. But sometimes another end, either good or bad, is sought to be acquired through that knowledge; a good end, when, for instance, one desires to know of someone, what sort of a man he is as to knowledge, or virtue, with a view to his promotion; a bad end, when that knowledge is sought with the purpose of deceiving or ruining him.

From this we can gather how various beings are said to tempt in various ways. For man is said to tempt, sometimes indeed merely for the sake of knowing something; and for this reason it is a sin to tempt God; for man, being uncertain as it were, presumes to make an experiment of God's power. Sometimes too he tempts in order to help, sometimes in order to hurt. The devil, however, always tempts in order to hurt by urging man into sin. In this sense it is said to be his proper office to tempt: for thought at times man tempts thus, he does this as minister of the devil. God is said to tempt that He may know, in the same sense as that is said to know which makes others to know. Hence it is written (Dt.

13:3): "The Lord your God trieth you, that it may appear whether you love him."

The flesh and the world are said to tempt as the instruments or matter of temptations; inasmuch as one can know what sort of man someone is, according as he follows or resists the desires of the flesh, and according as he despises worldly advantages and adversity: of which things the devil also makes use in tempting.

Thus the reply to the first objection is clear.

Reply to Objection 2. The demons know what happens outwardly among men; but the inward disposition of man God alone knows, Who is the "weigher of spirits" (Prov. 16:2). It is this disposition that makes man more prone to one vice than to another: hence the devil tempts, in order to explore this inward disposition of man, so that he may tempt him to that vice to which he is most prone.

Reply to Objection 3. Although a demon cannot change the will, yet, as stated above (q. 111, a. 3), he can change the inferior powers of man, in a certain degree: by which powers, though the will cannot be forced, it can nevertheless be inclined.

Whether all sins are due to the temptation of the devil?

Ia q. 114 a. 3

Objection 1. It would seem that all sins are due to the temptation of the devil. For Dionysius says (Div. Nom. iv) that "the multitude of demons is the cause of all evils, both to themselves and to others." And Damascene says (De Fide Orth. ii, 4) that "all malice and all uncleanness have been devised by the devil."

Objection 2. Further, of every sinner can be said what the Lord said of the Jews (Jn. 8:44): "You are of your father the devil." But this was in as far as they sinned through the devil's instigation. Therefore every sin is due to the devil's instigation.

Objection 3. Further, as angels are deputed to guard men, so demons are deputed to assail men. But every good thing we do is due to the suggestion of the good angels: because the Divine gifts are borne to us by the angels. Therefore all the evil we do, is due to the instigation of the devil.

On the contrary, It is written (De Eccl. Dogmat. xlix): "Not all our evil thoughts are stirred up by the devil, but sometimes they arise from the movement of our free-will."

I answer that, One thing can be the cause of another in two ways; directly and indirectly. Indirectly as when an agent is the cause of a disposition to a certain effect, it is said to be the occasional and indirect cause of that effect: for instance, we might say that he who dries the wood is the cause of the wood burning. In this way we must admit that the devil is the cause of all our sins; because he it was who instigated the first man to sin, from whose sin there resulted a proneness to sin in the whole human race: and in this sense we must take

the words of Damascene and Dionysius.

But a thing is said to be the direct cause of something, when its action tends directly thereunto. And in this way the devil is not the cause of every sin: for all sins are not committed at the devil's instigation, but some are due to the free-will and the corruption of the flesh. For, as Origen says (Peri Archon iii), even if there were no devil, men would have the desire for food and love and such like pleasures; with regard to which many disorders may arise unless those desires are curbed by reason, especially if we presuppose the corruption of our natures. Now it is in the power of the free-will to curb this appetite and keep it in order. Consequently there is no need for all sins to be due to the instigation of the devil. But those sins which are due thereto man perpetrates "through being deceived by the same blandishments as were our first parents," as Isidore says (De Summo Bono ii).

Thus the answer to the first objection is clear.

Reply to Objection 2. When man commits sin without being thereto instigated by the devil, he nevertheless becomes a child of the devil thereby, in so far as he imitates him who was the first to sin.

Reply to Objection 3. Man can of his own accord fall into sin: but he cannot advance in merit without the Divine assistance, which is borne to man by the ministry of the angels. For this reason the angels take part in all our good works: whereas all our sins are not due to the demons' instigation. Nevertheless there is no kind of sin which is not sometimes due to the demons' suggestion.

Objection 1. It would seem that the demons cannot lead men astray by means of real miracles. For the activity of the demons will show itself especially in the works of Antichrist. But as the Apostle says (2 Thess. 2:9), his “coming is according to the working of Satan, in all power, and signs, and lying wonders.” Much more therefore at other times do the demons perform lying wonders.

Objection 2. Further, true miracles are wrought by some corporeal change. But demons are unable to change the nature of a body; for Augustine says (De Civ. Dei xviii, 18): “I cannot believe that the human body can receive the limbs of a beast by means of a demon’s art or power.” Therefore the demons cannot work real miracles.

Objection 3. Further, an argument is useless which may prove both ways. If therefore real miracles can be wrought by demons, to persuade one of what is false, they will be useless to confirm the teaching of the faith. This is unfitting; for it is written (Mk. 16:20): “The Lord working withal, and confirming the word with signs that followed.”

On the contrary, Augustine says (q. 83,*): “Often by means of the magic art miracles are wrought like those which are wrought by the servants of God.”

I answer that, As is clear from what has been said above (q. 110, a. 4), if we take a miracle in the strict sense, the demons cannot work miracles, nor can any creature, but God alone: since in the strict sense a miracle is something done outside the order of the entire created nature, under which order every power of a creature is contained. But sometimes miracle may be taken in a wide sense, for whatever exceeds the human power and experience. And thus demons can work miracles, that is, things which rouse man’s astonishment, by reason of their being beyond his power and outside his sphere of knowledge. For even a man by doing what is beyond the power and knowledge of another, leads him to marvel at what he has done, so that in a way he seems to that man to have worked a miracle.

It is to be noted, however, that although these works of demons which appear marvelous to us are not real miracles, they are sometimes nevertheless something real. Thus the magicians of Pharaoh by the demons’ power produced real serpents and frogs. And “when fire came down from heaven and at one blow consumed Job’s servants and sheep; when the storm struck down his house and with it his children—these were the work of Satan, not phantoms”; as Augustine says (De Civ. Dei xx, 19).

Reply to Objection 1. As Augustine says in the same place, the works of Antichrist may be called lying wonders, “either because he will deceive men’s senses

by means of phantoms, so that he will not really do what he will seem to do; or because, if he work real prodigies, they will lead those into falsehood who believe in him.”

Reply to Objection 2. As we have said above (q. 110, a. 2), corporeal matter does not obey either good or bad angels at their will, so that demons be able by their power to transmute matter from one form to another; but they can employ certain seeds that exist in the elements of the world, in order to produce these effects, as Augustine says (De Trin. iii, 8,9). Therefore it must be admitted that all the transformation of corporeal things which can be produced by certain natural powers, to which we must assign the seeds above mentioned, can alike be produced by the operation of the demons, by the employment of these seeds; such as the transformation of certain things into serpents or frogs, which can be produced by putrefaction. On the contrary, those transformations which cannot be produced by the power of nature, cannot in reality be effected by the operation of the demons; for instance, that the human body be changed into the body of a beast, or that the body of a dead man return to life. And if at times something of this sort seems to be effected by the operation of demons, it is not real but a mere semblance of reality.

Now this may happen in two ways. Firstly, from within; in this way a demon can work on man’s imagination and even on his corporeal senses, so that something seems otherwise that it is, as explained above (q. 111, Aa. 3,4). It is said indeed that this can be done sometimes by the power of certain bodies. Secondly, from without: for just as he can from the air form a body of any form and shape, and assume it so as to appear in it visibly: so, in the same way he can clothe any corporeal thing with any corporeal form, so as to appear therein. This is what Augustine says (De Civ. Dei xviii, 18): “Man’s imagination, which whether thinking or dreaming, takes the forms of an innumerable number of things, appears to other men’s senses, as it were embodied in the semblance of some animal.” This not to be understood as though the imagination itself or the images formed therein were identified with that which appears embodied to the senses of another man: but that the demon, who forms an image in a man’s imagination, can offer the same picture to another man’s senses.

Reply to Objection 3. As Augustine says (QQ. 83, qu. 79): “When magicians do what holy men do, they do it for a different end and by a different right. The former do it for their own glory; the latter, for the glory of God: the former, by certain private compacts; the latter by the evident assistance and command of God, to Whom every creature is subject.”

* Lib. xxi, Sent. sent 4, among the supposititious works of St. Augustine

Objection 1. It would seem that a demon who is overcome by a man, is not for that reason hindered from any further assault. For Christ overcame the tempter most effectively. Yet afterwards the demon assailed Him by instigating the Jews to kill Him. Therefore it is not true that the devil when conquered ceases his assaults.

Objection 2. Further, to inflict punishment on one who has been worsted in a fight, is to incite him to a sharper attack. But this is not befitting God's mercy. Therefore the conquered demons are not prevented from further assaults.

On the contrary, It is written (Mat. 4:11): "Then the devil left Him," i.e. Christ Who overcame.

I answer that, Some say that when once a demon has been overcome he can no more tempt any man at all, neither to the same nor to any other sin. And others say that he can tempt others, but not the same man. This

seems more probable as long as we understand it to be so for a certain definite time: wherefore (Lk. 4:13) it is written: "All temptation being ended, the devil departed from Him for a time." There are two reasons for this. One is on the part of God's clemency; for as Chrysostom says (Super Matt. Hom. v)*, "the devil does not tempt man for just as long as he likes, but for as long as God allows; for although He allows him to tempt for a short time, He orders him off on account of our weakness." The other reason is taken from the astuteness of the devil. As to this, Ambrose says on Lk. 4:13: "The devil is afraid of persisting, because he shrinks from frequent defeat." That the devil does nevertheless sometimes return to the assault, is apparent from Mat. 12:44: "I will return into my house from whence I came out."

From what has been said, the objections can easily be solved.

* In the Opus Imperfectum, among his supposititious works

Objection 1. It would seem that men are not assailed by the demons. For angels are sent by God to guard man. But demons are not sent by God: for the demons' intention is the loss of souls; whereas God's is the salvation of souls. Therefore demons are not deputed to assail man.

Objection 2. Further, it is not a fair fight, for the weak to be set against the strong, and the ignorant against the astute. But men are weak and ignorant, whereas the demons are strong and astute. It is not therefore to be permitted by God, the author of all justice, that men should be assailed by demons.

Objection 3. Further, the assaults of the flesh and the world are enough for man's exercise. But God permits His elect to be assailed that they may be exercised. Therefore there is no need for them to be assailed by the demons.

On the contrary, The Apostle says (Eph. 6:12): "Our wrestling is not against flesh and blood; but against Principalities and Powers, against the rulers of the world of this darkness, against the spirits of wickedness in the high places."

I answer that, Two things may be considered in the assault of the demons—the assault itself, and the ordering thereof. The assault itself is due to the malice of the demons, who through envy endeavor to hinder man's progress; and through pride usurp a semblance of Divine power, by deputing certain ministers to assail man, as the angels of God in their various offices minister to man's salvation. But the ordering of the assault is from

God, Who knows how to make orderly use of evil by ordering it to good. On the other hand, in regard to the angels, both their guardianship and the ordering thereof are to be referred to God as their first author.

Reply to Objection 1. The wicked angels assail men in two ways. Firstly by instigating them to sin; and thus they are not sent by God to assail us, but are sometimes permitted to do so according to God's just judgments. But sometimes their assault is a punishment to man: and thus they are sent by God; as the lying spirit was sent to punish Achab, King of Israel, as is related in 3 Kings 22:20. For punishment is referred to God as its first author. Nevertheless the demons who are sent to punish, do so with an intention other than that for which they are sent; for they punish from hatred or envy; whereas they are sent by God on account of His justice.

Reply to Objection 2. In order that the conditions of the fight be not unequal, there is as regards man the promised recompense, to be gained principally through the grace of God, secondarily through the guardianship of the angels. Wherefore (4 Kings 6:16), Eliseus said to his servant: "Fear not, for there are more with us than with them."

Reply to Objection 3. The assault of the flesh and the world would suffice for the exercise of human weakness: but it does not suffice for the demon's malice, which makes use of both the above in assailing men. But by the Divine ordinance this tends to the glory of the elect.

Objection 1. It would seem that to tempt is not proper to the devil. For God is said to tempt, according to Gn. 22:1, “God tempted Abraham.” Moreover man is tempted by the flesh and the world. Again, man is said to tempt God, and to tempt man. Therefore it is not proper to the devil to tempt.

Objection 2. Further, to tempt is a sign of ignorance. But the demons know what happens among men. Therefore the demons do not tempt.

Objection 3. Further, temptation is the road to sin. Now sin dwells in the will. Since therefore the demons cannot change man’s will, as appears from what has been said above (q. 111, a. 2), it seems that it is not in their province to tempt.

On the contrary, It is written (1 Thess. 3:5): “Lest perhaps he that tempteth should have tempted you”: to which the gloss adds, “that is, the devil, whose office it is to tempt.”

I answer that, To tempt is, properly speaking, to make trial of something. Now we make trial of something in order to know something about it: hence the immediate end of every tempter is knowledge. But sometimes another end, either good or bad, is sought to be acquired through that knowledge; a good end, when, for instance, one desires to know of someone, what sort of a man he is as to knowledge, or virtue, with a view to his promotion; a bad end, when that knowledge is sought with the purpose of deceiving or ruining him.

From this we can gather how various beings are said to tempt in various ways. For man is said to tempt, sometimes indeed merely for the sake of knowing something; and for this reason it is a sin to tempt God; for

man, being uncertain as it were, presumes to make an experiment of God’s power. Sometimes too he tempts in order to help, sometimes in order to hurt. The devil, however, always tempts in order to hurt by urging man into sin. In this sense it is said to be his proper office to tempt: for though at times man tempts thus, he does this as minister of the devil. God is said to tempt that He may know, in the same sense as that is said to know which makes others to know. Hence it is written (Dt. 13:3): “The Lord your God trieth you, that it may appear whether you love him.”

The flesh and the world are said to tempt as the instruments or matter of temptations; inasmuch as one can know what sort of man someone is, according as he follows or resists the desires of the flesh, and according as he despises worldly advantages and adversity: of which things the devil also makes use in tempting.

Thus the reply to the first objection is clear.

Reply to Objection 2. The demons know what happens outwardly among men; but the inward disposition of man God alone knows, Who is the “weigher of spirits” (Prov. 16:2). It is this disposition that makes man more prone to one vice than to another: hence the devil tempts, in order to explore this inward disposition of man, so that he may tempt him to that vice to which he is most prone.

Reply to Objection 3. Although a demon cannot change the will, yet, as stated above (q. 111, a. 3), he can change the inferior powers of man, in a certain degree: by which powers, though the will cannot be forced, it can nevertheless be inclined.

Objection 1. It would seem that all sins are due to the temptation of the devil. For Dionysius says (Div. Nom. iv) that “the multitude of demons is the cause of all evils, both to themselves and to others.” And Damascene says (De Fide Orth. ii, 4) that “all malice and all uncleanness have been devised by the devil.”

Objection 2. Further, of every sinner can be said what the Lord said of the Jews (Jn. 8:44): “You are of your father the devil.” But this was in as far as they sinned through the devil’s instigation. Therefore every sin is due to the devil’s instigation.

Objection 3. Further, as angels are deputed to guard men, so demons are deputed to assail men. But every good thing we do is due to the suggestion of the good angels: because the Divine gifts are borne to us by the angels. Therefore all the evil we do, is due to the instigation of the devil.

On the contrary, It is written (De Eccl. Dogmat. xlix): “Not all our evil thoughts are stirred up by the devil, but sometimes they arise from the movement of our free-will.”

I answer that, One thing can be the cause of another in two ways; directly and indirectly. Indirectly as when an agent is the cause of a disposition to a certain effect, it is said to be the occasional and indirect cause of that effect: for instance, we might say that he who dries the wood is the cause of the wood burning. In this way we must admit that the devil is the cause of all our sins; because he it was who instigated the first man to sin, from whose sin there resulted a proneness to sin in the whole human race: and in this sense we must take

the words of Damascene and Dionysius.

But a thing is said to be the direct cause of something, when its action tends directly thereunto. And in this way the devil is not the cause of every sin: for all sins are not committed at the devil’s instigation, but some are due to the free-will and the corruption of the flesh. For, as Origen says (Peri Archon iii), even if there were no devil, men would have the desire for food and love and such like pleasures; with regard to which many disorders may arise unless those desires are curbed by reason, especially if we presuppose the corruption of our natures. Now it is in the power of the free-will to curb this appetite and keep it in order. Consequently there is no need for all sins to be due to the instigation of the devil. But those sins which are due thereto man perpetrates “through being deceived by the same blandishments as were our first parents,” as Isidore says (De Summo Bono ii).

Thus the answer to the first objection is clear.

Reply to Objection 2. When man commits sin without being thereto instigated by the devil, he nevertheless becomes a child of the devil thereby, in so far as he imitates him who was the first to sin.

Reply to Objection 3. Man can of his own accord fall into sin: but he cannot advance in merit without the Divine assistance, which is borne to man by the ministry of the angels. For this reason the angels take part in all our good works: whereas all our sins are not due to the demons’ instigation. Nevertheless there is no kind of sin which is not sometimes due to the demons’ suggestion.

Objection 1. It would seem that the demons cannot lead men astray by means of real miracles. For the activity of the demons will show itself especially in the works of Antichrist. But as the Apostle says (2 Thess. 2:9), his “coming is according to the working of Satan, in all power, and signs, and lying wonders.” Much more therefore at other times do the demons perform lying wonders.

Objection 2. Further, true miracles are wrought by some corporeal change. But demons are unable to change the nature of a body; for Augustine says (De Civ. Dei xviii, 18): “I cannot believe that the human body can receive the limbs of a beast by means of a demon’s art or power.” Therefore the demons cannot work real miracles.

Objection 3. Further, an argument is useless which may prove both ways. If therefore real miracles can be wrought by demons, to persuade one of what is false, they will be useless to confirm the teaching of the faith. This is unfitting; for it is written (Mk. 16:20): “The Lord working withal, and confirming the word with signs that followed.”

On the contrary, Augustine says (q. 83,*): “Often by means of the magic art miracles are wrought like those which are wrought by the servants of God.”

I answer that, As is clear from what has been said above (q. 110, a. 4), if we take a miracle in the strict sense, the demons cannot work miracles, nor can any creature, but God alone: since in the strict sense a miracle is something done outside the order of the entire created nature, under which order every power of a creature is contained. But sometimes miracle may be taken in a wide sense, for whatever exceeds the human power and experience. And thus demons can work miracles, that is, things which rouse man’s astonishment, by reason of their being beyond his power and outside his sphere of knowledge. For even a man by doing what is beyond the power and knowledge of another, leads him to marvel at what he has done, so that in a way he seems to that man to have worked a miracle.

It is to be noted, however, that although these works of demons which appear marvelous to us are not real miracles, they are sometimes nevertheless something real. Thus the magicians of Pharaoh by the demons’ power produced real serpents and frogs. And “when fire came down from heaven and at one blow consumed Job’s servants and sheep; when the storm struck down his house and with it his children—these were the work of Satan, not phantoms”; as Augustine says (De Civ. Dei xx, 19).

Reply to Objection 1. As Augustine says in the same place, the works of Antichrist may be called lying wonders, “either because he will deceive men’s senses

by means of phantoms, so that he will not really do what he will seem to do; or because, if he work real prodigies, they will lead those into falsehood who believe in him.”

Reply to Objection 2. As we have said above (q. 110, a. 2), corporeal matter does not obey either good or bad angels at their will, so that demons be able by their power to transmute matter from one form to another; but they can employ certain seeds that exist in the elements of the world, in order to produce these effects, as Augustine says (De Trin. iii, 8,9). Therefore it must be admitted that all the transformation of corporeal things which can be produced by certain natural powers, to which we must assign the seeds above mentioned, can alike be produced by the operation of the demons, by the employment of these seeds; such as the transformation of certain things into serpents or frogs, which can be produced by putrefaction. On the contrary, those transformations which cannot be produced by the power of nature, cannot in reality be effected by the operation of the demons; for instance, that the human body be changed into the body of a beast, or that the body of a dead man return to life. And if at times something of this sort seems to be effected by the operation of demons, it is not real but a mere semblance of reality.

Now this may happen in two ways. Firstly, from within; in this way a demon can work on man’s imagination and even on his corporeal senses, so that something seems otherwise that it is, as explained above (q. 111, Aa. 3,4). It is said indeed that this can be done sometimes by the power of certain bodies. Secondly, from without: for just as he can from the air form a body of any form and shape, and assume it so as to appear in it visibly: so, in the same way he can clothe any corporeal thing with any corporeal form, so as to appear therein. This is what Augustine says (De Civ. Dei xviii, 18): “Man’s imagination, which whether thinking or dreaming, takes the forms of an innumerable number of things, appears to other men’s senses, as it were embodied in the semblance of some animal.” This not to be understood as though the imagination itself or the images formed therein were identified with that which appears embodied to the senses of another man: but that the demon, who forms an image in a man’s imagination, can offer the same picture to another man’s senses.

Reply to Objection 3. As Augustine says (QQ. 83, qu. 79): “When magicians do what holy men do, they do it for a different end and by a different right. The former do it for their own glory; the latter, for the glory of God: the former, by certain private compacts; the latter by the evident assistance and command of God, to Whom every creature is subject.”

* Lib. xxi, Sent. sent 4, among the supposititious works of St. Augustine

Objection 1. It would seem that a demon who is overcome by a man, is not for that reason hindered from any further assault. For Christ overcame the tempter most effectively. Yet afterwards the demon assailed Him by instigating the Jews to kill Him. Therefore it is not true that the devil when conquered ceases his assaults.

Objection 2. Further, to inflict punishment on one who has been worsted in a fight, is to incite him to a sharper attack. But this is not befitting God's mercy. Therefore the conquered demons are not prevented from further assaults.

On the contrary, It is written (Mat. 4:11): "Then the devil left Him," i.e. Christ Who overcame.

I answer that, Some say that when once a demon has been overcome he can no more tempt any man at all, neither to the same nor to any other sin. And others say that he can tempt others, but not the same man. This

seems more probable as long as we understand it to be so for a certain definite time: wherefore (Lk. 4:13) it is written: "All temptation being ended, the devil departed from Him for a time." There are two reasons for this. One is on the part of God's clemency; for as Chrysostom says (Super Matt. Hom. v)*, "the devil does not tempt man for just as long as he likes, but for as long as God allows; for although He allows him to tempt for a short time, He orders him off on account of our weakness." The other reason is taken from the astuteness of the devil. As to this, Ambrose says on Lk. 4:13: "The devil is afraid of persisting, because he shrinks from frequent defeat." That the devil does nevertheless sometimes return to the assault, is apparent from Mat. 12:44: "I will return into my house from whence I came out."

From what has been said, the objections can easily be solved.

* In the *Opus Imperfectum*, among his supposititious works

FIRST PART, QUESTION 115
Of the Action of the Corporeal Creature
(In Six Articles)

We have now to consider the action of the corporeal creature; and fate, which is ascribed to certain bodies. Concerning corporeal actions there are six points of inquiry:

- (1) Whether a body can be active?
- (2) Whether there exist in bodies certain seminal virtues?
- (3) Whether the heavenly bodies are the causes of what is done here by the inferior bodies?
- (4) Whether they are the cause of human acts?
- (5) Whether demons are subject to their influence?
- (6) Whether the heavenly bodies impose necessity on those things which are subject to their influence?

Whether a body can be active?

Ia q. 115 a. 1

Objection 1. It would seem that no bodies are active. For Augustine says (De Civ. Dei v, 9): "There are things that are acted upon, but do not act; such are bodies: there is one Who acts but is not acted upon; this is God: there are things that both act and are acted upon; these are the spiritual substances."

Objection 2. Further, every agent except the first agent requires in its work a subject susceptible of its action. But there is not substance below the corporeal substance which can be susceptible of the latter's action; since it belongs to the lowest degree of beings. Therefore corporeal substance is not active.

Objection 3. Further, every corporeal substance is limited by quantity. But quantity hinders substance from movement and action, because it surrounds it and penetrates it: just as a cloud hinders the air from receiving light. A proof of this is that the more a body increases in quantity, the heavier it is and the more difficult to move. Therefore no corporeal substance is active.

Objection 4. Further, the power of action in every agent is according to its propinquity to the first active cause. But bodies, being most composite, are most remote from the first active cause, which is most simple. Therefore no bodies are active.

Objection 5. Further, if a body is an agent, the term of its action is either a substantial, or an accidental form. But it is not a substantial form; for it is not possible to find in a body any principle of action, save an active quality, which is an accident; and an accident cannot be the cause of a substantial form, since the cause is always more excellent than the effect. Likewise, neither is it an accidental form, for "an accident does not extend beyond its subject," as Augustine says (De Trin. ix, 4). Therefore no bodies are active.

On the contrary, Dionysius says (Coel. Hier. xv) that among other qualities of corporeal fire, "it shows its greatness in its action and power on that of which it lays hold."

I answer that, It is apparent to the senses that some

bodies are active. But concerning the action of bodies there have been three errors. For some denied all action to bodies. This is the opinion of Avicenna in his book on The Fount of Life, where, by the arguments mentioned above, he endeavors to prove that no bodies act, but that all the actions which seem to be the actions of bodies, are the actions of some spiritual power that penetrates all bodies: so that, according to him, it is not fire that heats, but a spiritual power which penetrates, by means of the fire. And this opinion seems to be derived from that of Plato. For Plato held that all forms existing in corporeal matter are participated thereby, and determined and limited thereto; and that separate forms are absolute and as it were universal; wherefore he said that these separate forms are the causes of forms that exist in matter. Therefore inasmuch as the form which is in corporeal matter is determined to this matter individualized by quantity, Avicenna held that the corporeal form is held back and imprisoned by quantity, as the principle of individuality, so as to be unable by action to extend to any other matter: and that the spiritual and immaterial form alone, which is not hedged in by quantity, can issue forth by acting on something else.

But this does not prove that the corporeal form is not an agent, but that it is not a universal agent. For in proportion as a thing is participated, so, of necessity, must that be participated which is proper thereto; thus in proportion to the participation of light is the participation of visibility. But to act, which is nothing else than to make something to be in act, is essentially proper to an act as such; wherefore every agent produces its like. So therefore to the fact of its being a form not determined by matter subject to quantity, a thing owes its being an agent indeterminate and universal: but to the fact that it is determined to this matter, it owes its being an agent limited and particular. Wherefore if the form of fire were separate, as the Platonists supposed, it would be, in a fashion, the cause of every ignition. But this form of fire which is in this corporeal matter, is the cause of this ignition which passes from this body

to that. Hence such an action is effected by the contact of two bodies.

But this opinion of Avicenna goes further than that of Plato. For Plato held only substantial forms to be separate; while he referred accidents to the material principles which are “the great” and “the small,” which he considered to be the first contraries, by others considered to the “the rare” and “the dense.” Consequently both Plato and Avicenna, who follows him to a certain extent, held that corporeal agents act through their accidental forms, by disposing matter for the substantial form; but that the ultimate perfection attained by the introduction of the substantial form is due to an immaterial principle. And this is the second opinion concerning the action of bodies; of which we have spoken above when treating of the creation (q. 45, a. 8).

The third opinion is that of Democritus, who held that action takes place through the issue of atoms from the corporeal agent, while passion consists in the reception of the atoms in the pores of the passive body. This opinion is disproved by Aristotle (De Gener. i, 8,9). For it would follow that a body would not be passive as a whole, and the quantity of the active body would be diminished through its action; which things are manifestly untrue.

We must therefore say that a body acts inasmuch as it is in act, on a body inasmuch as it is in potentiality.

Reply to Objection 1. This passage of Augustine is to be understood of the whole corporeal nature considered as a whole, while thus has no nature inferior to it, on which it can act; as the spiritual nature acts on the corporeal, and the uncreated nature on the created. Nevertheless one body is inferior to another, inasmuch as it is in potentiality to that which the other has in act.

From this follows the solution of the second objection. But it must be observed, when Avicenna argues thus, “There is a mover who is not moved, to wit, the

first maker of all; therefore, on the other hand, there exists something moved which is purely passive,” that this is to be conceded. But this latter is primary matter, which is a pure potentiality, just as God is pure act. Now a body is composed of potentiality and act; and therefore it is both active and passive.

Reply to Objection 3. Quantity does not entirely hinder the corporeal form from action, as stated above; but from being a universal agent, inasmuch as a form is individualized through being in matter subject to quantity. The proof taken from the weight of bodies is not to the purpose. First, because addition of quantity does not cause weight; as is proved (De Coelo et Mundo iv, 2). Secondly, it is false that weight retards movement; on the contrary, the heavier a thing, the greater its movement, if we consider the movement proper thereto. Thirdly, because action is not effected by local movement, as Democritus held: but by something being reduced from potentiality to act.

Reply to Objection 4. A body is not that which is most distant from God; for it participates something of a likeness to the Divine Being, inasmuch as it has a form. That which is most distant from God is primary matter; which is in no way active, since it is a pure potentiality.

Reply to Objection 5. The term of a body’s action is both an accidental form and a substantial form. For the active quality, such as heat, although itself an accident, acts nevertheless by virtue of the substantial form, as its instrument: wherefore its action can terminate in a substantial form; thus natural heat, as the instrument of the soul, has an action terminating in the generation of flesh. But by its own virtue it produces an accident. Nor is it against the nature of an accident to surpass its subject in acting, but it is to surpass it in being; unless indeed one were to imagine that an accident transfers its identical self from the agent to the patient; thus Democritus explained action by an issue of atoms.

Whether there are any seminal virtues in corporeal matter?

Ia q. 115 a. 2

Objection 1. It would seem that there are no seminal virtues in corporeal matter. For virtue [ratio] implies something of a spiritual order. But in corporeal matter nothing exists spiritually, but only materially, that is, according to the mode of that in which it is. Therefore there are no seminal virtues in corporeal matter.

Objection 2. Further, Augustine (De Trin. iii, 8,9) says that demons produce certain results by employing with a hidden movement certain seeds, which they know to exist in matter. But bodies, not virtues, can be employed with local movement. Therefore it is unreasonable to say that there are seminal virtues in corporeal matter.

Objection 3. Further, seeds are active principles. But there are no active principles in corporeal matter; since, as we have said above, matter is not competent to act (a. 1, ad 2,4). Therefore there are no seminal virtues

in corporeal matter.

Objection 4. Further, there are said to be certain “causal virtues” (Augustine, De Gen. ad lit. v, 4) which seem to suffice for the production of things. But seminal virtues are not causal virtues: for miracles are outside the scope of seminal virtues, but not of causal virtues. Therefore it is unreasonable to say that there are seminal virtues in corporeal matter.

On the contrary, Augustine says (De Trin. iii, 8): “Of all the things which are generated in a corporeal and visible fashion, certain seeds lie hidden in the corporeal things of this world.”

I answer that, It is customary to name things after what is more perfect, as the Philosopher says (De Anima ii, 4). Now in the whole corporeal nature, living bodies are the most perfect: wherefore the word “nature” has been transferred from living things to all natu-

ral things. For the word itself, “nature,” as the Philosopher says (Metaph. v, Did. iv, 4), was first applied to signify the generation of living things, which is called “nativity”: and because living things are generated from a principle united to them, as fruit from a tree, and the offspring from the mother, to whom it is united, consequently the word “nature” has been applied to every principle of movement existing in that which is moved. Now it is manifest that the active and passive principles of the generation of living things are the seeds from which living things are generated. Therefore Augustine fittingly gave the name of “seminal virtues” [seminales rationes] to all those active and passive virtues which are the principles of natural generation and movement.

These active and passive virtues may be considered in several orders. For in the first place, as Augustine says (Gen. ad lit. vi, 10), they are principally and originally in the Word of God, as “typal ideas.” Secondly, they are in the elements of the world, where they were produced altogether at the beginning, as in “universal causes.” Thirdly, they are in those things which, in the succession of time, are produced by universal causes, for instance in this plant, and in that animal, as in “particular causes.” Fourthly, they are in the “seeds” produced from animals and plants. And these again are compared to further particular effects, as the primordial universal causes to the first effects produced.

Reply to Objection 1. These active and passive virtues of natural things, though not called “virtues” [rationes] by reason of their being in corporeal matter, can nevertheless be so called in respect of their origin,

forasmuch as they are the effect of the typal ideas [rationes ideales].

Reply to Objection 2. These active and passive virtues are in certain parts of corporeal things: and when they are employed with local movement for the production of certain results, we speak of the demons as employing seeds.

Reply to Objection 3. The seed of the male is the active principle in the generation of an animal. But that can be called seed also which the female contributes as the passive principle. And thus the word “seed” covers both active and passive principles.

Reply to Objection 4. From the words of Augustine when speaking of these seminal virtues, it is easy to gather that they are also causal virtues, just as seed is a kind of cause: for he says (De Trin. iii, 9) that, “as a mother is pregnant with the unborn offspring, so is the world itself pregnant with the causes of unborn things.” Nevertheless, the “typal ideas” can be called “causal virtues,” but not, strictly speaking, “seminal virtues,” because seed is not a separate principle; and because miracles are not wrought outside the scope of causal virtues. Likewise neither are miracles wrought outside the scope of the passive virtues so implanted in the creature, that the latter can be used to any purpose that God commands. But miracles are said to be wrought outside the scope of the natural active virtues, and the passive potentialities which are ordered to such active virtues, and this is what is meant when we say that they are wrought outside the scope of seminal virtues.

Whether the heavenly bodies are the cause of what is produced in bodies here below?

Ia q. 115 a. 3

Objection 1. It would seem that the heavenly bodies are not the cause of what is produced in bodies here below. For Damascene says (De Fide Orth. ii, 7): “We say that they”—namely, the heavenly bodies—“are not the cause of generation or corruption: they are rather signs of storms and atmospheric changes.”

Objection 2. Further, for the production of anything, an agent and matter suffice. But in things here below there is passive matter; and there are contrary agents—heat and cold, and the like. Therefore for the production of things here below, there is no need to ascribe causality to the heavenly bodies.

Objection 3. Further, the agent produces its like. Now it is to be observed that everything which is produced here below is produced through the action of heat and cold, moisture and dryness, and other such qualities, which do not exist in heavenly bodies. Therefore the heavenly bodies are not the cause of what is produced here below.

Objection 4. Further, Augustine says (De Civ. Dei v, 6): “Nothing is more corporeal than sex.” But sex is not caused by the heavenly bodies: a sign of this is that of twins born under the same constellation, one may be

male, the other female. Therefore the heavenly bodies are not the cause of things produced in bodies here below.

On the contrary, Augustine says (De Trin. iii, 4): “Bodies of a grosser and inferior nature are ruled in a certain order by those of a more subtle and powerful nature.” And Dionysius (Div. Nom. iv) says that “the light of the sun conduces to the generation of sensible bodies, moves them to life, gives them nourishment, growth, and perfection.”

I answer that, Since every multitude proceeds from unity; and since what is immovable is always in the same way of being, whereas what is moved has many ways of being: it must be observed that throughout the whole of nature, all movement proceeds from the immovable. Therefore the more immovable certain things are, the more are they the cause of those things which are most movable. Now the heavenly bodies are of all bodies the most immovable, for they are not moved save locally. Therefore the movements of bodies here below, which are various and multiform, must be referred to the movement of the heavenly bodies, as to their cause.

Reply to Objection 1. These words of Damascene

are to be understood as denying that the heavenly bodies are the first cause of generation and corruption here below; for this was affirmed by those who held that the heavenly bodies are gods.

Reply to Objection 2. The active principles of bodies here below are only the active qualities of the elements, such as hot and cold and the like. If therefore the substantial forms of inferior bodies were not diversified save according to accidents of that kind, the principles of which the early natural philosophers held to be the “rare” and the “dense”; there would be no need to suppose some principle above these inferior bodies, for they would be of themselves sufficient to act. But to anyone who considers the matter aright, it is clear that those accidents are merely material dispositions in regard to the substantial forms of natural bodies. Now matter is not of itself sufficient to act. And therefore it is necessary to suppose some active principle above these material dispositions.

This is why the Platonists maintained the existence of separate species, by participation of which the inferior bodies receive their substantial forms. But this does not seem enough. For the separate species, since they are supposed to be immovable, would always have the same mode of being: and consequently there would be no variety in the generation and corruption of inferior

bodies: which is clearly false.

Therefore it is necessary, as the Philosopher says (De Gener. ii, 10), to suppose a movable principle, which by reason of its presence or absence causes variety in the generation and corruption of inferior bodies. Such are the heavenly bodies. Consequently whatever generates here below, moves to the production of the species, as the instrument of a heavenly body: thus the Philosopher says (Phys. ii, 2) that “man and the sun generate man.”

Reply to Objection 3. The heavenly bodies have not a specific likeness to the bodies here below. Their likeness consists in this, that by reason of their universal power, whatever is generated in inferior bodies, is contained in them. In this way also we say that all things are like God.

Reply to Objection 4. The actions of heavenly bodies are variously received in inferior bodies, according to the various dispositions of matter. Now it happens at times that the matter in the human conception is not wholly disposed to the male sex; wherefore it is formed sometimes into a male, sometimes into a female. Augustine quotes this as an argument against divination by stars: because the effects of the stars are varied even in corporeal things, according to the various dispositions of matter.

Whether the heavenly bodies are the cause of human actions?

Ia q. 115 a. 4

Objection 1. It would seem that the heavenly bodies are the cause of human actions. For since the heavenly bodies are moved by spiritual substances, as stated above (q. 110, a. 3), they act by virtue thereof as their instruments. But those spiritual substances are superior to our souls. Therefore it seems that they can cause impressions on our souls, and thereby cause human actions.

Objection 2. Further, every multiform is reducible to a uniform principle. But human actions are various and multiform. Therefore it seems that they are reducible to the uniform movements of heavenly bodies, as to their principles.

Objection 3. Further, astrologers often foretell the truth concerning the outcome of wars, and other human actions, of which the intellect and will are the principles. But they could not do this by means of the heavenly bodies, unless these were the cause of human actions. Therefore the heavenly bodies are the cause of human actions.

On the contrary, Damascene says (De Fide Orth. ii, 7) that “the heavenly bodies are by no means the cause of human actions.”

I answer that, The heavenly bodies can directly and of themselves act on bodies, as stated above (a. 3). They can act directly indeed on those powers of the soul which are the acts of corporeal organs, but accidentally: because the acts of such powers must needs be hindered

by obstacles in the organs; thus an eye when disturbed cannot see well. Wherefore if the intellect and will were powers affixed to corporeal organs, as some maintained, holding that intellect does not differ from sense; it would follow of necessity that the heavenly bodies are the cause of human choice and action. It would also follow that man is led by natural instinct to his actions, just as other animals, in which there are powers other than those which are affixed to corporeal organs: for whatever is done here below in virtue of the action of heavenly bodies, is done naturally. It would therefore follow that man has no free-will, and that he would have determinate actions, like other natural things. All of which is manifestly false, and contrary to human habit. It must be observed, however, that indirectly and accidentally, the impressions of heavenly bodies can reach the intellect and will, forasmuch, namely, as both intellect and will receive something from the inferior powers which are affixed to corporeal organs. But in this the intellect and will are differently situated. For the intellect, of necessity, receives from the inferior apprehensive powers: wherefore if the imaginative, cogitative, or memorative powers be disturbed, the action of the intellect is, of necessity, disturbed also. The will, on the contrary, does not, of necessity, follow the inclination of the inferior appetite; for although the passions in the irascible and concupiscible have a certain force in inclining the will; nevertheless the will retains the power of following the

passions or repressing them. Therefore the impressions of the heavenly bodies, by virtue of which the inferior powers can be changed, has less influence on the will, which is the proximate cause of human actions, than on the intellect.

To maintain therefore that heavenly bodies are the cause of human actions is proper to those who hold that intellect does not differ from sense. Wherefore some of these said that “such is the will of men, as is the day which the father of men and of gods brings on” (Odyssey xviii 135). Since, therefore, it is manifest that intellect and will are not acts of corporeal organs, it is impossible that heavenly bodies be the cause of human actions.

Reply to Objection 1. The spiritual substances, that move the heavenly bodies, do indeed act on corporeal things by means of the heavenly bodies; but they act immediately on the human intellect by enlightening it. On the other hand, they cannot compel the will, as stated

above (q. 111, a. 2).

Reply to Objection 2. Just as the multiformity of corporeal movements is reducible to the uniformity of the heavenly movement as to its cause: so the multiformity of actions proceeding from the intellect and the will is reduced to a uniform principle which is the Divine intellect and will.

Reply to Objection 3. The majority of men follow their passions, which are movements of the sensitive appetite, in which movements of the heavenly bodies can cooperate: but few are wise enough to resist these passions. Consequently astrologers are able to foretell the truth in the majority of cases, especially in a general way. But not in particular cases; for nothing prevents man resisting his passions by his free-will. Wherefore the astrologers themselves are wont to say that “the wise man is stronger than the stars”*, forasmuch as, to wit, he conquers his passions.

Whether heavenly bodies can act on the demons?

Ia q. 115 a. 5

Objection 1. It would seem that heavenly bodies can act on the demons. For the demons, according to certain phases of the moon, can harass men, who on that account are called lunatics, as appears from Mat. 4:24 and 17:14. But this would not be if they were not subject to the heavenly bodies. Therefore the demons are subject to them.

Objection 2. Further, necromancers observe certain constellations in order to invoke the demons. But these would not be invoked through the heavenly bodies unless they were subject to them. Therefore they are subject to them.

Objection 3. Further, heavenly bodies are more powerful than inferior bodies. But the demons are confined to certain inferior bodies, namely, “herbs, stones, animals, and to certain sounds and words, forms and figures,” as Porphyry says, quoted by Augustine (De Civ. Dei x, 11). Much more therefore are the demons subject to the action of heavenly bodies.

On the contrary, The demons are superior in the order of nature, to the heavenly bodies. But the “agent is superior to the patient,” as Augustine says (Gen. ad lit. xii, 16). Therefore the demons are not subject to the action of heavenly bodies.

I answer that, There have been three opinions about the demons. In the first place the Peripatetics denied the existence of demons; and held that what is ascribed to the demons, according to the necromantic art, is effected by the power of the heavenly bodies. This is what Augustine (De Civ. Dei x, 11) relates as having been held by Porphyry, namely, that “on earth men fabricate certain powers useful in producing certain effects of the stars.” But this opinion is manifestly false. For we know by experience that many things are done by

demons, for which the power of heavenly bodies would in no way suffice: for instance, that a man in a state of delirium should speak an unknown tongue, recite poetry and authors of whom he has no previous knowledge; that necromancers make statues to speak and move, and other like things.

For this reason the Platonists were led to hold that demons are “animals with an aerial body and a passive soul,” as Apuleius says, quoted by Augustine (De Civ. Dei viii, 16). And this is the second of the opinions mentioned above: according to which it could be said that demons are subject to heavenly bodies in the same way as we have said man is subject thereto (a. 4). But this opinion is proved to be false from what we have said above (q. 51, a. 1): for we hold that demons are spiritual substances not united to bodies. Hence it is clear that they are subject to the action of heavenly bodies neither essentially nor accidentally, neither directly nor indirectly.

Reply to Objection 1. That demons harass men, according to certain phases of the moon, happens in two ways. Firstly, they do so in order to “defame God’s creature,” namely, the moon; as Jerome (In Matt. iv, 24) and Chrysostom (Hom. lvii in Matt.) say. Secondly, because as they are unable to effect anything save by means of the natural forces, as stated above (q. 114, a. 4, ad 2) they take into account the aptitude of bodies for the intended result. Now it is manifest that “the brain is the most moist of all the parts of the body,” as Aristotle says[†]: wherefore it is the most subject to the action of the moon, the property of which is to move what is moist. And it is precisely in the brain that animal forces culminate: wherefore the demons, according to certain phases of the moon, disturb man’s imagination, when

* Ptolemy, Centiloquium, prop. 5 † De Part. Animal. ii, 7: De Sens. et Sensato ii: De Somn. et Vigil. iii

they observe that the brain is thereto disposed.

Reply to Objection 2. Demons when summoned through certain constellations, come for two reasons. Firstly, in order to lead man into the error of believing that there is some Divine power in the stars. Secondly, because they consider that under certain constellations corporeal matter is better disposed for the result for which they are summoned.

Reply to Objection 3. As Augustine says (*De Civ. Dei* xxi, 6), the “demons are enticed through various kinds of stones, herbs, trees, animals, songs, rites, not as an animal is enticed by food, but as a spirit by signs”; that is to say, forasmuch as these things are offered to them in token of the honor due to God, of which they are covetous.

Whether heavenly bodies impose necessity on things subject to their action?

Ia q. 115 a. 6

Objection 1. It would seem that heavenly bodies impose necessity on things subject to their action. For given a sufficient cause, the effect follows of necessity. But heavenly bodies are a sufficient cause of their effects. Since, therefore, heavenly bodies, with their movements and dispositions, are necessary beings; it seems that their effects follow of necessity.

Objection 2. Further, an agent's effect results of necessity in matter, when the power of the agent is such that it can subject the matter to itself entirely. But the entire matter of inferior bodies is subject to the power of heavenly bodies, since this is a higher power than theirs. Therefore the effect of the heavenly bodies is of necessity received in corporeal matter.

Objection 3. Further, if the effect of the heavenly body does not follow of necessity, this is due to some hindering cause. But any corporeal cause, that might possibly hinder the effect of a heavenly body, must of necessity be reducible to some heavenly principle: since the heavenly bodies are the causes of all that takes place here below. Therefore, since also that heavenly principle is necessary, it follows that the effect of the heavenly body is necessarily hindered. Consequently it would follow that all that takes place here below happens of necessity.

On the contrary, The Philosopher says (*De Somn. et Vigil.* *): “It is not incongruous that many of the signs observed in bodies, of occurrences in the heavens, such as rain and wind, should not be fulfilled.” Therefore not all the effects of heavenly bodies take place of necessity.

I answer that, This question is partly solved by what was said above (a. 4); and in part presents some difficulty. For it was shown that although the action of heavenly bodies produces certain inclinations in corporeal nature, the will nevertheless does not of necessity follow these inclinations. Therefore there is nothing to prevent the effect of heavenly bodies being hindered by the action of the will, not only in man himself, but also in other things to which human action extends.

But in natural things there is no such principle, endowed with freedom to follow or not to follow the impressions produced by heavenly agents. Wherefore it seems that in such things at least, everything happens of necessity; according to the reasoning of some of the ancients who supposing that everything that is, has a

cause; and that, given the cause, the effect follows of necessity; concluded that all things happen of necessity. This opinion is refuted by Aristotle (*Metaph.* vi, *Did.* v, 3) as to this double supposition.

For in the first place it is not true that, given any cause whatever, the effect must follow of necessity. For some causes are so ordered to their effects, as to produce them, not of necessity, but in the majority of cases, and in the minority to fail in producing them. But that such cases do fail in the minority of cases is due to some hindering cause; consequently the above-mentioned difficulty seems not to be avoided, since the cause in question is hindered of necessity.

Therefore we must say, in the second place, that everything that is a being “per se,” has a cause; but what is accidentally, has not a cause, because it is not truly a being, since it is not truly one. For (that a thing is) “white” has a cause, likewise (that a man is) “musical” has not a cause, but (that a being is) “white-musical” has not a cause, because it is not truly a being, nor truly one. Now it is manifest that a cause which hinders the action of a cause so ordered to its effect as to produce it in the majority of cases, clashes sometimes with this cause by accident: and the clashing of these two causes, inasmuch as it is accidental, has no cause. Consequently what results from this clashing of causes is not to be reduced to a further pre-existing cause, from which it follows of necessity. For instance, that some terrestrial body take fire in the higher regions of the air and fall to the earth, is caused by some heavenly power: again, that there be on the surface of the earth some combustible matter, is reducible to some heavenly principle. But that the burning body should alight on this matter and set fire to it, is not caused by a heavenly body, but is accidental. Consequently not all the effects of heavenly bodies result of necessity.

Reply to Objection 1. The heavenly bodies are causes of effects that take place here below, through the means of particular inferior causes, which can fail in their effects in the minority of cases.

Reply to Objection 2. The power of a heavenly body is not infinite. Wherefore it requires a determinate disposition in matter, both as to local distance and as to other conditions, in order to produce its effect. Therefore as local distance hinders the effect of a heavenly

* *De Divin. per Somn.* ii

body (for the sun has not the same effect in heat in Dacia as in Ethiopia); so the grossness of matter, its low or high temperature or other such disposition, can hinder the effect of a heavenly body.

Reply to Objection 3. Although the cause that hin-

ders the effect of another cause can be reduced to a heavenly body as its cause; nevertheless the clashing of two causes, being accidental, is not reduced to the causality of a heavenly body, as stated above.

Objection 1. It would seem that no bodies are active. For Augustine says (*De Civ. Dei* v, 9): “There are things that are acted upon, but do not act; such are bodies: there is one Who acts but is not acted upon; this is God: there are things that both act and are acted upon; these are the spiritual substances.”

Objection 2. Further, every agent except the first agent requires in its work a subject susceptible of its action. But there is not substance below the corporeal substance which can be susceptible of the latter’s action; since it belongs to the lowest degree of beings. Therefore corporeal substance is not active.

Objection 3. Further, every corporeal substance is limited by quantity. But quantity hinders substance from movement and action, because it surrounds it and penetrates it: just as a cloud hinders the air from receiving light. A proof of this is that the more a body increases in quantity, the heavier it is and the more difficult to move. Therefore no corporeal substance is active.

Objection 4. Further, the power of action in every agent is according to its propinquity to the first active cause. But bodies, being most composite, are most remote from the first active cause, which is most simple. Therefore no bodies are active.

Objection 5. Further, if a body is an agent, the term of its action is either a substantial, or an accidental form. But it is not a substantial form; for it is not possible to find in a body any principle of action, save an active quality, which is an accident; and an accident cannot be the cause of a substantial form, since the cause is always more excellent than the effect. Likewise, neither is it an accidental form, for “an accident does not extend beyond its subject,” as Augustine says (*De Trin.* ix, 4). Therefore no bodies are active.

On the contrary, Dionysius says (*Coel. Hier.* xv) that among other qualities of corporeal fire, “it shows its greatness in its action and power on that of which it lays hold.”

I answer that, It is apparent to the senses that some bodies are active. But concerning the action of bodies there have been three errors. For some denied all action to bodies. This is the opinion of Avicenna in his book on *The Fount of Life*, where, by the arguments mentioned above, he endeavors to prove that no bodies act, but that all the actions which seem to be the actions of bodies, are the actions of some spiritual power that penetrates all bodies: so that, according to him, it is not fire that heats, but a spiritual power which penetrates, by means of the fire. And this opinion seems to be derived from that of Plato. For Plato held that all forms existing in corporeal matter are participated thereby, and determined and limited thereto; and that separate forms are absolute and as it were universal; wherefore he said that these separate forms are the causes of forms that exist in matter. Therefore inasmuch as the form which is in

corporeal matter is determined to this matter individualized by quantity, Avicenna held that the corporeal form is held back and imprisoned by quantity, as the principle of individuality, so as to be unable by action to extend to any other matter: and that the spiritual and immaterial form alone, which is not hedged in by quantity, can issue forth by acting on something else.

But this does not prove that the corporeal form is not an agent, but that it is not a universal agent. For in proportion as a thing is participated, so, of necessity, must that be participated which is proper thereto; thus in proportion to the participation of light is the participation of visibility. But to act, which is nothing else than to make something to be in act, is essentially proper to an act as such; wherefore every agent produces its like. So therefore to the fact of its being a form not determined by matter subject to quantity, a thing owes its being an agent indeterminate and universal: but to the fact that it is determined to this matter, it owes its being an agent limited and particular. Wherefore if the form of fire were separate, as the Platonists supposed, it would be, in a fashion, the cause of every ignition. But this form of fire which is in this corporeal matter, is the cause of this ignition which passes from this body to that. Hence such an action is effected by the contact of two bodies.

But this opinion of Avicenna goes further than that of Plato. For Plato held only substantial forms to be separate; while he referred accidents to the material principles which are “the great” and “the small,” which he considered to be the first contraries, by others considered to the “the rare” and “the dense.” Consequently both Plato and Avicenna, who follows him to a certain extent, held that corporeal agents act through their accidental forms, by disposing matter for the substantial form; but that the ultimate perfection attained by the introduction of the substantial form is due to an immaterial principle. And this is the second opinion concerning the action of bodies; of which we have spoken above when treating of the creation (q. 45, a. 8).

The third opinion is that of Democritus, who held that action takes place through the issue of atoms from the corporeal agent, while passion consists in the reception of the atoms in the pores of the passive body. This opinion is disproved by Aristotle (*De Gener.* i, 8,9). For it would follow that a body would not be passive as a whole, and the quantity of the active body would be diminished through its action; which things are manifestly untrue.

We must therefore say that a body acts forasmuch as it is in act, on a body forasmuch as it is in potentiality.

Reply to Objection 1. This passage of Augustine is to be understood of the whole corporeal nature considered as a whole, while thus has no nature inferior to it, on which it can act; as the spiritual nature acts on the corporeal, and the uncreated nature on the created.

Nevertheless one body is inferior to another, forasmuch as it is in potentiality to that which the other has in act.

From this follows the solution of the second objection. But it must be observed, when Avicbron argues thus, "There is a mover who is not moved, to wit, the first maker of all; therefore, on the other hand, there exists something moved which is purely passive," that this is to be conceded. But this latter is primary matter, which is a pure potentiality, just as God is pure act. Now a body is composed of potentiality and act; and therefore it is both active and passive.

Reply to Objection 3. Quantity does not entirely hinder the corporeal form from action, as stated above; but from being a universal agent, forasmuch as a form is individualized through being in matter subject to quantity. The proof taken from the weight of bodies is not to the purpose. First, because addition of quantity does not cause weight; as is proved (*De Coelo et Mundo* iv, 2). Secondly, it is false that weight retards movement; on the contrary, the heavier a thing, the greater its movement, if we consider the movement proper thereto.

Thirdly, because action is not effected by local movement, as Democritus held: but by something being reduced from potentiality to act.

Reply to Objection 4. A body is not that which is most distant from God; for it participates something of a likeness to the Divine Being, forasmuch as it has a form. That which is most distant from God is primary matter; which is in no way active, since it is a pure potentiality.

Reply to Objection 5. The term of a body's action is both an accidental form and a substantial form. For the active quality, such as heat, although itself an accident, acts nevertheless by virtue of the substantial form, as its instrument: wherefore its action can terminate in a substantial form; thus natural heat, as the instrument of the soul, has an action terminating in the generation of flesh. But by its own virtue it produces an accident. Nor is it against the nature of an accident to surpass its subject in acting, but it is to surpass it in being; unless indeed one were to imagine that an accident transfers its identical self from the agent to the patient; thus Democritus explained action by an issue of atoms.

Objection 1. It would seem that there are no seminal virtues in corporeal matter. For virtue [ratio] implies something of a spiritual order. But in corporeal matter nothing exists spiritually, but only materially, that is, according to the mode of that in which it is. Therefore there are no seminal virtues in corporeal matter.

Objection 2. Further, Augustine (De Trin. iii, 8,9) says that demons produce certain results by employing with a hidden movement certain seeds, which they know to exist in matter. But bodies, not virtues, can be employed with local movement. Therefore it is unreasonable to say that there are seminal virtues in corporeal matter.

Objection 3. Further, seeds are active principles. But there are no active principles in corporeal matter; since, as we have said above, matter is not competent to act (a. 1, ad 2,4). Therefore there are no seminal virtues in corporeal matter.

Objection 4. Further, there are said to be certain “causal virtues” (Augustine, De Gen. ad lit. v, 4) which seem to suffice for the production of things. But seminal virtues are not causal virtues: for miracles are outside the scope of seminal virtues, but not of causal virtues. Therefore it is unreasonable to say that there are seminal virtues in corporeal matter.

On the contrary, Augustine says (De Trin. iii, 8): “Of all the things which are generated in a corporeal and visible fashion, certain seeds lie hidden in the corporeal things of this world.”

I answer that, It is customary to name things after what is more perfect, as the Philosopher says (De Anima ii, 4). Now in the whole corporeal nature, living bodies are the most perfect: wherefore the word “nature” has been transferred from living things to all natural things. For the word itself, “nature,” as the Philosopher says (Metaph. v, Did. iv, 4), was first applied to signify the generation of living things, which is called “nativity”: and because living things are generated from a principle united to them, as fruit from a tree, and the offspring from the mother, to whom it is united, consequently the word “nature” has been applied to every principle of movement existing in that which is moved. Now it is manifest that the active and passive principles of the generation of living things are the seeds from which living things are generated. Therefore Augustine fittingly gave the name of “seminal virtues” [seminales rationes] to all those active and passive virtues which are the principles of natural generation and movement.

These active and passive virtues may be considered in several orders. For in the first place, as Augustine says (Gen. ad lit. vi, 10), they are principally and originally in the Word of God, as “typal ideas.” Secondly, they are in the elements of the world, where they were produced altogether at the beginning, as in “universal causes.” Thirdly, they are in those things which, in the succession of time, are produced by universal causes, for instance in this plant, and in that animal, as in “particular causes.” Fourthly, they are in the “seeds” produced from animals and plants. And these again are compared to further particular effects, as the primordial universal causes to the first effects produced.

Reply to Objection 1. These active and passive virtues of natural things, though not called “virtues” [rationes] by reason of their being in corporeal matter, can nevertheless be so called in respect of their origin, forasmuch as they are the effect of the typal ideas [rationes ideales].

Reply to Objection 2. These active and passive virtues are in certain parts of corporeal things: and when they are employed with local movement for the production of certain results, we speak of the demons as employing seeds.

Reply to Objection 3. The seed of the male is the active principle in the generation of an animal. But that can be called seed also which the female contributes as the passive principle. And thus the word “seed” covers both active and passive principles.

Reply to Objection 4. From the words of Augustine when speaking of these seminal virtues, it is easy to gather that they are also causal virtues, just as seed is a kind of cause: for he says (De Trin. iii, 9) that, “as a mother is pregnant with the unborn offspring, so is the world itself pregnant with the causes of unborn things.” Nevertheless, the “typal ideas” can be called “causal virtues,” but not, strictly speaking, “seminal virtues,” because seed is not a separate principle; and because miracles are not wrought outside the scope of causal virtues. Likewise neither are miracles wrought outside the scope of the passive virtues so implanted in the creature, that the latter can be used to any purpose that God commands. But miracles are said to be wrought outside the scope of the natural active virtues, and the passive potentialities which are ordered to such active virtues, and this is what is meant when we say that they are wrought outside the scope of seminal virtues.

Objection 1. It would seem that the heavenly bodies are not the cause of what is produced in bodies here below. For Damascene says (*De Fide Orth.* ii, 7): “We say that they”—namely, the heavenly bodies—“are not the cause of generation or corruption: they are rather signs of storms and atmospheric changes.”

Objection 2. Further, for the production of anything, an agent and matter suffice. But in things here below there is passive matter; and there are contrary agents—heat and cold, and the like. Therefore for the production of things here below, there is no need to ascribe causality to the heavenly bodies.

Objection 3. Further, the agent produces its like. Now it is to be observed that everything which is produced here below is produced through the action of heat and cold, moisture and dryness, and other such qualities, which do not exist in heavenly bodies. Therefore the heavenly bodies are not the cause of what is produced here below.

Objection 4. Further, Augustine says (*De Civ. Dei* v, 6): “Nothing is more corporeal than sex.” But sex is not caused by the heavenly bodies: a sign of this is that of twins born under the same constellation, one may be male, the other female. Therefore the heavenly bodies are not the cause of things produced in bodies here below.

On the contrary, Augustine says (*De Trin.* iii, 4): “Bodies of a grosser and inferior nature are ruled in a certain order by those of a more subtle and powerful nature.” And Dionysius (*Div. Nom.* iv) says that “the light of the sun conduces to the generation of sensible bodies, moves them to life, gives them nourishment, growth, and perfection.”

I answer that, Since every multitude proceeds from unity; and since what is immovable is always in the same way of being, whereas what is moved has many ways of being: it must be observed that throughout the whole of nature, all movement proceeds from the immovable. Therefore the more immovable certain things are, the more are they the cause of those things which are most movable. Now the heavenly bodies are of all bodies the most immovable, for they are not moved save locally. Therefore the movements of bodies here below, which are various and multiform, must be referred to the movement of the heavenly bodies, as to their cause.

Reply to Objection 1. These words of Damascene are to be understood as denying that the heavenly bodies are the first cause of generation and corruption here below; for this was affirmed by those who held that the

heavenly bodies are gods.

Reply to Objection 2. The active principles of bodies here below are only the active qualities of the elements, such as hot and cold and the like. If therefore the substantial forms of inferior bodies were not diversified save according to accidents of that kind, the principles of which the early natural philosophers held to be the “rare” and the “dense”; there would be no need to suppose some principle above these inferior bodies, for they would be of themselves sufficient to act. But to anyone who considers the matter aright, it is clear that those accidents are merely material dispositions in regard to the substantial forms of natural bodies. Now matter is not of itself sufficient to act. And therefore it is necessary to suppose some active principle above these material dispositions.

This is why the Platonists maintained the existence of separate species, by participation of which the inferior bodies receive their substantial forms. But this does not seem enough. For the separate species, since they are supposed to be immovable, would always have the same mode of being: and consequently there would be no variety in the generation and corruption of inferior bodies: which is clearly false.

Therefore it is necessary, as the Philosopher says (*De Gener.* ii, 10), to suppose a movable principle, which by reason of its presence or absence causes variety in the generation and corruption of inferior bodies. Such are the heavenly bodies. Consequently whatever generates here below, moves to the production of the species, as the instrument of a heavenly body: thus the Philosopher says (*Phys.* ii, 2) that “man and the sun generate man.”

Reply to Objection 3. The heavenly bodies have not a specific likeness to the bodies here below. Their likeness consists in this, that by reason of their universal power, whatever is generated in inferior bodies, is contained in them. In this way also we say that all things are like God.

Reply to Objection 4. The actions of heavenly bodies are variously received in inferior bodies, according to the various dispositions of matter. Now it happens at times that the matter in the human conception is not wholly disposed to the male sex; wherefore it is formed sometimes into a male, sometimes into a female. Augustine quotes this as an argument against divination by stars: because the effects of the stars are varied even in corporeal things, according to the various dispositions of matter.

Objection 1. It would seem that the heavenly bodies are the cause of human actions. For since the heavenly bodies are moved by spiritual substances, as stated above (q. 110, a. 3), they act by virtue thereof as their instruments. But those spiritual substances are superior to our souls. Therefore it seems that they can cause impressions on our souls, and thereby cause human actions.

Objection 2. Further, every multiform is reducible to a uniform principle. But human actions are various and multiform. Therefore it seems that they are reducible to the uniform movements of heavenly bodies, as to their principles.

Objection 3. Further, astrologers often foretell the truth concerning the outcome of wars, and other human actions, of which the intellect and will are the principles. But they could not do this by means of the heavenly bodies, unless these were the cause of human actions. Therefore the heavenly bodies are the cause of human actions.

On the contrary, Damascene says (*De Fide Orth.* ii, 7) that “the heavenly bodies are by no means the cause of human actions.”

I answer that, The heavenly bodies can directly and of themselves act on bodies, as stated above (a. 3). They can act directly indeed on those powers of the soul which are the acts of corporeal organs, but accidentally: because the acts of such powers must needs be hindered by obstacles in the organs; thus an eye when disturbed cannot see well. Wherefore if the intellect and will were powers affixed to corporeal organs, as some maintained, holding that intellect does not differ from sense; it would follow of necessity that the heavenly bodies are the cause of human choice and action. It would also follow that man is led by natural instinct to his actions, just as other animals, in which there are powers other than those which are affixed to corporeal organs: for whatever is done here below in virtue of the action of heavenly bodies, is done naturally. It would therefore follow that man has no free-will, and that he would have determinate actions, like other natural things. All of which is manifestly false, and contrary to human habit. It must be observed, however, that indirectly and accidentally, the impressions of heavenly bodies can reach the intellect and will, forasmuch, namely, as both intellect and will receive something from the inferior powers which are affixed to corporeal organs. But in this the intellect

and will are differently situated. For the intellect, of necessity, receives from the inferior apprehensive powers: wherefore if the imaginative, cogitative, or memorative powers be disturbed, the action of the intellect is, of necessity, disturbed also. The will, on the contrary, does not, of necessity, follow the inclination of the inferior appetite; for although the passions in the irascible and concupiscible have a certain force in inclining the will; nevertheless the will retains the power of following the passions or repressing them. Therefore the impressions of the heavenly bodies, by virtue of which the inferior powers can be changed, has less influence on the will, which is the proximate cause of human actions, than on the intellect.

To maintain therefore that heavenly bodies are the cause of human actions is proper to those who hold that intellect does not differ from sense. Wherefore some of these said that “such is the will of men, as is the day which the father of men and of gods brings on” (*Odyssey* xviii 135). Since, therefore, it is manifest that intellect and will are not acts of corporeal organs, it is impossible that heavenly bodies be the cause of human actions.

Reply to Objection 1. The spiritual substances, that move the heavenly bodies, do indeed act on corporeal things by means of the heavenly bodies; but they act immediately on the human intellect by enlightening it. On the other hand, they cannot compel the will, as stated above (q. 111, a. 2).

Reply to Objection 2. Just as the multiformity of corporeal movements is reducible to the uniformity of the heavenly movement as to its cause: so the multiformity of actions proceeding from the intellect and the will is reduced to a uniform principle which is the Divine intellect and will.

Reply to Objection 3. The majority of men follow their passions, which are movements of the sensitive appetite, in which movements of the heavenly bodies can cooperate: but few are wise enough to resist these passions. Consequently astrologers are able to foretell the truth in the majority of cases, especially in a general way. But not in particular cases; for nothing prevents man resisting his passions by his free-will. Wherefore the astrologers themselves are wont to say that “the wise man is stronger than the stars”*, forasmuch as, to wit, he conquers his passions.

* Ptolemy, *Centiloquium*, prop. 5

Objection 1. It would seem that heavenly bodies can act on the demons. For the demons, according to certain phases of the moon, can harass men, who on that account are called lunatics, as appears from Mat. 4:24 and 17:14. But this would not be if they were not subject to the heavenly bodies. Therefore the demons are subject to them.

Objection 2. Further, necromancers observe certain constellations in order to invoke the demons. But these would not be invoked through the heavenly bodies unless they were subject to them. Therefore they are subject to them.

Objection 3. Further, heavenly bodies are more powerful than inferior bodies. But the demons are confined to certain inferior bodies, namely, “herbs, stones, animals, and to certain sounds and words, forms and figures,” as Porphyry says, quoted by Augustine (De Civ. Dei x, 11). Much more therefore are the demons subject to the action of heavenly bodies.

On the contrary, The demons are superior in the order of nature, to the heavenly bodies. But the “agent is superior to the patient,” as Augustine says (Gen. ad lit. xii, 16). Therefore the demons are not subject to the action of heavenly bodies.

I answer that, There have been three opinions about the demons. In the first place the Peripatetics denied the existence of demons; and held that what is ascribed to the demons, according to the necromantic art, is effected by the power of the heavenly bodies. This is what Augustine (De Civ. Dei x, 11) relates as having been held by Porphyry, namely, that “on earth men fabricate certain powers useful in producing certain effects of the stars.” But this opinion is manifestly false. For we know by experience that many things are done by demons, for which the power of heavenly bodies would in no way suffice: for instance, that a man in a state of delirium should speak an unknown tongue, recite poetry and authors of whom he has no previous knowledge; that necromancers make statues to speak and move, and other like things.

For this reason the Platonists were led to hold that demons are “animals with an aerial body and a passive

soul,” as Apuleius says, quoted by Augustine (De Civ. Dei viii, 16). And this is the second of the opinions mentioned above: according to which it could be said that demons are subject to heavenly bodies in the same way as we have said man is subject thereto (a. 4). But this opinion is proved to be false from what we have said above (q. 51, a. 1): for we hold that demons are spiritual substances not united to bodies. Hence it is clear that they are subject to the action of heavenly bodies neither essentially nor accidentally, neither directly nor indirectly.

Reply to Objection 1. That demons harass men, according to certain phases of the moon, happens in two ways. Firstly, they do so in order to “defame God’s creature,” namely, the moon; as Jerome (In Matt. iv, 24) and Chrysostom (Hom. lvii in Matt.) say. Secondly, because as they are unable to effect anything save by means of the natural forces, as stated above (q. 114, a. 4, ad 2) they take into account the aptitude of bodies for the intended result. Now it is manifest that “the brain is the most moist of all the parts of the body,” as Aristotle says*: wherefore it is the most subject to the action of the moon, the property of which is to move what is moist. And it is precisely in the brain that animal forces culminate: wherefore the demons, according to certain phases of the moon, disturb man’s imagination, when they observe that the brain is thereto disposed.

Reply to Objection 2. Demons when summoned through certain constellations, come for two reasons. Firstly, in order to lead man into the error of believing that there is some Divine power in the stars. Secondly, because they consider that under certain constellations corporeal matter is better disposed for the result for which they are summoned.

Reply to Objection 3. As Augustine says (De Civ. Dei xxi, 6), the “demons are enticed through various kinds of stones, herbs, trees, animals, songs, rites, not as an animal is enticed by food, but as a spirit by signs”; that is to say, forasmuch as these things are offered to them in token of the honor due to God, of which they are covetous.

* De Part. Animal. ii, 7: De Sens. et Sensato ii: De Somn. et Vigil. iii

Objection 1. It would seem that heavenly bodies impose necessity on things subject to their action. For given a sufficient cause, the effect follows of necessity. But heavenly bodies are a sufficient cause of their effects. Since, therefore, heavenly bodies, with their movements and dispositions, are necessary beings; it seems that their effects follow of necessity.

Objection 2. Further, an agent's effect results of necessity in matter, when the power of the agent is such that it can subject the matter to itself entirely. But the entire matter of inferior bodies is subject to the power of heavenly bodies, since this is a higher power than theirs. Therefore the effect of the heavenly bodies is of necessity received in corporeal matter.

Objection 3. Further, if the effect of the heavenly body does not follow of necessity, this is due to some hindering cause. But any corporeal cause, that might possibly hinder the effect of a heavenly body, must of necessity be reducible to some heavenly principle: since the heavenly bodies are the causes of all that takes place here below. Therefore, since also that heavenly principle is necessary, it follows that the effect of the heavenly body is necessarily hindered. Consequently it would follow that all that takes place here below happens of necessity.

On the contrary, The Philosopher says (De Somn. et Vigil.*): "It is not incongruous that many of the signs observed in bodies, of occurrences in the heavens, such as rain and wind, should not be fulfilled." Therefore not all the effects of heavenly bodies take place of necessity.

I answer that, This question is partly solved by what was said above (a. 4); and in part presents some difficulty. For it was shown that although the action of heavenly bodies produces certain inclinations in corporeal nature, the will nevertheless does not of necessity follow these inclinations. Therefore there is nothing to prevent the effect of heavenly bodies being hindered by the action of the will, not only in man himself, but also in other things to which human action extends.

But in natural things there is no such principle, endowed with freedom to follow or not to follow the impressions produced by heavenly agents. Wherefore it seems that in such things at least, everything happens of necessity; according to the reasoning of some of the ancients who supposing that everything that is, has a cause; and that, given the cause, the effect follows of necessity; concluded that all things happen of necessity. This opinion is refuted by Aristotle (Metaph. vi, Did. v, 3) as to this double supposition.

For in the first place it is not true that, given any

cause whatever, the effect must follow of necessity. For some causes are so ordered to their effects, as to produce them, not of necessity, but in the majority of cases, and in the minority to fail in producing them. But that such cases do fail in the minority of cases is due to some hindering cause; consequently the above-mentioned difficulty seems not to be avoided, since the cause in question is hindered of necessity.

Therefore we must say, in the second place, that everything that is a being "per se," has a cause; but what is accidentally, has not a cause, because it is not truly a being, since it is not truly one. For (that a thing is) "white" has a cause, likewise (that a man is) "musical" has not a cause, but (that a being is) "white-musical" has not a cause, because it is not truly a being, nor truly one. Now it is manifest that a cause which hinders the action of a cause so ordered to its effect as to produce it in the majority of cases, clashes sometimes with this cause by accident: and the clashing of these two causes, inasmuch as it is accidental, has no cause. Consequently what results from this clashing of causes is not to be reduced to a further pre-existing cause, from which it follows of necessity. For instance, that some terrestrial body take fire in the higher regions of the air and fall to the earth, is caused by some heavenly power: again, that there be on the surface of the earth some combustible matter, is reducible to some heavenly principle. But that the burning body should alight on this matter and set fire to it, is not caused by a heavenly body, but is accidental. Consequently not all the effects of heavenly bodies result of necessity.

Reply to Objection 1. The heavenly bodies are causes of effects that take place here below, through the means of particular inferior causes, which can fail in their effects in the minority of cases.

Reply to Objection 2. The power of a heavenly body is not infinite. Wherefore it requires a determinate disposition in matter, both as to local distance and as to other conditions, in order to produce its effect. Therefore as local distance hinders the effect of a heavenly body (for the sun has not the same effect in heat in Dacia as in Ethiopia); so the grossness of matter, its low or high temperature or other such disposition, can hinder the effect of a heavenly body.

Reply to Objection 3. Although the cause that hinders the effect of another cause can be reduced to a heavenly body as its cause; nevertheless the clashing of two causes, being accidental, is not reduced to the causality of a heavenly body, as stated above.

* De Divin. per Somn. ii

FIRST PART, QUESTION 116

On Fate (In Four Articles)

We come now to the consideration of fate. Under this head there are four points of inquiry:

- (1) Is there such a thing as fate?
- (2) Where is it?
- (3) Is it unchangeable?
- (4) Are all things subject to fate?

Whether there be such a thing as fate?

Ia q. 116 a. 1

Objection 1. It would seem that fate is nothing. For Gregory says in a homily for the Epiphany (Hom. x in Evang.): “Far be it from the hearts of the faithful to think that fate is anything real.”

Objection 2. Further, what happens by fate is not unforeseen, for as Augustine says (De Civ. Dei v, 4), “fate is understood to be derived from the verb ‘fari’ which means to speak”; as though things were said to happen by fate, which are “fore-spoken” by one who decrees them to happen. Now what is foreseen is neither lucky nor chance-like. If therefore things happen by fate, there will be neither luck nor chance in the world.

On the contrary, What does not exist cannot be defined. But Boethius (De Consol. iv) defines fate thus: “Fate is a disposition inherent to changeable things, by which Providence connects each one with its proper order.”

I answer that, In this world some things seem to happen by luck or chance. Now it happens sometimes that something is lucky or chance-like as compared to inferior causes, which, if compared to some higher cause, is directly intended. For instance, if two servants are sent by their master to the same place; the meeting of the two servants in regard to themselves is by chance; but as compared to the master, who had ordered it, it is directly intended.

So there were some who refused to refer to a higher cause such events which by luck or chance take place here below. These denied the existence of fate and Providence, as Augustine relates of Tully (De Civ. Dei v, 9). And this is contrary to what we have said above about Providence (q. 22, a. 2).

On the other hand, some have considered that everything that takes place here below by luck or by chance, whether in natural things or in human affairs, is to be reduced to a superior cause, namely, the heavenly bodies. According to these fate is nothing else than “a disposition of the stars under which each one is begotten or born”*. But this will not hold. First, as to human affairs: because we have proved above (q. 115, a. 4) that human actions are not subject to the action of heavenly bodies, save accidentally and indirectly. Now the cause of fate, since it has the ordering of things that happen by fate,

must of necessity be directly and of itself the cause of what takes place. Secondly, as to all things that happen accidentally: for it has been said (q. 115, a. 6) that what is accidental, is properly speaking neither a being, nor a unity. But every action of nature terminates in some one thing. Wherefore it is impossible for that which is accidental to be the proper effect of an active natural principle. No natural cause can therefore have for its proper effect that a man intending to dig a grace finds a treasure. Now it is manifest that a heavenly body acts after the manner of a natural principle: wherefore its effects in this world are natural. It is therefore impossible that any active power of a heavenly body be the cause of what happens by accident here below, whether by luck or by chance.

We must therefore say that what happens here by accident, both in natural things and in human affairs, is reduced to a preordaining cause, which is Divine Providence. For nothing hinders that which happens by accident being considered as one by an intellect: otherwise the intellect could not form this proposition: “The digger of a grave found a treasure.” And just as an intellect can apprehend this so can it effect it; for instance, someone who knows a place where a treasure is hidden, might instigate a rustic, ignorant of this, to dig a grave there. Consequently, nothing hinders what happens here by accident, by luck or by chance, being reduced to some ordering cause which acts by the intellect, especially the Divine intellect. For God alone can change the will, as shown above (q. 105, a. 4). Consequently the ordering of human actions, the principle of which is the will, must be ascribed to God alone.

So therefore inasmuch as all that happens here below is subject to Divine Providence, as being preordained, and as it were “fore-spoken,” we can admit the existence of fate: although the holy doctors avoided the use of this word, on account of those who twisted its application to a certain force in the position of the stars. Hence Augustine says (De Civ. Dei v, 1): “If anyone ascribes human affairs to fate, meaning thereby the will or power of God, let him keep to his opinion, but hold his tongue.” For this reason Gregory denies the existence of fate: wherefore the first objection’s solution is

* Cf. St. Augustine De Civ. Dei v, 1,8,9

manifest.

Reply to Objection 2. Nothing hinders certain things happening by luck or by chance, if compared to

their proximate causes: but not if compared to Divine Providence, whereby “nothing happens at random in the world,” as Augustine says (QQ. 83, qu. 24).

Whether fate is in created things?

Ia q. 116 a. 2

Objection 1. It would seem that fate is not in created things. For Augustine says (De Civ. Dei v, 1) that the “Divine will or power is called fate.” But the Divine will or power is not in creatures, but in God. Therefore fate is not in creatures but in God.

Objection 2. Further, fate is compared to things that happen by fate, as their cause; as the very use of the word proves. But the universal cause that of itself effects what takes place by accident here below, is God alone, as stated above (a. 1). Therefore fate is in God, and not in creatures.

Objection 3. Further, if fate is in creatures, it is either a substance or an accident: and whichever it is it must be multiplied according to the number of creatures. Since, therefore, fate seems to be one thing only, it seems that fate is not in creatures, but in God.

On the contrary, Boethius says (De Consol. iv): “Fate is a disposition inherent to changeable things.”

I answer that, As is clear from what has been stated above (q. 22, a. 3; q. 103, a. 6), Divine Providence produces effects through mediate causes. We can therefore consider the ordering of the effects in two ways. Firstly, as being in God Himself: and thus the ordering of the effects is called Providence. But if we consider this ordering as being in the mediate causes ordered by God to the production of certain effects, thus it has the nature of fate. This is what Boethius says (De Consol. iv): “Fate is worked out when Divine Providence is served

by certain spirits; whether by the soul, or by all nature itself which obeys Him, whether by the heavenly movements of the stars, whether by the angelic power, or by the ingenuity of the demons, whether by some of these, or by all, the chain of fate is forged.” Of each of these things we have spoken above (a. 1; q. 104, a. 2; q. 110, a. 1; q. 113; q. 114). It is therefore manifest that fate is in the created causes themselves, as ordered by God to the production of their effects.

Reply to Objection 1. The ordering itself of second causes, which Augustine (De Civ. Dei v, 8) calls the “series of causes,” has not the nature of fate, except as dependent on God. Wherefore the Divine power or will can be called fate, as being the cause of fate. But essentially fate is the very disposition or “series,” i.e. order, of second causes.

Reply to Objection 2. Fate has the nature of a cause, just as much as the second causes themselves, the ordering of which is called fate.

Reply to Objection 3. Fate is called a disposition, not that disposition which is a species of quality, but in the sense in which it signifies order, which is not a substance, but a relation. And if this order be considered in relation to its principle, it is one; and thus fate is one. But if it be considered in relation to its effects, or to the mediate causes, this fate is multiple. In this sense the poet wrote: “Thy fate draws thee.”

Whether fate is unchangeable?

Ia q. 116 a. 3

Objection 1. It seems that fate is not unchangeable. For Boethius says (De Consol. iv): “As reasoning is to the intellect, as the begotten is to that which is, as time to eternity, as the circle to its centre; so is the fickle chain of fate to the unwavering simplicity of Providence.”

Objection 2. Further, the Philosopher says (Topic. ii, 7): “If we be moved, what is in us is moved.” But fate is a “disposition inherent to changeable things,” as Boethius says (De Consol. iv). Therefore fate is changeable.

Objection 3. Further, if fate is unchangeable, what is subject to fate happens unchangeably and of necessity. But things ascribed to fate seem principally to be contingencies. Therefore there would be no contingencies in the world, but all things would happen of necessity.

On the contrary, Boethius says (De Consol. iv) that fate is an unchangeable disposition.

I answer that, The disposition of second causes

which we call fate, can be considered in two ways: firstly, in regard to the second causes, which are thus disposed or ordered; secondly, in regard to the first principle, namely, God, by Whom they are ordered. Some, therefore, have held that the series itself or dispositions of causes is in itself necessary, so that all things would happen of necessity; for this reason that each effect has a cause, and given a cause the effect must follow of necessity. But this is false, as proved above (q. 115, a. 6).

Others, on the other hand, held that fate is changeable, even as dependent on Divine Providence. Wherefore the Egyptians said that fate could be changed by certain sacrifices, as Gregory of Nyssa says (Nemesius, De Homine). This too has been disproved above for the reason that it is repugnant to Divine Providence.

We must therefore say that fate, considered in regard to second causes, is changeable; but as subject to Divine Providence, it derives a certain unchangeableness, not of absolute but of conditional necessity. In this sense we say that this conditional is true and necessary: “If

God foreknew that this would happen, it will happen.” Wherefore Boethius, having said that the chain of fate is fickle, shortly afterwards adds—“which, since it is de-

rived from an unchangeable Providence must also itself be unchangeable.”

From this the answers to the objections are clear.

Whether all things are subject to fate?

Ia q. 116 a. 4

Objection 1. It seems that all things are subject to fate. For Boethius says (De Consol. iv): “The chain of fate moves the heaven and the stars, tempers the elements to one another, and models them by a reciprocal transformation. By fate all things that are born into the world and perish are renewed in a uniform progression of offspring and seed.” Nothing therefore seems to be excluded from the domain of fate.

Objection 2. Further, Augustine says (De Civ. Dei v, 1) that fate is something real, as referred to the Divine will and power. But the Divine will is cause of all things that happen, as Augustine says (De Trin. iii, 1 seqq.). Therefore all things are subject to fate.

Objection 3. Further, Boethius says (De Consol. iv) that fate “is a disposition inherent to changeable things.” But all creatures are changeable, and God alone is truly unchangeable, as stated above (q. 9, a. 2). Therefore fate is in all things.

On the contrary, Boethius says (De Consol. iv) that “some things subject to Providence are above the ordering of fate.”

I answer that, As stated above (a. 2), fate is the ordering of second causes to effects foreseen by God. Whatever, therefore, is subject to second causes, is sub-

ject also to fate. But whatever is done immediately by God, since it is not subject to second causes, neither is it subject to fate; such are creation, the glorification of spiritual substances, and the like. And this is what Boethius says (De Consol. iv): viz. that “those things which are nigh to God have a state of immobility, and exceed the changeable order of fate.” Hence it is clear that “the further a thing is from the First Mind, the more it is involved in the chain of fate”; since so much the more it is bound up with second causes.

Reply to Objection 1. All the things mentioned in this passage are done by God by means of second causes; for this reason they are contained in the order of fate. But it is not the same with everything else, as stated above.

Reply to Objection 2. Fate is to be referred to the Divine will and power, as to its first principle. Consequently it does not follow that whatever is subject to the Divine will or power, is subject also to fate, as already stated.

Reply to Objection 3. Although all creatures are in some way changeable, yet some of them do not proceed from changeable created causes. And these, therefore, are not subject to fate, as stated above.

Objection 1. It would seem that fate is nothing. For Gregory says in a homily for the Epiphany (Hom. x in Evang.): “Far be it from the hearts of the faithful to think that fate is anything real.”

Objection 2. Further, what happens by fate is not unforeseen, for as Augustine says (De Civ. Dei v, 4), “fate is understood to be derived from the verb ‘fari’ which means to speak”; as though things were said to happen by fate, which are “fore-spoken” by one who decrees them to happen. Now what is foreseen is neither lucky nor chance-like. If therefore things happen by fate, there will be neither luck nor chance in the world.

On the contrary, What does not exist cannot be defined. But Boethius (De Consol. iv) defines fate thus: “Fate is a disposition inherent to changeable things, by which Providence connects each one with its proper order.”

I answer that, In this world some things seem to happen by luck or chance. Now it happens sometimes that something is lucky or chance-like as compared to inferior causes, which, if compared to some higher cause, is directly intended. For instance, if two servants are sent by their master to the same place; the meeting of the two servants in regard to themselves is by chance; but as compared to the master, who had ordered it, it is directly intended.

So there were some who refused to refer to a higher cause such events which by luck or chance take place here below. These denied the existence of fate and Providence, as Augustine relates of Tully (De Civ. Dei v, 9). And this is contrary to what we have said above about Providence (q. 22, a. 2).

On the other hand, some have considered that everything that takes place here below by luck or by chance, whether in natural things or in human affairs, is to be reduced to a superior cause, namely, the heavenly bodies. According to these fate is nothing else than “a disposition of the stars under which each one is begotten or born”*. But this will not hold. First, as to human affairs: because we have proved above (q. 115, a. 4) that human actions are not subject to the action of heavenly bodies, save accidentally and indirectly. Now the cause of fate, since it has the ordering of things that happen by fate, must of necessity be directly and of itself the cause of what takes place. Secondly, as to all things that happen accidentally: for it has been said (q. 115, a. 6) that what

is accidental, is properly speaking neither a being, nor a unity. But every action of nature terminates in some one thing. Wherefore it is impossible for that which is accidental to be the proper effect of an active natural principle. No natural cause can therefore have for its proper effect that a man intending to dig a grace finds a treasure. Now it is manifest that a heavenly body acts after the manner of a natural principle: wherefore its effects in this world are natural. It is therefore impossible that any active power of a heavenly body be the cause of what happens by accident here below, whether by luck or by chance.

We must therefore say that what happens here by accident, both in natural things and in human affairs, is reduced to a preordaining cause, which is Divine Providence. For nothing hinders that which happens by accident being considered as one by an intellect: otherwise the intellect could not form this proposition: “The digger of a grave found a treasure.” And just as an intellect can apprehend this so can it effect it; for instance, someone who knows a place where a treasure is hidden, might instigate a rustic, ignorant of this, to dig a grave there. Consequently, nothing hinders what happens here by accident, by luck or by chance, being reduced to some ordering cause which acts by the intellect, especially the Divine intellect. For God alone can change the will, as shown above (q. 105, a. 4). Consequently the ordering of human actions, the principle of which is the will, must be ascribed to God alone.

So therefore inasmuch as all that happens here below is subject to Divine Providence, as being preordained, and as it were “fore-spoken,” we can admit the existence of fate: although the holy doctors avoided the use of this word, on account of those who twisted its application to a certain force in the position of the stars. Hence Augustine says (De Civ. Dei v, 1): “If anyone ascribes human affairs to fate, meaning thereby the will or power of God, let him keep to his opinion, but hold his tongue.” For this reason Gregory denies the existence of fate: wherefore the first objection’s solution is manifest.

Reply to Objection 2. Nothing hinders certain things happening by luck or by chance, if compared to their proximate causes: but not if compared to Divine Providence, whereby “nothing happens at random in the world,” as Augustine says (QQ. 83, qu. 24).

* Cf. St. Augustine De Civ. Dei v, 1,8,9

Objection 1. It would seem that fate is not in created things. For Augustine says (*De Civ. Dei* v, 1) that the “Divine will or power is called fate.” But the Divine will or power is not in creatures, but in God. Therefore fate is not in creatures but in God.

Objection 2. Further, fate is compared to things that happen by fate, as their cause; as the very use of the word proves. But the universal cause that of itself effects what takes place by accident here below, is God alone, as stated above (a. 1). Therefore fate is in God, and not in creatures.

Objection 3. Further, if fate is in creatures, it is either a substance or an accident: and whichever it is it must be multiplied according to the number of creatures. Since, therefore, fate seems to be one thing only, it seems that fate is not in creatures, but in God.

On the contrary, Boethius says (*De Consol.* iv): “Fate is a disposition inherent to changeable things.”

I answer that, As is clear from what has been stated above (q. 22, a. 3; q. 103, a. 6), Divine Providence produces effects through mediate causes. We can therefore consider the ordering of the effects in two ways. Firstly, as being in God Himself: and thus the ordering of the effects is called Providence. But if we consider this ordering as being in the mediate causes ordered by God to the production of certain effects, thus it has the nature of fate. This is what Boethius says (*De Consol.* iv): “Fate is worked out when Divine Providence is served

by certain spirits; whether by the soul, or by all nature itself which obeys Him, whether by the heavenly movements of the stars, whether by the angelic power, or by the ingenuity of the demons, whether by some of these, or by all, the chain of fate is forged.” Of each of these things we have spoken above (a. 1; q. 104, a. 2; q. 110, a. 1; q. 113; q. 114). It is therefore manifest that fate is in the created causes themselves, as ordered by God to the production of their effects.

Reply to Objection 1. The ordering itself of second causes, which Augustine (*De Civ. Dei* v, 8) calls the “series of causes,” has not the nature of fate, except as dependent on God. Wherefore the Divine power or will can be called fate, as being the cause of fate. But essentially fate is the very disposition or “series,” i.e. order, of second causes.

Reply to Objection 2. Fate has the nature of a cause, just as much as the second causes themselves, the ordering of which is called fate.

Reply to Objection 3. Fate is called a disposition, not that disposition which is a species of quality, but in the sense in which it signifies order, which is not a substance, but a relation. And if this order be considered in relation to its principle, it is one; and thus fate is one. But if it be considered in relation to its effects, or to the mediate causes, this fate is multiple. In this sense the poet wrote: “Thy fate draws thee.”

Objection 1. It seems that fate is not unchangeable. For Boethius says (De Consol. iv): “As reasoning is to the intellect, as the begotten is to that which is, as time to eternity, as the circle to its centre; so is the fickle chain of fate to the unwavering simplicity of Providence.”

Objection 2. Further, the Philosopher says (Topic. ii, 7): “If we be moved, what is in us is moved.” But fate is a “disposition inherent to changeable things,” as Boethius says (De Consol. iv). Therefore fate is changeable.

Objection 3. Further, if fate is unchangeable, what is subject to fate happens unchangeably and of necessity. But things ascribed to fate seem principally to be contingencies. Therefore there would be no contingencies in the world, but all things would happen of necessity.

On the contrary, Boethius says (De Consol. iv) that fate is an unchangeable disposition.

I answer that, The disposition of second causes which we call fate, can be considered in two ways: firstly, in regard to the second causes, which are thus disposed or ordered; secondly, in regard to the first prin-

ciple, namely, God, by Whom they are ordered. Some, therefore, have held that the series itself or dispositions of causes is in itself necessary, so that all things would happen of necessity; for this reason that each effect has a cause, and given a cause the effect must follow of necessity. But this is false, as proved above (q. 115, a. 6).

Others, on the other hand, held that fate is changeable, even as dependent on Divine Providence. Wherefore the Egyptians said that fate could be changed by certain sacrifices, as Gregory of Nyssa says (Nemesius, De Homine). This too has been disproved above for the reason that it is repugnant to Divine Providence.

We must therefore say that fate, considered in regard to second causes, is changeable; but as subject to Divine Providence, it derives a certain unchangeableness, not of absolute but of conditional necessity. In this sense we say that this conditional is true and necessary: “If God foreknew that this would happen, it will happen.” Wherefore Boethius, having said that the chain of fate is fickle, shortly afterwards adds—“which, since it is derived from an unchangeable Providence must also itself be unchangeable.”

From this the answers to the objections are clear.

Objection 1. It seems that all things are subject to fate. For Boethius says (De Consol. iv): “The chain of fate moves the heaven and the stars, tempers the elements to one another, and models them by a reciprocal transformation. By fate all things that are born into the world and perish are renewed in a uniform progression of offspring and seed.” Nothing therefore seems to be excluded from the domain of fate.

Objection 2. Further, Augustine says (De Civ. Dei v, 1) that fate is something real, as referred to the Divine will and power. But the Divine will is cause of all things that happen, as Augustine says (De Trin. iii, 1 seqq.). Therefore all things are subject to fate.

Objection 3. Further, Boethius says (De Consol. iv) that fate “is a disposition inherent to changeable things.” But all creatures are changeable, and God alone is truly unchangeable, as stated above (q. 9, a. 2). Therefore fate is in all things.

On the contrary, Boethius says (De Consol. iv) that “some things subject to Providence are above the ordering of fate.”

I answer that, As stated above (a. 2), fate is the ordering of second causes to effects foreseen by God. Whatever, therefore, is subject to second causes, is sub-

ject also to fate. But whatever is done immediately by God, since it is not subject to second causes, neither is it subject to fate; such are creation, the glorification of spiritual substances, and the like. And this is what Boethius says (De Consol. iv): viz. that “those things which are nigh to God have a state of immobility, and exceed the changeable order of fate.” Hence it is clear that “the further a thing is from the First Mind, the more it is involved in the chain of fate”; since so much the more it is bound up with second causes.

Reply to Objection 1. All the things mentioned in this passage are done by God by means of second causes; for this reason they are contained in the order of fate. But it is not the same with everything else, as stated above.

Reply to Objection 2. Fate is to be referred to the Divine will and power, as to its first principle. Consequently it does not follow that whatever is subject to the Divine will or power, is subject also to fate, as already stated.

Reply to Objection 3. Although all creatures are in some way changeable, yet some of them do not proceed from changeable created causes. And these, therefore, are not subject to fate, as stated above.

FIRST PART, QUESTION 117
Of Things Pertaining to the Action of Man
(In Four Articles)

We have next to consider those things which pertain to the action of man, who is composed of a created corporeal and spiritual nature. In the first place we shall consider that action (in general) and secondly in regard to the propagation of man from man. As to the first, there are four points of inquiry:

- (1) Whether one man can teach another, as being the cause of his knowledge?
- (2) Whether man can teach an angel?
- (3) Whether by the power of his soul man can change corporeal matter?
- (4) Whether the separate soul of man can move bodies by local movement?

Whether one man can teach another?

Ia q. 117 a. 1

Objection 1. It would seem that one man cannot teach another. For the Lord says (Mat. 22:8): “Be not you called Rabbi”: on which the gloss of Jerome says, “Lest you give to men the honor due to God.” Therefore to be a master is properly an honor due to God. But it belongs to a master to teach. Therefore man cannot teach, and this is proper to God.

Objection 2. Further, if one man teaches another this is only inasmuch as he acts through his own knowledge, so as to cause knowledge in the other. But a quality through which anyone acts so as to produce his like, is an active quality. Therefore it follows that knowledge is an active quality just as heat is.

Objection 3. Further, for knowledge we require intellectual light, and the species of the thing understood. But a man cannot cause either of these in another man. Therefore a man cannot by teaching cause knowledge in another man.

Objection 4. Further, the teacher does nothing in regard to a disciple save to propose to him certain signs, so as to signify something by words or gestures. But it is not possible to teach anyone so as to cause knowledge in him, by putting signs before him. For these are signs either of things that he knows, or of things he does not know. If of things that he knows, he to whom these signs are proposed is already in the possession of knowledge, and does not acquire it from the master. If they are signs of things that he does not know, he can learn nothing therefrom: for instance, if one were to speak Greek to a man who only knows Latin, he would learn nothing thereby. Therefore in no way can a man cause knowledge in another by teaching him.

On the contrary, The Apostle says (1 Tim. 2:7): “Whereunto I am appointed a preacher and an apostle... a doctor of the Gentiles in faith and truth.”

I answer that, On this question there have been various opinions. For Averroes, commenting on De Anima iii, maintains that all men have one passive intellect in common, as stated above (q. 76, a. 2). From this it follows that the same intelligible species belong to all men. Consequently he held that one man does not cause another to have a knowledge distinct from that which

he has himself; but that he communicates the identical knowledge which he has himself, by moving him to order rightly the phantasms in his soul, so that they be rightly disposed for intelligible apprehension. This opinion is true so far as knowledge is the same in disciple and master, if we consider the identity of the thing known: for the same objective truth is known by both of them. But so far as he maintains that all men have but one passive intellect, and the same intelligible species, differing only as to various phantasms, his opinion is false, as stated above (q. 76, a. 2).

Besides this, there is the opinion of the Platonists, who held that our souls are possessed of knowledge from the very beginning, through the participation of separate forms, as stated above (q. 84, Aa. 3,4); but that the soul is hindered, through its union with the body, from the free consideration of those things which it knows. According to this, the disciple does not acquire fresh knowledge from his master, but is roused by him to consider what he knows; so that to learn would be nothing else than to remember. In the same way they held that natural agents only dispose (matter) to receive forms, which matter acquires by a participation of separate substances. But against this we have proved above (q. 79, a. 2; q. 84, a. 3) that the passive intellect of the human soul is in pure potentiality to intelligible (species), as Aristotle says (De Anima iii, 4).

We must therefore decide the question differently, by saying that the teacher causes knowledge in the learner, by reducing him from potentiality to act, as the Philosopher says (Phys. viii, 4). In order to make this clear, we must observe that of effects proceeding from an exterior principle, some proceed from the exterior principle alone; as the form of a house is caused to be in matter by art alone: whereas other effects proceed sometimes from an exterior principle, sometimes from an interior principle: thus health is caused in a sick man, sometimes by an exterior principle, namely by the medical art, sometimes by an interior principle as when a man is healed by the force of nature. In these latter effects two things must be noticed. First, that art in its work imitates nature for just as nature heals a man by

alteration, digestion, rejection of the matter that caused the sickness, so does art. Secondly, we must remark that the exterior principle, art, acts, not as principal agent, but as helping the principal agent, but as helping the principal agent, which is the interior principle, by strengthening it, and by furnishing it with instruments and assistance, of which the interior principle makes use in producing the effect. Thus the physician strengthens nature, and employs food and medicine, of which nature makes use for the intended end.

Now knowledge is acquired in man, both from an interior principle, as is clear in one who procures knowledge by his own research; and from an exterior principle, as is clear in one who learns (by instruction). For in every man there is a certain principle of knowledge, namely the light of the active intellect, through which certain universal principles of all the sciences are naturally understood as soon as proposed to the intellect. Now when anyone applies these universal principles to certain particular things, the memory or experience of which he acquires through the senses; then by his own research advancing from the known to the unknown, he obtains knowledge of what he knew not before. Wherefore anyone who teaches, leads the disciple from things known by the latter, to the knowledge of things previously unknown to him; according to what the Philosopher says (Poster. i, 1): "All teaching and all learning proceed from previous knowledge."

Now the master leads the disciple from things known to knowledge of the unknown, in a twofold manner. Firstly, by proposing to him certain helps or means of instruction, which his intellect can use for the acquisition of science: for instance, he may put before him certain less universal propositions, of which nevertheless the disciple is able to judge from previous knowledge: or he may propose to him some sensible examples, either by way of likeness or of opposition, or something of the sort, from which the intellect of the learner is led to the knowledge of truth previously unknown. Secondly, by strengthening the intellect of the

learner; not, indeed, by some active power as of a higher nature, as explained above (q. 106, a. 1; q. 111, a. 1) of the angelic enlightenment, because all human intellects are of one grade in the natural order; but inasmuch as he proposes to the disciple the order of principles to conclusions, by reason of his not having sufficient collating power to be able to draw the conclusions from the principles. Hence the Philosopher says (Poster. i, 2) that "a demonstration is a syllogism that causes knowledge." In this way a demonstrator causes his hearer to know.

Reply to Objection 1. As stated above, the teacher only brings exterior help as the physician who heals: but just as the interior nature is the principal cause of the healing, so the interior light of the intellect is the principal cause of knowledge. But both of these are from God. Therefore as of God is it written: "Who healeth all thy diseases" (Ps. 102:3); so of Him is it written: "He that teacheth man knowledge" (Ps. 93:10), inasmuch as "the light of His countenance is signed upon us" (Ps. 4:7), through which light all things are shown to us.

Reply to Objection 2. As Averroes argues, the teacher does not cause knowledge in the disciple after the manner of a natural active cause. Wherefore knowledge need not be an active quality: but is the principle by which one is directed in teaching, just as art is the principle by which one is directed in working.

Reply to Objection 3. The master does not cause the intellectual light in the disciple, nor does he cause the intelligible species directly: but he moves the disciple by teaching, so that the latter, by the power of his intellect, forms intelligible concepts, the signs of which are proposed to him from without.

Reply to Objection 4. The signs proposed by the master to the disciple are of things known in a general and confused manner; but not known in detail and distinctly. Therefore when anyone acquires knowledge by himself, he cannot be called self-taught, or be said to have his own master because perfect knowledge did not precede in him, such as is required in a master.

Whether man can teach the angels?

Ia q. 117 a. 2

Objection 1. It would seem that men teach angels. For the Apostle says (Eph. 3:10): "That the manifold wisdom of God may be made known to the principalities and powers in the heavenly places through the Church." But the Church is the union of all the faithful. Therefore some things are made known to angels through men.

Objection 2. Further, the superior angels, who are enlightened immediately concerning Divine things by God, can instruct the inferior angels, as stated above (q. 116, a. 1; q. 112, a. 3). But some men are instructed immediately concerning Divine things by the Word of God; as appears principally of the apostles from Heb. 1:1,2: "Last of all, in these days (God) hath spoken to

us by His Son." Therefore some men have been able to teach the angels.

Objection 3. Further, the inferior angels are instructed by the superior. But some men are higher than some angels; since some men are taken up to the highest angelic orders, as Gregory says in a homily (Hom. xxxiv in Evang.). Therefore some of the inferior angels can be instructed by men concerning Divine things.

On the contrary, Dionysius says (Div. Nom. iv) that every Divine enlightenment to the superior angels, by making their thoughts known to them; but concerning Divine things superior angels are never enlightened by inferior angels. Now it is manifest that in the same way as inferior angels are subject to the superior, the

highest men are subject even to the lowest angels. This is clear from Our Lord's words (Mat. 11:11): "There hath not risen among them that are born of woman a greater than John the Baptist; yet he that is lesser in the kingdom of heaven is greater than he." Therefore angels are never enlightened by men concerning Divine things. But men can by means of speech make known to angels the thoughts of their hearts: because it belongs to God alone to know the heart's secrets.

Reply to Objection 1. Augustine (Gen. ad lit. v, 19) thus explains this passage of the Apostle, who in the preceding verses says: "To me, the least of all the saints, is given this grace. . . to enlighten all men, that they may see what is the dispensation of the mystery which hath been hidden from eternity in God. Hidden, yet so that the multiform wisdom of God was made known to the principalities and powers in the heavenly places—that is, through the Church." As though he were to say: This mystery was hidden from men, but not from the Church in heaven, which is contained in the principalities and powers who knew it "from all ages, but not before all ages: because the Church was at first there, where after the resurrection this Church composed of men will be gathered together."

It can also be explained otherwise that "what is

hidden, is known by the angels, not only in God, but also here where when it takes place and is made public," as Augustine says further on (Gen. ad lit. v, 19). Thus when the mysteries of Christ and the Church were fulfilled by the apostles, some things concerning these mysteries became apparent to the angels, which were hidden from them before. In this way we can understand what Jerome says (Comment. in Ep. ad Eph.)—that from the preaching of the apostles the angels learned certain mysteries; that is to say, through the preaching of the apostles, the mysteries were realized in the things themselves: thus by the preaching of Paul the Gentiles were converted, of which mystery the Apostle is speaking in the passage quoted.

Reply to Objection 2. The apostles were instructed immediately by the Word of God, not according to His Divinity, but according as He spoke in His human nature. Hence the argument does not prove.

Reply to Objection 3. Certain men in this state of life are greater than certain angels, not actually, but virtually; forasmuch as they have such great charity that they can merit a higher degree of beatitude than that possessed by certain angels. In the same way we might say that the seed of a great tree is virtually greater than a small tree, though actually it is much smaller.

Whether man by the power of his soul can change corporeal matter?

Ia q. 117 a. 3

Objection 1. It would seem that man by the power of his soul can change corporeal matter. For Gregory says (Dialog. ii, 30): "Saints work miracles sometimes by prayer, sometimes by their power: thus Peter, by prayer, raised the dead Tabitha to life, and by his reproof delivered to death the lying Ananias and Saphira." But in the working of miracles a change is wrought in corporeal matter. Therefore men, by the power of the soul, can change corporeal matter.

Objection 2. Further, on these words (Gal. 3:1): "Who hath bewitched you, that you should not obey the truth?" the gloss says that "some have blazing eyes, who by a single look bewitch others, especially children." But this would not be unless the power of the soul could change corporeal matter. Therefore man can change corporeal matter by the power of his soul.

Objection 3. Further, the human body is nobler than other inferior bodies. But by the apprehension of the human soul the human body is changed to heat and cold, as appears when a man is angry or afraid: indeed this change sometimes goes so far as to bring on sickness and death. Much more, then, can the human soul by its power change corporeal matter.

On the contrary, Augustine says (De Trin. iii, 8): "Corporeal matter obeys God alone at will."

I answer that, As stated above (q. 110, a. 2), corporeal matter is not changed to (the reception of) a form save either by some agent composed of matter and form, or by God Himself, in whom both matter and form

pre-exist virtually, as in the primordial cause of both. Wherefore of the angels also we have stated (q. 110, a. 2) that they cannot change corporeal matter by their natural power, except by employing corporeal agents for the production of certain effects. Much less therefore can the soul, by its natural power, change corporeal matter, except by means of bodies.

Reply to Objection 1. The saints are said to work miracles by the power of grace, not of nature. This is clear from what Gregory says in the same place: "Those who are sons of God, in power, as John says—what wonder is there that they should work miracles by that power?"

Reply to Objection 2. Avicenna assigns the cause of bewitchment to the fact that corporeal matter has a natural tendency to obey spiritual substance rather than natural contrary agents. Therefore when the soul is of strong imagination, it can change corporeal matter. This he says is the cause of the "evil eye."

But it has been shown above (q. 110, a. 2) that corporeal matter does not obey spiritual substances at will, but the Creator alone. Therefore it is better to say, that by a strong imagination the (corporeal) spirits of the body united to that soul are changed, which change in the spirits takes place especially in the eyes, to which the more subtle spirits can reach. And the eyes infect the air which is in contact with them to a certain distance: in the same way as a new and clear mirror contracts a tarnish from the look of a "menstruata," as Aristotle says

(De Somn. et Vigil.)*).

Hence then when a soul is vehemently moved to wickedness, as occurs mostly in little old women, according to the above explanation, the countenance becomes venomous and hurtful, especially to children, who have a tender and most impressionable body. It is also possible that by God's permission, or from some hidden deed, the spiteful demons co-operate in this, as the witches may have some compact with them.

Reply to Objection 3. The soul is united to the body

as its form; and the sensitive appetite, which obeys the reason in a certain way, as stated above (q. 81, a. 3), it is the act of a corporeal organ. Therefore at the apprehension of the human soul, the sensitive appetite must needs be moved with an accompanying corporeal operation. But the apprehension of the human soul does not suffice to work a change in exterior bodies, except by means of a change in the body united to it, as stated above (ad 2).

Whether the separate human soul can move bodies at least locally?

Ia q. 117 a. 4

Objection 1. It seems that the separate human soul can move bodies at least locally. For a body naturally obeys a spiritual substance as to local motion, as stated above (q. 110, a. 5). But the separate soul is a spiritual substance. Therefore it can move exterior bodies by its command.

Objection 2. Further, in the Itinerary of Clement it is said in the narrative of Nicetas to Peter, that Simon Magus, by sorcery retained power over the soul of a child that he had slain, and that through this soul he worked magical wonders. But this could not have been without some corporeal change at least as to place. Therefore, the separate soul has the power to move bodies locally.

On the contrary, the Philosopher says (De Anima i, 3) that the soul cannot move any other body whatsoever but its own.

I answer that, The separate soul cannot by its natural power move a body. For it is manifest that, even while the soul is united to the body, it does not move the body except as endowed with life: so that if one of the members become lifeless, it does not obey the soul as to local motion. Now it is also manifest that no body is quickened by the separate soul. Therefore within the

limits of its natural power the separate soul cannot command the obedience of a body; though, by the power of God, it can exceed those limits.

Reply to Objection 1. There are certain spiritual substances whose powers are not determinate to certain bodies; such are the angels who are naturally unfettered by a body; consequently various bodies may obey them as to movement. But if the motive power of a separate substance is naturally determinate to move a certain body, that substance will not be able to move a body of higher degree, but only one of lower degree: thus according to philosophers the mover of the lower heaven cannot move the higher heaven. Wherefore, since the soul is by its nature determinate to move the body of which it is the form, it cannot by its natural power move any other body.

Reply to Objection 2. As Augustine (De Civ. Dei x, 11) and Chrysostom (Hom. xxviii in Matt.) say, the demons often pretend to be the souls of the dead, in order to confirm the error of heathen superstition. It is therefore credible that Simon Magus was deceived by some demon who pretended to be the soul of the child whom the magician had slain.

* De Insomniis ii

Objection 1. It would seem that one man cannot teach another. For the Lord says (Mat. 22:8): “Be not you called Rabbi”: on which the gloss of Jerome says, “Lest you give to men the honor due to God.” Therefore to be a master is properly an honor due to God. But it belongs to a master to teach. Therefore man cannot teach, and this is proper to God.

Objection 2. Further, if one man teaches another this is only inasmuch as he acts through his own knowledge, so as to cause knowledge in the other. But a quality through which anyone acts so as to produce his like, is an active quality. Therefore it follows that knowledge is an active quality just as heat is.

Objection 3. Further, for knowledge we require intellectual light, and the species of the thing understood. But a man cannot cause either of these in another man. Therefore a man cannot by teaching cause knowledge in another man.

Objection 4. Further, the teacher does nothing in regard to a disciple save to propose to him certain signs, so as to signify something by words or gestures. But it is not possible to teach anyone so as to cause knowledge in him, by putting signs before him. For these are signs either of things that he knows, or of things he does not know. If of things that he knows, he to whom these signs are proposed is already in the possession of knowledge, and does not acquire it from the master. If they are signs of things that he does not know, he can learn nothing therefrom: for instance, if one were to speak Greek to a man who only knows Latin, he would learn nothing thereby. Therefore in no way can a man cause knowledge in another by teaching him.

On the contrary, The Apostle says (1 Tim. 2:7): “Whereunto I am appointed a preacher and an apostle. . . a doctor of the Gentiles in faith and truth.”

I answer that, On this question there have been various opinions. For Averroes, commenting on *De Anima* iii, maintains that all men have one passive intellect in common, as stated above (q. 76, a. 2). From this it follows that the same intelligible species belong to all men. Consequently he held that one man does not cause another to have a knowledge distinct from that which he has himself; but that he communicates the identical knowledge which he has himself, by moving him to order rightly the phantasms in his soul, so that they be rightly disposed for intelligible apprehension. This opinion is true so far as knowledge is the same in disciple and master, if we consider the identity of the thing known: for the same objective truth is known by both of them. But so far as he maintains that all men have but one passive intellect, and the same intelligible species, differing only as to various phantasms, his opinion is false, as stated above (q. 76, a. 2).

Besides this, there is the opinion of the Platonists, who held that our souls are possessed of knowledge from the very beginning, through the participation of

separate forms, as stated above (q. 84, Aa. 3,4); but that the soul is hindered, through its union with the body, from the free consideration of those things which it knows. According to this, the disciple does not acquire fresh knowledge from his master, but is roused by him to consider what he knows; so that to learn would be nothing else than to remember. In the same way they held that natural agents only dispose (matter) to receive forms, which matter acquires by a participation of separate substances. But against this we have proved above (q. 79, a. 2; q. 84, a. 3) that the passive intellect of the human soul is in pure potentiality to intelligible (species), as Aristotle says (*De Anima* iii, 4).

We must therefore decide the question differently, by saying that the teacher causes knowledge in the learner, by reducing him from potentiality to act, as the Philosopher says (*Phys.* viii, 4). In order to make this clear, we must observe that of effects proceeding from an exterior principle, some proceed from the exterior principle alone; as the form of a house is caused to be in matter by art alone: whereas other effects proceed sometimes from an exterior principle, sometimes from an interior principle: thus health is caused in a sick man, sometimes by an exterior principle, namely by the medical art, sometimes by an interior principle as when a man is healed by the force of nature. In these latter effects two things must be noticed. First, that art in its work imitates nature for just as nature heals a man by alteration, digestion, rejection of the matter that caused the sickness, so does art. Secondly, we must remark that the exterior principle, art, acts, not as principal agent, but as helping the principal agent, but as helping the principal agent, which is the interior principle, by strengthening it, and by furnishing it with instruments and assistance, of which the interior principle makes use in producing the effect. Thus the physician strengthens nature, and employs food and medicine, of which nature makes use for the intended end.

Now knowledge is acquired in man, both from an interior principle, as is clear in one who procures knowledge by his own research; and from an exterior principle, as is clear in one who learns (by instruction). For in every man there is a certain principle of knowledge, namely the light of the active intellect, through which certain universal principles of all the sciences are naturally understood as soon as proposed to the intellect. Now when anyone applies these universal principles to certain particular things, the memory or experience of which he acquires through the senses; then by his own research advancing from the known to the unknown, he obtains knowledge of what he knew not before. Wherefore anyone who teaches, leads the disciple from things known by the latter, to the knowledge of things previously unknown to him; according to what the Philosopher says (*Poster.* i, 1): “All teaching and all learning proceed from previous knowledge.”

Now the master leads the disciple from things known to knowledge of the unknown, in a twofold manner. Firstly, by proposing to him certain helps or means of instruction, which his intellect can use for the acquisition of science: for instance, he may put before him certain less universal propositions, of which nevertheless the disciple is able to judge from previous knowledge: or he may propose to him some sensible examples, either by way of likeness or of opposition, or something of the sort, from which the intellect of the learner is led to the knowledge of truth previously unknown. Secondly, by strengthening the intellect of the learner; not, indeed, by some active power as of a higher nature, as explained above (q. 106, a. 1; q. 111, a. 1) of the angelic enlightenment, because all human intellects are of one grade in the natural order; but inasmuch as he proposes to the disciple the order of principles to conclusions, by reason of his not having sufficient collating power to be able to draw the conclusions from the principles. Hence the Philosopher says (Poster. i, 2) that “a demonstration is a syllogism that causes knowledge.” In this way a demonstrator causes his hearer to know.

Reply to Objection 1. As stated above, the teacher only brings exterior help as the physician who heals: but just as the interior nature is the principal cause of the healing, so the interior light of the intellect is the prin-

cipal cause of knowledge. But both of these are from God. Therefore as of God is it written: “Who healeth all thy diseases” (Ps. 102:3); so of Him is it written: “He that teacheth man knowledge” (Ps. 93:10), inasmuch as “the light of His countenance is signed upon us” (Ps. 4:7), through which light all things are shown to us.

Reply to Objection 2. As Averroes argues, the teacher does not cause knowledge in the disciple after the manner of a natural active cause. Wherefore knowledge need not be an active quality: but is the principle by which one is directed in teaching, just as art is the principle by which one is directed in working.

Reply to Objection 3. The master does not cause the intellectual light in the disciple, nor does he cause the intelligible species directly: but he moves the disciple by teaching, so that the latter, by the power of his intellect, forms intelligible concepts, the signs of which are proposed to him from without.

Reply to Objection 4. The signs proposed by the master to the disciple are of things known in a general and confused manner; but not known in detail and distinctly. Therefore when anyone acquires knowledge by himself, he cannot be called self-taught, or be said to have his own master because perfect knowledge did not precede in him, such as is required in a master.

Objection 1. It would seem that men teach angels. For the Apostle says (Eph. 3:10): “That the manifold wisdom of God may be made known to the principalities and powers in the heavenly places through the Church.” But the Church is the union of all the faithful. Therefore some things are made known to angels through men.

Objection 2. Further, the superior angels, who are enlightened immediately concerning Divine things by God, can instruct the inferior angels, as stated above (q. 116, a. 1; q. 112, a. 3). But some men are instructed immediately concerning Divine things by the Word of God; as appears principally of the apostles from Heb. 1:1,2: “Last of all, in these days (God) hath spoken to us by His Son.” Therefore some men have been able to teach the angels.

Objection 3. Further, the inferior angels are instructed by the superior. But some men are higher than some angels; since some men are taken up to the highest angelic orders, as Gregory says in a homily (Hom. xxxiv in Evang.). Therefore some of the inferior angels can be instructed by men concerning Divine things.

On the contrary, Dionysius says (Div. Nom. iv) that every Divine enlightenment to the superior angels, by making their thoughts known to them; but concerning Divine things superior angels are never enlightened by inferior angels. Now it is manifest that in the same way as inferior angels are subject to the superior, the highest men are subject even to the lowest angels. This is clear from Our Lord’s words (Mat. 11:11): “There hath not risen among them that are born of woman a greater than John the Baptist; yet he that is lesser in the kingdom of heaven is greater than he.” Therefore angels are never enlightened by men concerning Divine things. But men can by means of speech make known to angels the thoughts of their hearts: because it belongs to God alone to know the heart’s secrets.

Reply to Objection 1. Augustine (Gen. ad lit. v, 19) thus explains this passage of the Apostle, who in the

preceding verses says: “To me, the least of all the saints, is given this grace. . . to enlighten all men, that they may see what is the dispensation of the mystery which hath been hidden from eternity in God. Hidden, yet so that the multiform wisdom of God was made known to the principalities and powers in the heavenly places—that is, through the Church.” As though he were to say: This mystery was hidden from men, but not from the Church in heaven, which is contained in the principalities and powers who knew it “from all ages, but not before all ages: because the Church was at first there, where after the resurrection this Church composed of men will be gathered together.”

It can also be explained otherwise that “what is hidden, is known by the angels, not only in God, but also here where when it takes place and is made public,” as Augustine says further on (Gen. ad lit. v, 19). Thus when the mysteries of Christ and the Church were fulfilled by the apostles, some things concerning these mysteries became apparent to the angels, which were hidden from them before. In this way we can understand what Jerome says (Comment. in Ep. ad Eph.)—that from the preaching of the apostles the angels learned certain mysteries; that is to say, through the preaching of the apostles, the mysteries were realized in the things themselves: thus by the preaching of Paul the Gentiles were converted, of which mystery the Apostle is speaking in the passage quoted.

Reply to Objection 2. The apostles were instructed immediately by the Word of God, not according to His Divinity, but according as He spoke in His human nature. Hence the argument does not prove.

Reply to Objection 3. Certain men in this state of life are greater than certain angels, not actually, but virtually; forasmuch as they have such great charity that they can merit a higher degree of beatitude than that possessed by certain angels. In the same way we might say that the seed of a great tree is virtually greater than a small tree, though actually it is much smaller.

Objection 1. It would seem that man by the power of his soul can change corporeal matter. For Gregory says (*Dialog.* ii, 30): “Saints work miracles sometimes by prayer, sometimes by their power: thus Peter, by prayer, raised the dead Tabitha to life, and by his reproof delivered to death the lying Ananias and Saphira.” But in the working of miracles a change is wrought in corporeal matter. Therefore men, by the power of the soul, can change corporeal matter.

Objection 2. Further, on these words (*Gal.* 3:1): “Who hath bewitched you, that you should not obey the truth?” the gloss says that “some have blazing eyes, who by a single look bewitch others, especially children.” But this would not be unless the power of the soul could change corporeal matter. Therefore man can change corporeal matter by the power of his soul.

Objection 3. Further, the human body is nobler than other inferior bodies. But by the apprehension of the human soul the human body is changed to heat and cold, as appears when a man is angry or afraid: indeed this change sometimes goes so far as to bring on sickness and death. Much more, then, can the human soul by its power change corporeal matter.

On the contrary, Augustine says (*De Trin.* iii, 8): “Corporeal matter obeys God alone at will.”

I answer that, As stated above (q. 110, a. 2), corporeal matter is not changed to (the reception of) a form save either by some agent composed of matter and form, or by God Himself, in whom both matter and form pre-exist virtually, as in the primordial cause of both. Wherefore of the angels also we have stated (q. 110, a. 2) that they cannot change corporeal matter by their natural power, except by employing corporeal agents for the production of certain effects. Much less therefore can the soul, by its natural power, change corporeal matter, except by means of bodies.

Reply to Objection 1. The saints are said to work miracles by the power of grace, not of nature. This is clear from what Gregory says in the same place: “Those

who are sons of God, in power, as John says—what wonder is there that they should work miracles by that power?”

Reply to Objection 2. Avicenna assigns the cause of bewitchment to the fact that corporeal matter has a natural tendency to obey spiritual substance rather than natural contrary agents. Therefore when the soul is of strong imagination, it can change corporeal matter. This he says is the cause of the “evil eye.”

But it has been shown above (q. 110, a. 2) that corporeal matter does not obey spiritual substances at will, but the Creator alone. Therefore it is better to say, that by a strong imagination the (corporeal) spirits of the body united to that soul are changed, which change in the spirits takes place especially in the eyes, to which the more subtle spirits can reach. And the eyes infect the air which is in contact with them to a certain distance: in the same way as a new and clear mirror contracts a tarnish from the look of a “menstruata,” as Aristotle says (*De Somn. et Vigil.*;*).

Hence then when a soul is vehemently moved to wickedness, as occurs mostly in little old women, according to the above explanation, the countenance becomes venomous and hurtful, especially to children, who have a tender and most impressionable body. It is also possible that by God’s permission, or from some hidden deed, the spiteful demons co-operate in this, as the witches may have some compact with them.

Reply to Objection 3. The soul is united to the body as its form; and the sensitive appetite, which obeys the reason in a certain way, as stated above (q. 81, a. 3), it is the act of a corporeal organ. Therefore at the apprehension of the human soul, the sensitive appetite must needs be moved with an accompanying corporeal operation. But the apprehension of the human soul does not suffice to work a change in exterior bodies, except by means of a change in the body united to it, as stated above (ad 2).

* *De Insomniis* ii

Objection 1. It seems that the separate human soul can move bodies at least locally. For a body naturally obeys a spiritual substance as to local motion, as stated above (q. 110, a. 5). But the separate soul is a spiritual substance. Therefore it can move exterior bodies by its command.

Objection 2. Further, in the Itinerary of Clement it is said in the narrative of Nicetas to Peter, that Simon Magus, by sorcery retained power over the soul of a child that he had slain, and that through this soul he worked magical wonders. But this could not have been without some corporeal change at least as to place. Therefore, the separate soul has the power to move bodies locally.

On the contrary, the Philosopher says (De Anima i, 3) that the soul cannot move any other body whatsoever but its own.

I answer that, The separate soul cannot by its natural power move a body. For it is manifest that, even while the soul is united to the body, it does not move the body except as endowed with life: so that if one of the members become lifeless, it does not obey the soul as to local motion. Now it is also manifest that no body is quickened by the separate soul. Therefore within the

limits of its natural power the separate soul cannot command the obedience of a body; though, by the power of God, it can exceed those limits.

Reply to Objection 1. There are certain spiritual substances whose powers are not determinate to certain bodies; such are the angels who are naturally unfettered by a body; consequently various bodies may obey them as to movement. But if the motive power of a separate substance is naturally determinate to move a certain body, that substance will not be able to move a body of higher degree, but only one of lower degree: thus according to philosophers the mover of the lower heaven cannot move the higher heaven. Wherefore, since the soul is by its nature determinate to move the body of which it is the form, it cannot by its natural power move any other body.

Reply to Objection 2. As Augustine (De Civ. Dei x, 11) and Chrysostom (Hom. xxviii in Matt.) say, the demons often pretend to be the souls of the dead, in order to confirm the error of heathen superstition. It is therefore credible that Simon Magus was deceived by some demon who pretended to be the soul of the child whom the magician had slain.

FIRST PART, QUESTION 118

Of the Production of Man From Man As to the Soul (In Three Articles)

We next consider the production of man from man: first, as to the soul; secondly, as to the body. Under the first head there are three points of inquiry:

- (1) Whether the sensitive soul is transmitted with the semen?
- (2) Whether the intellectual soul is thus transmitted?
- (3) Whether all souls were created at the same time?

Whether the sensitive soul is transmitted with the semen?

Ia q. 118 a. 1

Objection 1. It would seem that the sensitive soul is not transmitted with the semen, but created by God. For every perfect substance, not composed of matter and form, that begins to exist, acquires existence not by generation, but by creation: for nothing is generated save from matter. But the sensitive soul is a perfect substance, otherwise it could not move the body; and since it is the form of a body, it is not composed of matter and form. Therefore it begins to exist not by generation but by creation.

Objection 2. Further, in living things the principle of generation is the generating power; which, since it is one of the powers of the vegetative soul, is of a lower order than the sensitive soul. Now nothing acts beyond its species. Therefore the sensitive soul cannot be caused by the animal's generating power.

Objection 3. Further, the generator begets its like: so that the form of the generator must be actually in the cause of generation. But neither the sensitive soul itself nor any part thereof is actually in the semen, for no part of the sensitive soul is elsewhere than in some part of the body; while in the semen there is not even a particle of the body, because there is not a particle of the body which is not made from the semen and by the power thereof. Therefore the sensitive soul is not produced through the semen.

Objection 4. Further, if there be in the semen any principle productive of the sensitive soul, this principle either remains after the animal is begotten, or it does not remain. Now it cannot remain. For either it would be identified with the sensitive soul of the begotten animal; which is impossible, for thus there would be identity between begetter and begotten, maker and made: or it would be distinct therefrom; and again this is impossible, for it has been proved above (q. 76, a. 4) that in one animal there is but one formal principle, which is the soul. If on the other hand the aforesaid principle does not remain, this again seems to be impossible: for thus an agent would act to its own destruction, which cannot be. Therefore the sensitive soul cannot be generated from the semen.

On the contrary, The power in the semen is to the animal seminally generated, as the power in the elements of the world is to animals produced from these

elements—for instance by putrefaction. But in the latter animals the soul is produced by the elemental power, according to Gn. 1:20: "Let the waters bring forth the creeping creatures having life." Therefore also the souls of animals seminally generated are produced by the seminal power.

I answer that, Some have held that the sensitive souls of animals are created by God (q. 65, a. 4). This opinion would hold if the sensitive soul were subsistent, having being and operation of itself. For thus, as having being and operation of itself, to be made would need be proper to it. And since a simple and subsistent thing cannot be made except by creation, it would follow that the sensitive soul would arrive at existence by creation.

But this principle is false—namely, that being and operation are proper to the sensitive soul, as has been made clear above (q. 75, a. 3): for it would not cease to exist when the body perishes. Since, therefore, it is not a subsistent form, its relation to existence is that of the corporeal forms, to which existence does not belong as proper to them, but which are said to exist inasmuch as the subsistent composites exist through them.

Wherefore to be made is proper to composites. And since the generator is like the generated, it follows of necessity that both the sensitive soul, and all other like forms are naturally brought into existence by certain corporeal agents that reduce the matter from potentiality to act, through some corporeal power of which they are possessed.

Now the more powerful an agent, the greater scope its action has: for instance, the hotter a body, the greater the distance to which its heat carries. Therefore bodies not endowed with life, which are the lowest in the order of nature, generate their like, not through some medium, but by themselves; thus fire by itself generates fire. But living bodies, as being more powerful, act so as to generate their like, both without and with a medium. Without a medium—in the work of nutrition, in which flesh generates flesh: with a medium—in the act of generation, because the semen of the animal or plant derives a certain active force from the soul of the generator, just as the instrument derives a certain motive power from the principal agent. And as it matters not whether we say that something is moved by the instrument or by the

principal agent, so neither does it matter whether we say that the soul of the generated is caused by the soul of the generator, or by some seminal power derived therefrom.

Reply to Objection 1. The sensitive soul is not a perfect self-subsistent substance. We have said enough (q. 25, a. 3) on this point, nor need we repeat it here.

Reply to Objection 2. The generating power begets not only by its own virtue but by that of the whole soul, of which it is a power. Therefore the generating power of a plant generates a plant, and that of an animal begets an animal. For the more perfect the soul is, to so much a more perfect effect is its generating power ordained.

Reply to Objection 3. This active force which is in the semen, and which is derived from the soul of the generator, is, as it were, a certain movement of this soul itself: nor is it the soul or a part of the soul, save virtually; thus the form of a bed is not in the saw or the axe, but a certain movement towards that form. Consequently there is no need for this active force to have an actual organ; but it is based on the (vital) spirit in the semen which is frothy, as is attested by its whiteness. In which spirit, moreover, there is a certain heat derived from the power of the heavenly bodies, by virtue of which the inferior bodies also act towards the production of the species as stated above (q. 115, a. 3, ad 2). And since in this (vital) spirit the power of the soul is concurrent with the power of a heavenly body, it has been said that “man and the sun generate man.” Moreover, elemental heat is employed instrumentally by the

soul’s power, as also by the nutritive power, as stated (De Anima ii, 4).

Reply to Objection 4. In perfect animals, generated by coition, the active force is in the semen of the male, as the Philosopher says (De Gener. Animal. ii, 3); but the foetal matter is provided by the female. In this matter, the vegetative soul exists from the very beginning, not as to the second act, but as to the first act, as the sensitive soul is in one who sleeps. But as soon as it begins to attract nourishment, then it already operates in act. This matter therefore is transmuted by the power which is in the semen of the male, until it is actually informed by the sensitive soul; not as though the force itself which was in the semen becomes the sensitive soul; for thus, indeed, the generator and generated would be identical; moreover, this would be more like nourishment and growth than generation, as the Philosopher says. And after the sensitive soul, by the power of the active principle in the semen, has been produced in one of the principal parts of the thing generated, then it is that the sensitive soul of the offspring begins to work towards the perfection of its own body, by nourishment and growth. As to the active power which was in the semen, it ceases to exist, when the semen is dissolved and the (vital) spirit thereof vanishes. Nor is there anything unreasonable in this, because this force is not the principal but the instrumental agent; and the movement of an instrument ceases when once the effect has been produced.

Whether the intellectual soul is produced from the semen?

Ia q. 118 a. 2

Objection 1. It would seem that the intellectual soul is produced from the semen. For it is written (Gn. 46:26): “All the souls that came out of [Jacob’s] thigh, sixty-six.” But nothing is produced from the thigh of a man, except from the semen. Therefore the intellectual soul is produced from the semen.

Objection 2. Further, as shown above (q. 76, a. 3), the intellectual, sensitive, and nutritive souls are, in substance, one soul in man. But the sensitive soul in man is generated from the semen, as in other animals; wherefore the Philosopher says (De Gener. Animal. ii, 3) that the animal and the man are not made at the same time, but first of all the animal is made having a sensitive soul. Therefore also the intellectual soul is produced from the semen.

Objection 3. Further, it is one and the same agent whose action is directed to the matter and to the form: else from the matter and the form there would not result something simply one. But the intellectual soul is the form of the human body, which is produced by the power of the semen. Therefore the intellectual soul also is produced by the power of the semen.

Objection 4. Further, man begets his like in species. But the human species is constituted by the rational soul. Therefore the rational soul is from the begetter.

Objection 5. Further, it cannot be said that God concurs in sin. But if the rational soul be created by God, sometimes God concurs in the sin of adultery, since sometimes offspring is begotten of illicit intercourse. Therefore the rational soul is not created by God.

On the contrary, It is written in De Eccl. Dogmat. xiv that “the rational soul is not engendered by coition.”

I answer that, It is impossible for an active power existing in matter to extend its action to the production of an immaterial effect. Now it is manifest that the intellectual principle in man transcends matter; for it has an operation in which the body takes no part whatever. It is therefore impossible for the seminal power to produce the intellectual principle.

Again, the seminal power acts by virtue of the soul of the begetter according as the soul of the begetter is the act of the body, making use of the body in its operation. Now the body has nothing whatever to do in the operation of the intellect. Therefore the power of the intellectual principle, as intellectual, cannot reach the semen. Hence the Philosopher says (De Gener. Animal. ii, 3): “It follows that the intellect alone comes from without.”

Again, since the intellectual soul has an operation

independent of the body, it is subsistent, as proved above (q. 75, a. 2): therefore to be and to be made are proper to it. Moreover, since it is an immaterial substance it cannot be caused through generation, but only through creation by God. Therefore to hold that the intellectual soul is caused by the begetter, is nothing else than to hold the soul to be non-subsistent and consequently to perish with the body. It is therefore heretical to say that the intellectual soul is transmitted with the semen.

Reply to Objection 1. In the passage quoted, the part is put instead of the whole, the soul for the whole man, by the figure of synecdoche.

Reply to Objection 2. Some say that the vital functions observed in the embryo are not from its soul, but from the soul of the mother; or from the formative power of the semen. Both of these explanations are false; for vital functions such as feeling, nourishment, and growth cannot be from an extrinsic principle. Consequently it must be said that the soul is in the embryo; the nutritive soul from the beginning, then the sensitive, lastly the intellectual soul.

Therefore some say that in addition to the vegetative soul which existed first, another, namely the sensitive, soul supervenes; and in addition to this, again another, namely the intellectual soul. Thus there would be in man three souls of which one would be in potentiality to another. This has been disproved above (q. 76, a. 3).

Therefore others say that the same soul which was at first merely vegetative, afterwards through the action of the seminal power, becomes a sensitive soul; and finally this same soul becomes intellectual, not indeed through the active seminal power, but by the power of a higher agent, namely God enlightening (the soul) from without. For this reason the Philosopher says that the intellect comes from without. But this will not hold. First, because no substantial form is susceptible of more or less; but addition of greater perfection constitutes another species, just as the addition of unity constitutes another species of number. Now it is not possible for the same identical form to belong to different species. Secondly, because it would follow that the generation of an animal would be a continuous movement, proceeding gradually from the imperfect to the perfect, as happens in alteration. Thirdly, because it would follow that the generation of a man or an animal is not generation simply, because the subject thereof would be a being in act. For if the vegetative soul is from the beginning in the matter of offspring, and is subsequently gradually brought to perfection; this will imply addition of fur-

ther perfection without corruption of the preceding perfection. And this is contrary to the nature of generation properly so called. Fourthly, because either that which is caused by the action of God is something subsistent; and thus it must needs be essentially distinct from the pre-existing form, which was non-subsistent; and we shall then come back to the opinion of those who held the existence of several souls in the body—or else it is not subsistent, but a perfection of the pre-existing soul; and from this it follows of necessity that the intellectual soul perishes with the body, which cannot be admitted.

There is again another explanation, according to those who held that all men have but one intellect in common: but this has been disproved above (q. 76, a. 2).

We must therefore say that since the generation of one thing is the corruption of another, it follows of necessity that both in men and in other animals, when a more perfect form supervenes the previous form is corrupted: yet so that the supervening form contains the perfection of the previous form, and something in addition. It is in this way that through many generations and corruptions we arrive at the ultimate substantial form, both in man and other animals. This indeed is apparent to the senses in animals generated from putrefaction. We conclude therefore that the intellectual soul is created by God at the end of human generation, and this soul is at the same time sensitive and nutritive, the pre-existing forms being corrupted.

Reply to Objection 3. This argument holds in the case of diverse agents not ordered to one another. But where there are many agents ordered to one another, nothing hinders the power of the higher agent from reaching to the ultimate form; while the powers of the inferior agents extend only to some disposition of matter: thus in the generation of an animal, the seminal power disposes the matter, but the power of the soul gives the form. Now it is manifest from what has been said above (q. 105, a. 5; q. 110, a. 1) that the whole of corporeal nature acts as the instrument of a spiritual power, especially of God. Therefore nothing hinders the formation of the body from being due to a corporeal power, while the intellectual soul is from God alone.

Reply to Objection 4. Man begets his like, forasmuch as by his seminal power the matter is disposed for the reception of a certain species of form.

Reply to Objection 5. In the action of the adulterer, what is of nature is good; in this God concurs. But what there is of inordinate lust is evil; in this God does not concur.

Whether human souls were created together at the beginning of the world?

Ia q. 118 a. 3

Objection 1. It would seem that human souls were created together at the beginning of the world. For it is written (Gn. 2:2): “God rested Him from all His work which He had done.” This would not be true if He cre-

ated new souls every day. Therefore all souls were created at the same time.

Objection 2. Further, spiritual substances before all others belong to the perfection of the universe. If there-

fore souls were created with the bodies, every day innumerable spiritual substances would be added to the perfection of the universe: consequently at the beginning the universe would have been imperfect. This is contrary to Gn. 2:2, where it is said that “God ended” all “His work.”

Objection 3. Further, the end of a thing corresponds to its beginning. But the intellectual soul remains, when the body perishes. Therefore it began to exist before the body.

On the contrary, It is said (De Eccl. Dogmat. xiv, xviii) that “the soul is created together with the body.”

I answer that, Some have maintained that it is accidental to the intellectual soul to be united to the body, asserting that the soul is of the same nature as those spiritual substances which are not united to a body. These, therefore, stated that the souls of men were created together with the angels at the beginning. But this statement is false. Firstly, in the very principle on which it is based. For if it were accidental to the soul to be united to the body, it would follow that man who results from this union is a being by accident; or that the soul is a man, which is false, as proved above (q. 75, a. 4). Moreover, that the human soul is not of the same nature as the angels, is proved from the different mode of understanding, as shown above (q. 55, a. 2; q. 85, a. 1): for man understands through receiving from the senses, and turning to phantasms, as stated above (q. 84, Aa. 6,7; q. 85, a. 1). For this reason the soul needs to be united to the body, which is necessary to it for the operation of the sensitive part: whereas this cannot be said of an angel.

Secondly, this statement can be proved to be false in itself. For if it is natural to the soul to be united to the body, it is unnatural to it to be without a body, and as long as it is without a body it is deprived of its natural perfection. Now it was not fitting that God should begin His work with things imperfect and unnatural, for He did not make man without a hand or a foot, which are natural parts of a man. Much less, therefore, did He make the soul without a body.

But if someone say that it is not natural to the soul to be united to the body, he must give the reason why it is

united to a body. And the reason must be either because the soul so willed, or for some other reason. If because the soul willed it—this seems incongruous. First, because it would be unreasonable of the soul to wish to be united to the body, if it did not need the body: for if it did need it, it would be natural for it to be united to it, since “nature does not fail in what is necessary.” Secondly, because there would be no reason why, having been created from the beginning of the world, the soul should, after such a long time, come to wish to be united to the body. For a spiritual substance is above time, and superior to the heavenly revolutions. Thirdly, because it would seem that this body was united to this soul by chance: since for this union to take place two wills would have to concur—to wit, that of the incoming soul, and that of the begetter. If, however, this union be neither voluntary nor natural on the part of the soul, then it must be the result of some violent cause, and to the soul would have something of a penal and afflicting nature. This is in keeping with the opinion of Origen, who held that souls were embodied in punishment of sin. Since, therefore, all these opinions are unreasonable, we must simply confess that souls were not created before bodies, but are created at the same time as they are infused into them.

Reply to Objection 1. God is said to have rested on the seventh day, not from all work, since we read (Jn. 5:17): “My Father worketh until now”; but from the creation of any new genera and species, which may not have already existed in the first works. For in this sense, the souls which are created now, existed already, as to the likeness of the species, in the first works, which included the creation of Adam’s soul.

Reply to Objection 2. Something can be added every day to the perfection of the universe, as to the number of individuals, but not as to the number of species.

Reply to Objection 3. That the soul remains without the body is due to the corruption of the body, which was a result of sin. Consequently it was not fitting that God should make the soul without the body from the beginning: for as it is written (Wis. 1:13,16): “God made not death. . . but the wicked with works and words have called it to them.”

Objection 1. It would seem that the sensitive soul is not transmitted with the semen, but created by God. For every perfect substance, not composed of matter and form, that begins to exist, acquires existence not by generation, but by creation: for nothing is generated save from matter. But the sensitive soul is a perfect substance, otherwise it could not move the body; and since it is the form of a body, it is not composed of matter and form. Therefore it begins to exist not by generation but by creation.

Objection 2. Further, in living things the principle of generation is the generating power; which, since it is one of the powers of the vegetative soul, is of a lower order than the sensitive soul. Now nothing acts beyond its species. Therefore the sensitive soul cannot be caused by the animal's generating power.

Objection 3. Further, the generator begets its like: so that the form of the generator must be actually in the cause of generation. But neither the sensitive soul itself nor any part thereof is actually in the semen, for no part of the sensitive soul is elsewhere than in some part of the body; while in the semen there is not even a particle of the body, because there is not a particle of the body which is not made from the semen and by the power thereof. Therefore the sensitive soul is not produced through the semen.

Objection 4. Further, if there be in the semen any principle productive of the sensitive soul, this principle either remains after the animal is begotten, or it does not remain. Now it cannot remain. For either it would be identified with the sensitive soul of the begotten animal; which is impossible, for thus there would be identity between begetter and begotten, maker and made: or it would be distinct therefrom; and again this is impossible, for it has been proved above (q. 76, a. 4) that in one animal there is but one formal principle, which is the soul. If on the other hand the aforesaid principle does not remain, this again seems to be impossible: for thus an agent would act to its own destruction, which cannot be. Therefore the sensitive soul cannot be generated from the semen.

On the contrary, The power in the semen is to the animal seminally generated, as the power in the elements of the world is to animals produced from these elements—for instance by putrefaction. But in the latter animals the soul is produced by the elemental power, according to Gn. 1:20: "Let the waters bring forth the creeping creatures having life." Therefore also the souls of animals seminally generated are produced by the seminal power.

I answer that, Some have held that the sensitive souls of animals are created by God (q. 65, a. 4). This opinion would hold if the sensitive soul were subsistent, having being and operation of itself. For thus, as having being and operation of itself, to be made would needs be proper to it. And since a simple and subsistent thing

cannot be made except by creation, it would follow that the sensitive soul would arrive at existence by creation.

But this principle is false—namely, that being and operation are proper to the sensitive soul, as has been made clear above (q. 75, a. 3): for it would not cease to exist when the body perishes. Since, therefore, it is not a subsistent form, its relation to existence is that of the corporeal forms, to which existence does not belong as proper to them, but which are said to exist forasmuch as the subsistent composites exist through them.

Wherefore to be made is proper to composites. And since the generator is like the generated, it follows of necessity that both the sensitive soul, and all other like forms are naturally brought into existence by certain corporeal agents that reduce the matter from potentiality to act, through some corporeal power of which they are possessed.

Now the more powerful an agent, the greater scope its action has: for instance, the hotter a body, the greater the distance to which its heat carries. Therefore bodies not endowed with life, which are the lowest in the order of nature, generate their like, not through some medium, but by themselves; thus fire by itself generates fire. But living bodies, as being more powerful, act so as to generate their like, both without and with a medium. Without a medium—in the work of nutrition, in which flesh generates flesh: with a medium—in the act of generation, because the semen of the animal or plant derives a certain active force from the soul of the generator, just as the instrument derives a certain motive power from the principal agent. And as it matters not whether we say that something is moved by the instrument or by the principal agent, so neither does it matter whether we say that the soul of the generated is caused by the soul of the generator, or by some seminal power derived therefrom.

Reply to Objection 1. The sensitive soul is not a perfect self-subsistent substance. We have said enough (q. 25, a. 3) on this point, nor need we repeat it here.

Reply to Objection 2. The generating power begets not only by its own virtue but by that of the whole soul, of which it is a power. Therefore the generating power of a plant generates a plant, and that of an animal begets an animal. For the more perfect the soul is, to so much a more perfect effect is its generating power ordained.

Reply to Objection 3. This active force which is in the semen, and which is derived from the soul of the generator, is, as it were, a certain movement of this soul itself: nor is it the soul or a part of the soul, save virtually; thus the form of a bed is not in the saw or the axe, but a certain movement towards that form. Consequently there is no need for this active force to have an actual organ; but it is based on the (vital) spirit in the semen which is frothy, as is attested by its whiteness. In which spirit, moreover, there is a certain heat derived from the power of the heavenly bodies, by virtue of which the inferior bodies also act towards the produc-

tion of the species as stated above (q. 115, a. 3, ad 2). And since in this (vital) spirit the power of the soul is concurrent with the power of a heavenly body, it has been said that “man and the sun generate man.” Moreover, elemental heat is employed instrumentally by the soul’s power, as also by the nutritive power, as stated (De Anima ii, 4).

Reply to Objection 4. In perfect animals, generated by coition, the active force is in the semen of the male, as the Philosopher says (De Gener. Animal. ii, 3); but the foetal matter is provided by the female. In this matter, the vegetative soul exists from the very beginning, not as to the second act, but as to the first act, as the sensitive soul is in one who sleeps. But as soon as it begins to attract nourishment, then it already operates in act. This matter therefore is transmuted by the power which is in the semen of the male, until it is actually in-

formed by the sensitive soul; not as though the force itself which was in the semen becomes the sensitive soul; for thus, indeed, the generator and generated would be identical; moreover, this would be more like nourishment and growth than generation, as the Philosopher says. And after the sensitive soul, by the power of the active principle in the semen, has been produced in one of the principal parts of the thing generated, then it is that the sensitive soul of the offspring begins to work towards the perfection of its own body, by nourishment and growth. As to the active power which was in the semen, it ceases to exist, when the semen is dissolved and the (vital) spirit thereof vanishes. Nor is there anything unreasonable in this, because this force is not the principal but the instrumental agent; and the movement of an instrument ceases when once the effect has been produced.

Objection 1. It would seem that the intellectual soul is produced from the semen. For it is written (Gn. 46:26): “All the souls that came out of [Jacob’s] thigh, sixty-six.” But nothing is produced from the thigh of a man, except from the semen. Therefore the intellectual soul is produced from the semen.

Objection 2. Further, as shown above (q. 76, a. 3), the intellectual, sensitive, and nutritive souls are, in substance, one soul in man. But the sensitive soul in man is generated from the semen, as in other animals; wherefore the Philosopher says (*De Gener. Animal.* ii, 3) that the animal and the man are not made at the same time, but first of all the animal is made having a sensitive soul. Therefore also the intellectual soul is produced from the semen.

Objection 3. Further, it is one and the same agent whose action is directed to the matter and to the form: else from the matter and the form there would not result something simply one. But the intellectual soul is the form of the human body, which is produced by the power of the semen. Therefore the intellectual soul also is produced by the power of the semen.

Objection 4. Further, man begets his like in species. But the human species is constituted by the rational soul. Therefore the rational soul is from the begetter.

Objection 5. Further, it cannot be said that God concurs in sin. But if the rational soul be created by God, sometimes God concurs in the sin of adultery, since sometimes offspring is begotten of illicit intercourse. Therefore the rational soul is not created by God.

On the contrary, It is written in *De Eccl. Dogmat.* xiv that “the rational soul is not engendered by coition.”

I answer that, It is impossible for an active power existing in matter to extend its action to the production of an immaterial effect. Now it is manifest that the intellectual principle in man transcends matter; for it has an operation in which the body takes no part whatever. It is therefore impossible for the seminal power to produce the intellectual principle.

Again, the seminal power acts by virtue of the soul of the begetter according as the soul of the begetter is the act of the body, making use of the body in its operation. Now the body has nothing whatever to do in the operation of the intellect. Therefore the power of the intellectual principle, as intellectual, cannot reach the semen. Hence the Philosopher says (*De Gener. Animal.* ii, 3): “It follows that the intellect alone comes from without.”

Again, since the intellectual soul has an operation independent of the body, it is subsistent, as proved above (q. 75, a. 2): therefore to be and to be made are proper to it. Moreover, since it is an immaterial substance it cannot be caused through generation, but only through creation by God. Therefore to hold that the intellectual soul is caused by the begetter, is nothing else

than to hold the soul to be non-subsistent and consequently to perish with the body. It is therefore heretical to say that the intellectual soul is transmitted with the semen.

Reply to Objection 1. In the passage quoted, the part is put instead of the whole, the soul for the whole man, by the figure of synecdoche.

Reply to Objection 2. Some say that the vital functions observed in the embryo are not from its soul, but from the soul of the mother; or from the formative power of the semen. Both of these explanations are false; for vital functions such as feeling, nourishment, and growth cannot be from an extrinsic principle. Consequently it must be said that the soul is in the embryo; the nutritive soul from the beginning, then the sensitive, lastly the intellectual soul.

Therefore some say that in addition to the vegetative soul which existed first, another, namely the sensitive, soul supervenes; and in addition to this, again another, namely the intellectual soul. Thus there would be in man three souls of which one would be in potentiality to another. This has been disproved above (q. 76, a. 3).

Therefore others say that the same soul which was at first merely vegetative, afterwards through the action of the seminal power, becomes a sensitive soul; and finally this same soul becomes intellectual, not indeed through the active seminal power, but by the power of a higher agent, namely God enlightening (the soul) from without. For this reason the Philosopher says that the intellect comes from without. But this will not hold. First, because no substantial form is susceptible of more or less; but addition of greater perfection constitutes another species, just as the addition of unity constitutes another species of number. Now it is not possible for the same identical form to belong to different species. Secondly, because it would follow that the generation of an animal would be a continuous movement, proceeding gradually from the imperfect to the perfect, as happens in alteration. Thirdly, because it would follow that the generation of a man or an animal is not generation simply, because the subject thereof would be a being in act. For if the vegetative soul is from the beginning in the matter of offspring, and is subsequently gradually brought to perfection; this will imply addition of further perfection without corruption of the preceding perfection. And this is contrary to the nature of generation properly so called. Fourthly, because either that which is caused by the action of God is something subsistent: and thus it must needs be essentially distinct from the pre-existing form, which was non-subsistent; and we shall then come back to the opinion of those who held the existence of several souls in the body—or else it is not subsistent, but a perfection of the pre-existing soul: and from this it follows of necessity that the intellectual soul perishes with the body, which cannot be admitted.

There is again another explanation, according to

those who held that all men have but one intellect in common: but this has been disproved above (q. 76, a. 2).

We must therefore say that since the generation of one thing is the corruption of another, it follows of necessity that both in men and in other animals, when a more perfect form supervenes the previous form is corrupted: yet so that the supervening form contains the perfection of the previous form, and something in addition. It is in this way that through many generations and corruptions we arrive at the ultimate substantial form, both in man and other animals. This indeed is apparent to the senses in animals generated from putrefaction. We conclude therefore that the intellectual soul is created by God at the end of human generation, and this soul is at the same time sensitive and nutritive, the pre-existing forms being corrupted.

Reply to Objection 3. This argument holds in the case of diverse agents not ordered to one another. But where there are many agents ordered to one another,

nothing hinders the power of the higher agent from reaching to the ultimate form; while the powers of the inferior agents extend only to some disposition of matter: thus in the generation of an animal, the seminal power disposes the matter, but the power of the soul gives the form. Now it is manifest from what has been said above (q. 105, a. 5; q. 110, a. 1) that the whole of corporeal nature acts as the instrument of a spiritual power, especially of God. Therefore nothing hinders the formation of the body from being due to a corporeal power, while the intellectual soul is from God alone.

Reply to Objection 4. Man begets his like, forasmuch as by his seminal power the matter is disposed for the reception of a certain species of form.

Reply to Objection 5. In the action of the adulterer, what is of nature is good; in this God concurs. But what there is of inordinate lust is evil; in this God does not concur.

Objection 1. It would seem that human souls were created together at the beginning of the world. For it is written (Gn. 2:2): “God rested Him from all His work which He had done.” This would not be true if He created new souls every day. Therefore all souls were created at the same time.

Objection 2. Further, spiritual substances before all others belong to the perfection of the universe. If therefore souls were created with the bodies, every day innumerable spiritual substances would be added to the perfection of the universe: consequently at the beginning the universe would have been imperfect. This is contrary to Gn. 2:2, where it is said that “God ended” all “His work.”

Objection 3. Further, the end of a thing corresponds to its beginning. But the intellectual soul remains, when the body perishes. Therefore it began to exist before the body.

On the contrary, It is said (De Eccl. Dogmat. xiv, xviii) that “the soul is created together with the body.”

I answer that, Some have maintained that it is accidental to the intellectual soul to be united to the body, asserting that the soul is of the same nature as those spiritual substances which are not united to a body. These, therefore, stated that the souls of men were created together with the angels at the beginning. But this statement is false. Firstly, in the very principle on which it is based. For if it were accidental to the soul to be united to the body, it would follow that man who results from this union is a being by accident; or that the soul is a man, which is false, as proved above (q. 75, a. 4). Moreover, that the human soul is not of the same nature as the angels, is proved from the different mode of understanding, as shown above (q. 55, a. 2; q. 85, a. 1): for man understands through receiving from the senses, and turning to phantasms, as stated above (q. 84, Aa. 6,7; q. 85, a. 1). For this reason the soul needs to be united to the body, which is necessary to it for the operation of the sensitive part: whereas this cannot be said of an angel.

Secondly, this statement can be proved to be false in itself. For if it is natural to the soul to be united to the body, it is unnatural to it to be without a body, and as long as it is without a body it is deprived of its natural perfection. Now it was not fitting that God should begin His work with things imperfect and unnatural, for He did not make man without a hand or a foot, which

are natural parts of a man. Much less, therefore, did He make the soul without a body.

But if someone say that it is not natural to the soul to be united to the body, he must give the reason why it is united to a body. And the reason must be either because the soul so willed, or for some other reason. If because the soul willed it—this seems incongruous. First, because it would be unreasonable of the soul to wish to be united to the body, if it did not need the body: for if it did need it, it would be natural for it to be united to it, since “nature does not fail in what is necessary.” Secondly, because there would be no reason why, having been created from the beginning of the world, the soul should, after such a long time, come to wish to be united to the body. For a spiritual substance is above time, and superior to the heavenly revolutions. Thirdly, because it would seem that this body was united to this soul by chance: since for this union to take place two wills would have to concur—to wit, that of the incoming soul, and that of the begetter. If, however, this union be neither voluntary nor natural on the part of the soul, then it must be the result of some violent cause, and to the soul would have something of a penal and afflicting nature. This is in keeping with the opinion of Origen, who held that souls were embodied in punishment of sin. Since, therefore, all these opinions are unreasonable, we must simply confess that souls were not created before bodies, but are created at the same time as they are infused into them.

Reply to Objection 1. God is said to have rested on the seventh day, not from all work, since we read (Jn. 5:17): “My Father worketh until now”; but from the creation of any new genera and species, which may not have already existed in the first works. For in this sense, the souls which are created now, existed already, as to the likeness of the species, in the first works, which included the creation of Adam’s soul.

Reply to Objection 2. Something can be added every day to the perfection of the universe, as to the number of individuals, but not as to the number of species.

Reply to Objection 3. That the soul remains without the body is due to the corruption of the body, which was a result of sin. Consequently it was not fitting that God should make the soul without the body from the beginning: for as it is written (Wis. 1:13,16): “God made not death. . . but the wicked with works and words have called it to them.”

FIRST PART, QUESTION 119
Of the Propagation of Man As to the Body
(In Two Articles)

We now consider the propagation of man, as to the body. Concerning this there are two points of inquiry:

- (1) Whether any part of the food is changed into true human nature?
- (2) Whether the semen, which is the principle of human generation, is produced from the surplus food?

Whether some part of the food is changed into true human nature?

Ia q. 119 a. 1

Objection 1. It would seem that none of the food is changed into true human nature. For it is written (Mat. 15:17): “Whatsoever entereth into the mouth, goeth into the belly, and is cast out into the privy.” But what is cast out is not changed into the reality of human nature. Therefore none of the food is changed into true human nature.

Objection 2. Further, the Philosopher (De Gener. i, 5) distinguishes flesh belonging to the “species” from flesh belonging to “matter”; and says that the latter “comes and goes.” Now what is formed from food comes and goes. Therefore what is produced from food is flesh belonging to matter, not to the species. But what belongs to true human nature belongs to the species. Therefore the food is not changed into true human nature.

Objection 3. Further, the “radical humor” seems to belong to the reality of human nature; and if it be lost, it cannot be recovered, according to physicians. But it could be recovered if the food were changed into the humor. Therefore food is not changed into true human nature.

Objection 4. Further, if the food were changed into true human nature, whatever is lost in man could be restored. But man’s death is due only to the loss of something. Therefore man would be able by taking food to insure himself against death in perpetuity.

Objection 5. Further, if the food is changed into true human nature, there is nothing in man which may not recede or be repaired: for what is generated in a man from his food can both recede and be repaired. If therefore a man lived long enough, it would follow that in the end nothing would be left in him of what belonged to him at the beginning. Consequently he would not be numerically the same man throughout his life; since for the thing to be numerically the same, identity of matter is necessary. But this is incongruous. Therefore the food is not changed into true human nature.

On the contrary, Augustine says (De Vera Relig. xi): “The bodily food when corrupted, that is, having lost its form, is changed into the texture of the members.” But the texture of the members belongs to true human nature. Therefore the food is changed into the reality of human nature.

I answer that, According to the Philosopher

(Metaph. ii), “The relation of a thing to truth is the same as its relation to being.” Therefore that belongs to the true nature of any thing which enters into the constitution of that nature. But nature can be considered in two ways: firstly, in general according to the species; secondly, as in the individual. And whereas the form and the common matter belong to a thing’s true nature considered in general; individual signate matter, and the form individualized by that matter belong to the true nature considered in this particular individual. Thus a soul and body belong to the true human nature in general, but to the true human nature of Peter and Martin belong this soul and this body.

Now there are certain things whose form cannot exist but in one individual matter: thus the form of the sun cannot exist save in the matter in which it actually is. And in this sense some have said that the human form cannot exist but in a certain individual matter, which, they said, was given that form at the very beginning in the first man. So that whatever may have been added to that which was derived by posterity from the first parent, does not belong to the truth of human nature, as not receiving in truth the form of human nature.

But, said they, that matter which, in the first man, was the subject of the human form, was multiplied in itself: and in this way the multitude of human bodies is derived from the body of the first man. According to these, the food is not changed into true human nature; we take food, they stated, in order to help nature to resist the action of natural heat, and prevent the consumption of the “radical humor”; just as lead or tin is mixed with silver to prevent its being consumed by fire.

But this is unreasonable in many ways. Firstly, because it comes to the same that a form can be produced in another matter, or that it can cease to be in its proper matter; wherefore all things that can be generated are corruptible, and conversely. Now it is manifest that the human form can cease to exist in this (particular) matter which is its subject: else the human body would not be corruptible. Consequently it can begin to exist in another matter, so that something else be changed into true human nature. Secondly, because in all beings whose entire matter is contained in one individual there is only one individual in the species: as is clearly the case with the sun, moon and such like. Thus there would

only be one individual of the human species. Thirdly, because multiplication of matter cannot be understood otherwise than either in respect of quantity only, as in things which are rarefied, so that their matter increases in dimensions; or in respect of the substance itself of the matter. But as long as the substance alone of matter remains, it cannot be said to be multiplied; for multitude cannot consist in the addition of a thing to itself, since of necessity it can only result from division. Therefore some other substance must be added to matter, either by creation, or by something else being changed into it. Consequently no matter can be multiplied save either by rarefaction as when air is made from water; or by the change of some other things, as fire is multiplied by the addition of wood; or lastly by creation. Now it is manifest that the multiplication of matter in the human body does not occur by rarefaction: for thus the body of a man of perfect age would be more imperfect than the body of a child. Nor does it occur by creation of flesh matter: for, according to Gregory (Moral. xxxii): "All things were created together as to the substance of matter, but not as to the specific form." Consequently the multiplication of the human body can only be the result of the food being changed into the true human nature. Fourthly, because, since man does not differ from animals and plants in regard to the vegetative soul, it would follow that the bodies of animals and plants do not increase through a change of nourishment into the body so nourished, but through some kind of multiplication. Which multiplication cannot be natural: since the matter cannot naturally extend beyond a certain fixed quantity; nor again does anything increase naturally, save either by rarefaction or the change of something else into it. Consequently the whole process of generation and nourishment, which are called "natural forces," would be miraculous. Which is altogether inadmissible.

Wherefore others have said that the human form can indeed begin to exist in some other matter, if we consider the human nature in general: but not if we consider it as in this individual. For in the individual the form remains confined to a certain determinate matter, on which it is first imprinted at the generation of that individual, so that it never leaves that matter until the ultimate dissolution of the individual. And this matter, say they, principally belongs to the true human nature. But since this matter does not suffice for the requisite quantity, some other matter must be added, through the change of food into the substance of the individual partaking thereof, in such a quantity as suffices for the increase required. And this matter, they state, belongs secondarily to the true human nature: because it is not required for the primary existence of the individual, but for the quantity due to him. And if anything further is produced from the food, this does not belong to true human nature, properly speaking. However, this also is inadmissible. First, because this opinion judges of living bodies as of inanimate bodies; in which, although there be a power of generating their like in species, there

is not the power of generating their like in the individual; which power in living bodies is the nutritive power. Nothing, therefore, would be added to living bodies by their nutritive power, if their food were not changed into their true nature. Secondly, because the active seminal power is a certain impression derived from the soul of the begetter, as stated above (q. 118, a. 1). Hence it cannot have a greater power in acting, than the soul from which it is derived. If, therefore, by the seminal power a certain matter truly assumes the form of human nature, much more can the soul, by the nutritive power, imprint the true form of human nature on the food which is assimilated. Thirdly, because food is needed not only for growth, else at the term of growth, food would be needful no longer; but also to renew that which is lost by the action of natural heat. But there would be no renewal, unless what is formed from the food, took the place of what is lost. Wherefore just as that which was there previously belonged to true human nature, so also does that which is formed from the food.

Therefore, according to others, it must be said that the food is really changed into the true human nature by reason of its assuming the specific form of flesh, bones and such like parts. This is what the Philosopher says (De Anima ii, 4): "Food nourishes inasmuch as it is potentially flesh."

Reply to Objection 1. Our Lord does not say that the "whole" of what enters into the mouth, but "all"—because something from every kind of food is cast out into the privy. It may also be said that whatever is generated from food, can be dissolved by natural heat, and be cast aside through the pores, as Jerome expounds the passage.

Reply to Objection 2. By flesh belonging to the species, some have understood that which first receives the human species, which is derived from the begetter: this, they say, lasts as long as the individual does. By flesh belonging to the matter these understand what is generated from food: and this, they say, does not always remain, but as it comes so it goes. But this is contrary to the mind of Aristotle. For he says there, that "just as in things which have their species in matter"—for instance, wood or stone—"so in flesh, there is something belonging to the species, and something belonging to matter." Now it is clear that this distinction has no place in inanimate things, which are not generated seminally, or nourished. Again, since what is generated from food is united to, by mixing with, the body so nourished, just as water is mixed with wine, as the Philosopher says there by way of example: that which is added, and that to which it is added, cannot be different natures, since they are already made one by being mixed together. Therefore there is no reason for saying that one is destroyed by natural heat, while the other remains.

It must therefore be said that this distinction of the Philosopher is not of different kinds of flesh, but of the same flesh considered from different points of view. For

if we consider the flesh according to the species, that is, according to that which is formed therein, thus it remains always: because the nature of flesh always remains together with its natural disposition. But if we consider flesh according to matter, then it does not remain, but is gradually destroyed and renewed: thus in the fire of a furnace, the form of fire remains, but the matter is gradually consumed, and other matter is substituted in its place.

Reply to Objection 3. The “radical humor” is said to comprise whatever the virtue of the species is founded on. If this be taken away it cannot be renewed; as when a man’s hand or foot is amputated. But the “nutritive humor” is that which has not yet received perfectly the specific nature, but is on the way thereto; such is the blood, and the like. Wherefore if such be taken away, the virtue of the species remains in its root, which is not destroyed.

Reply to Objection 4. Every virtue of a passible body is weakened by continuous action, because such agents are also patient. Therefore the transforming virtue is strong at first so as to be able to transform not only enough for the renewal of what is lost, but also

for growth. Later on it can only transform enough for the renewal of what is lost, and then growth ceases. At last it cannot even do this; and then begins decline. In fine, when this virtue fails altogether, the animal dies. Thus the virtue of wine that transforms the water added to it, is weakened by further additions of water, so as to become at length watery, as the Philosopher says by way of example (De Gener. i, 5).

Reply to Objection 5. As the Philosopher says (De Gener. i, 5), when a certain matter is directly transformed into fire, then fire is said to be generated anew: but when matter is transformed into a fire already existing, then fire is said to be fed. Wherefore if the entire matter together loses the form of fire, and another matter transformed into fire, there will be another distinct fire. But if, while one piece of wood is burning, other wood is laid on, and so on until the first piece is entirely consumed, the same identical fire will remain all the time: because that which is added passes into what pre-existed. It is the same with living bodies, in which by means of nourishment that is renewed which was consumed by natural heat.

Whether the semen is produced from surplus food?

Ia q. 119 a. 2

Objection 1. It would seem that the semen is not produced from the surplus food, but from the substance of the begetter. For Damascene says (De Fide Orth. i, 8) that “generation is a work of nature, producing, from the substance of the begetter, that which is begotten.” But that which is generated is produced from the semen. Therefore the semen is produced from the substance of the begetter.

Objection 2. Further, the son is like his father, in respect of that which he receives from him. But if the semen from which something is generated, is produced from the surplus food, a man would receive nothing from his grandfather and his ancestors in whom the food never existed. Therefore a man would not be more like to his grandfather or ancestors, than to any other men.

Objection 3. Further, the food of the generator is sometimes the flesh of cows, pigs and suchlike. If therefore, the semen were produced from surplus food, the man begotten of such semen would be more akin to the cow and the pig, than to his father or other relations.

Objection 4. Further, Augustine says (Gen. ad lit. x, 20) that we were in Adam “not only by seminal virtue, but also in the very substance of the body.” But this would not be, if the semen were produced from surplus food. Therefore the semen is not produced therefrom.

On the contrary, The Philosopher proves in many ways (De Gener. Animal. i, 18) that “the semen is surplus food.”

I answer that, This question depends in some way on what has been stated above (a. 1; q. 118, a. 1). For

if human nature has a virtue for the communication of its form to alien matter not only in another, but also in its own subject; it is clear that the food which at first is dissimilar, becomes at length similar through the form communicated to it. Now it belongs to the natural order that a thing should be reduced from potentiality to act gradually: hence in things generated we observe that at first each is imperfect and is afterwards perfected. But it is clear that the common is to the proper and determinate, as imperfect is to perfect: therefore we see that in the generation of an animal, the animal is generated first, then the man or the horse. So therefore food first of all receives a certain common virtue in regard to all the parts of the body, which virtue is subsequently determinate to this or that part.

Now it is not possible that the semen be a kind of solution from what is already transformed into the substance of the members. For this solution, if it does not retain the nature of the member it is taken from, it would no longer be of the nature of the begetter, and would be due to a process of corruption; and consequently it would not have the power of transforming something else into the likeness of that nature. But if it retained the nature of the member it is taken from, then, since it is limited to a certain part of the body, it would not have the power of moving towards (the production of) the whole nature, but only the nature of that part. Unless one were to say that the solution is taken from all the parts of the body, and that it retains the nature of each part. Thus the semen would be a small animal in act; and generation of animal from animal would be a

mere division, as mud is generated from mud, and as animals which continue to live after being cut in two: which is inadmissible.

It remains to be said, therefore, that the semen is not something separated from what was before the actual whole; rather is it the whole, though potentially, having the power, derived from the soul of the begetter, to produce the whole body, as stated above (a. 1; q. 108, a. 1). Now that which is in potentiality to the whole, is that which is generated from the food, before it is transformed into the substance of the members. Therefore the semen is taken from this. In this sense the nutritive power is said to serve the generative power: because what is transformed by the nutritive power is employed as semen by the generative power. A sign of this, according to the Philosopher, is that animals of great size, which require much food, have little semen in proportion to the size of their bodies, and generated seldom; in like manner fat men, and for the same reason.

Reply to Objection 1. Generation is from the substance of the begetter in animals and plants, inasmuch as the semen owes its virtue to the form of the begetter, and inasmuch as it is in potentiality to the substance.

Reply to Objection 2. The likeness of the begetter to the begotten is on account not of the matter, but of the form of the agent that generates its like. Wherefore in order for a man to be like his grandfather, there is no

need that the corporeal seminal matter should have been in the grandfather; but that there be in the semen a virtue derived from the soul of the grandfather through the father. In like manner the third objection is answered. For kinship is not in relation to matter, but rather to the derivation of the forms.

Reply to Objection 4. These words of Augustine are not to be understood as though the immediate seminal virtue, or the corporeal substance from which this individual was formed were actually in Adam: but so that both were in Adam as in principle. For even the corporeal matter, which is supplied by the mother, and which he calls the corporeal substance, is originally derived from Adam: and likewise the active seminal power of the father, which is the immediate seminal virtue (in the production) of this man.

But Christ is said to have been in Adam according to the “corporeal substance,” not according to the seminal virtue. Because the matter from which His Body was formed, and which was supplied by the Virgin Mother, was derived from Adam; whereas the active virtue was not derived from Adam, because His Body was not formed by the seminal virtue of a man, but by the operation of the Holy Ghost. For “such a birth was becoming to Him,”*, WHO IS ABOVE ALL GOD FOR EVER BLESSED. Amen.

* Hymn for Vespers at Christmas; Breviary, O. P.

Objection 1. It would seem that none of the food is changed into true human nature. For it is written (Mat. 15:17): “Whatsoever entereth into the mouth, goeth into the belly, and is cast out into the privy.” But what is cast out is not changed into the reality of human nature. Therefore none of the food is changed into true human nature.

Objection 2. Further, the Philosopher (De Gener. i, 5) distinguishes flesh belonging to the “species” from flesh belonging to “matter”; and says that the latter “comes and goes.” Now what is formed from food comes and goes. Therefore what is produced from food is flesh belonging to matter, not to the species. But what belongs to true human nature belongs to the species. Therefore the food is not changed into true human nature.

Objection 3. Further, the “radical humor” seems to belong to the reality of human nature; and if it be lost, it cannot be recovered, according to physicians. But it could be recovered if the food were changed into the humor. Therefore food is not changed into true human nature.

Objection 4. Further, if the food were changed into true human nature, whatever is lost in man could be restored. But man’s death is due only to the loss of something. Therefore man would be able by taking food to insure himself against death in perpetuity.

Objection 5. Further, if the food is changed into true human nature, there is nothing in man which may not recede or be repaired: for what is generated in a man from his food can both recede and be repaired. If therefore a man lived long enough, it would follow that in the end nothing would be left in him of what belonged to him at the beginning. Consequently he would not be numerically the same man throughout his life; since for the thing to be numerically the same, identity of matter is necessary. But this is incongruous. Therefore the food is not changed into true human nature.

On the contrary, Augustine says (De Vera Relig. xi): “The bodily food when corrupted, that is, having lost its form, is changed into the texture of the members.” But the texture of the members belongs to true human nature. Therefore the food is changed into the reality of human nature.

I answer that, According to the Philosopher (Metaph. ii), “The relation of a thing to truth is the same as its relation to being.” Therefore that belongs to the true nature of any thing which enters into the constitution of that nature. But nature can be considered in two ways: firstly, in general according to the species; secondly, as in the individual. And whereas the form and the common matter belong to a thing’s true nature considered in general; individual signate matter, and the form individualized by that matter belong to the true nature considered in this particular individual. Thus a soul and body belong to the true human nature in general, but

to the true human nature of Peter and Martin belong this soul and this body.

Now there are certain things whose form cannot exist but in one individual matter: thus the form of the sun cannot exist save in the matter in which it actually is. And in this sense some have said that the human form cannot exist but in a certain individual matter, which, they said, was given that form at the very beginning in the first man. So that whatever may have been added to that which was derived by posterity from the first parent, does not belong to the truth of human nature, as not receiving in truth the form of human nature.

But, said they, that matter which, in the first man, was the subject of the human form, was multiplied in itself: and in this way the multitude of human bodies is derived from the body of the first man. According to these, the food is not changed into true human nature; we take food, they stated, in order to help nature to resist the action of natural heat, and prevent the consumption of the “radical humor”; just as lead or tin is mixed with silver to prevent its being consumed by fire.

But this is unreasonable in many ways. Firstly, because it comes to the same that a form can be produced in another matter, or that it can cease to be in its proper matter; wherefore all things that can be generated are corruptible, and conversely. Now it is manifest that the human form can cease to exist in this (particular) matter which is its subject: else the human body would not be corruptible. Consequently it can begin to exist in another matter, so that something else be changed into true human nature. Secondly, because in all beings whose entire matter is contained in one individual there is only one individual in the species: as is clearly the case with the sun, moon and such like. Thus there would only be one individual of the human species. Thirdly, because multiplication of matter cannot be understood otherwise than either in respect of quantity only, as in things which are rarefied, so that their matter increases in dimensions; or in respect of the substance itself of the matter. But as long as the substance alone of matter remains, it cannot be said to be multiplied; for multitude cannot consist in the addition of a thing to itself, since of necessity it can only result from division. Therefore some other substance must be added to matter, either by creation, or by something else being changed into it. Consequently no matter can be multiplied save either by rarefaction as when air is made from water; or by the change of some other things, as fire is multiplied by the addition of wood; or lastly by creation. Now it is manifest that the multiplication of matter in the human body does not occur by rarefaction: for thus the body of a man of perfect age would be more imperfect than the body of a child. Nor does it occur by creation of flesh matter: for, according to Gregory (Moral. xxxii): “All things were created together as to the substance of matter, but not as to the specific form.” Consequently the

multiplication of the human body can only be the result of the food being changed into the true human nature. Fourthly, because, since man does not differ from animals and plants in regard to the vegetative soul, it would follow that the bodies of animals and plants do not increase through a change of nourishment into the body so nourished, but through some kind of multiplication. Which multiplication cannot be natural: since the matter cannot naturally extend beyond a certain fixed quantity; nor again does anything increase naturally, save either by rarefaction or the change of something else into it. Consequently the whole process of generation and nourishment, which are called “natural forces,” would be miraculous. Which is altogether inadmissible.

Wherefore others have said that the human form can indeed begin to exist in some other matter, if we consider the human nature in general: but not if we consider it as in this individual. For in the individual the form remains confined to a certain determinate matter, on which it is first imprinted at the generation of that individual, so that it never leaves that matter until the ultimate dissolution of the individual. And this matter, say they, principally belongs to the true human nature. But since this matter does not suffice for the requisite quantity, some other matter must be added, through the change of food into the substance of the individual partaking thereof, in such a quantity as suffices for the increase required. And this matter, they state, belongs secondarily to the true human nature: because it is not required for the primary existence of the individual, but for the quantity due to him. And if anything further is produced from the food, this does not belong to true human nature, properly speaking. However, this also is inadmissible. First, because this opinion judges of living bodies as of inanimate bodies; in which, although there be a power of generating their like in species, there is not the power of generating their like in the individual; which power in living bodies is the nutritive power. Nothing, therefore, would be added to living bodies by their nutritive power, if their food were not changed into their true nature. Secondly, because the active seminal power is a certain impression derived from the soul of the begetter, as stated above (q. 118, a. 1). Hence it cannot have a greater power in acting, than the soul from which it is derived. If, therefore, by the seminal power a certain matter truly assumes the form of human nature, much more can the soul, by the nutritive power, imprint the true form of human nature on the food which is assimilated. Thirdly, because food is needed not only for growth, else at the term of growth, food would be needful no longer; but also to renew that which is lost by the action of natural heat. But there would be no renewal, unless what is formed from the food, took the place of what is lost. Wherefore just as that which was there previously belonged to true human nature, so also does that which is formed from the food.

Therefore, according to others, it must be said that the food is really changed into the true human nature by

reason of its assuming the specific form of flesh, bones and such like parts. This is what the Philosopher says (De Anima ii, 4): “Food nourishes inasmuch as it is potentially flesh.”

Reply to Objection 1. Our Lord does not say that the “whole” of what enters into the mouth, but “all”—because something from every kind of food is cast out into the privy. It may also be said that whatever is generated from food, can be dissolved by natural heat, and be cast aside through the pores, as Jerome expounds the passage.

Reply to Objection 2. By flesh belonging to the species, some have understood that which first receives the human species, which is derived from the begetter: this, they say, lasts as long as the individual does. By flesh belonging to the matter these understand what is generated from food: and this, they say, does not always remain, but as it comes so it goes. But this is contrary to the mind of Aristotle. For he says there, that “just as in things which have their species in matter”—for instance, wood or stone—“so in flesh, there is something belonging to the species, and something belonging to matter.” Now it is clear that this distinction has no place in inanimate things, which are not generated seminally, or nourished. Again, since what is generated from food is united to, by mixing with, the body so nourished, just as water is mixed with wine, as the Philosopher says there by way of example: that which is added, and that to which it is added, cannot be different natures, since they are already made one by being mixed together. Therefore there is no reason for saying that one is destroyed by natural heat, while the other remains.

It must therefore be said that this distinction of the Philosopher is not of different kinds of flesh, but of the same flesh considered from different points of view. For if we consider the flesh according to the species, that is, according to that which is formed therein, thus it remains always: because the nature of flesh always remains together with its natural disposition. But if we consider flesh according to matter, then it does not remain, but is gradually destroyed and renewed: thus in the fire of a furnace, the form of fire remains, but the matter is gradually consumed, and other matter is substituted in its place.

Reply to Objection 3. The “radical humor” is said to comprise whatever the virtue of the species is founded on. If this be taken away it cannot be renewed; as when a man’s hand or foot is amputated. But the “nutritive humor” is that which has not yet received perfectly the specific nature, but is on the way thereto; such is the blood, and the like. Wherefore if such be taken away, the virtue of the species remains in its root, which is not destroyed.

Reply to Objection 4. Every virtue of a passible body is weakened by continuous action, because such agents are also patient. Therefore the transforming virtue is strong at first so as to be able to transform

not only enough for the renewal of what is lost, but also for growth. Later on it can only transform enough for the renewal of what is lost, and then growth ceases. At last it cannot even do this; and then begins decline. In fine, when this virtue fails altogether, the animal dies. Thus the virtue of wine that transforms the water added to it, is weakened by further additions of water, so as to become at length watery, as the Philosopher says by way of example (De Gener. i, 5).

Reply to Objection 5. As the Philosopher says (De Gener. i, 5), when a certain matter is directly transformed into fire, then fire is said to be generated anew:

but when matter is transformed into a fire already existing, then fire is said to be fed. Wherefore if the entire matter together loses the form of fire, and another matter transformed into fire, there will be another distinct fire. But if, while one piece of wood is burning, other wood is laid on, and so on until the first piece is entirely consumed, the same identical fire will remain all the time: because that which is added passes into what pre-existed. It is the same with living bodies, in which by means of nourishment that is renewed which was consumed by natural heat.

Objection 1. It would seem that the semen is not produced from the surplus food, but from the substance of the begetter. For Damascene says (*De Fide Orth.* i, 8) that “generation is a work of nature, producing, from the substance of the begetter, that which is begotten.” But that which is generated is produced from the semen. Therefore the semen is produced from the substance of the begetter.

Objection 2. Further, the son is like his father, in respect of that which he receives from him. But if the semen from which something is generated, is produced from the surplus food, a man would receive nothing from his grandfather and his ancestors in whom the food never existed. Therefore a man would not be more like to his grandfather or ancestors, than to any other men.

Objection 3. Further, the food of the generator is sometimes the flesh of cows, pigs and suchlike. If therefore, the semen were produced from surplus food, the man begotten of such semen would be more akin to the cow and the pig, than to his father or other relations.

Objection 4. Further, Augustine says (*Gen.* ad lit. x, 20) that we were in Adam “not only by seminal virtue, but also in the very substance of the body.” But this would not be, if the semen were produced from surplus food. Therefore the semen is not produced therefrom.

On the contrary, The Philosopher proves in many ways (*De Gener. Animal.* i, 18) that “the semen is surplus food.”

I answer that, This question depends in some way on what has been stated above (a. 1; q. 118, a. 1). For if human nature has a virtue for the communication of its form to alien matter not only in another, but also in its own subject; it is clear that the food which at first is dissimilar, becomes at length similar through the form communicated to it. Now it belongs to the natural order that a thing should be reduced from potentiality to act gradually: hence in things generated we observe that at first each is imperfect and is afterwards perfected. But it is clear that the common is to the proper and determinate, as imperfect is to perfect: therefore we see that in the generation of an animal, the animal is generated first, then the man or the horse. So therefore food first of all receives a certain common virtue in regard to all the parts of the body, which virtue is subsequently determinate to this or that part.

Now it is not possible that the semen be a kind of solution from what is already transformed into the substance of the members. For this solution, if it does not retain the nature of the member it is taken from, it would no longer be of the nature of the begetter, and would be due to a process of corruption; and consequently it would not have the power of transforming something else into the likeness of that nature. But if it retained the nature of the member it is taken from, then, since it is limited to a certain part of the body, it would not

have the power of moving towards (the production of) the whole nature, but only the nature of that part. Unless one were to say that the solution is taken from all the parts of the body, and that it retains the nature of each part. Thus the semen would be a small animal in act; and generation of animal from animal would be a mere division, as mud is generated from mud, and as animals which continue to live after being cut in two: which is inadmissible.

It remains to be said, therefore, that the semen is not something separated from what was before the actual whole; rather is it the whole, though potentially, having the power, derived from the soul of the begetter, to produce the whole body, as stated above (a. 1; q. 108, a. 1). Now that which is in potentiality to the whole, is that which is generated from the food, before it is transformed into the substance of the members. Therefore the semen is taken from this. In this sense the nutritive power is said to serve the generative power: because what is transformed by the nutritive power is employed as semen by the generative power. A sign of this, according to the Philosopher, is that animals of great size, which require much food, have little semen in proportion to the size of their bodies, and generated seldom; in like manner fat men, and for the same reason.

Reply to Objection 1. Generation is from the substance of the begetter in animals and plants, inasmuch as the semen owes its virtue to the form of the begetter, and inasmuch as it is in potentiality to the substance.

Reply to Objection 2. The likeness of the begetter to the begotten is on account not of the matter, but of the form of the agent that generates its like. Wherefore in order for a man to be like his grandfather, there is no need that the corporeal seminal matter should have been in the grandfather; but that there be in the semen a virtue derived from the soul of the grandfather through the father. In like manner the third objection is answered. For kinship is not in relation to matter, but rather to the derivation of the forms.

Reply to Objection 4. These words of Augustine are not to be understood as though the immediate seminal virtue, or the corporeal substance from which this individual was formed were actually in Adam: but so that both were in Adam as in principle. For even the corporeal matter, which is supplied by the mother, and which he calls the corporeal substance, is originally derived from Adam: and likewise the active seminal power of the father, which is the immediate seminal virtue (in the production) of this man.

But Christ is said to have been in Adam according to the “corporeal substance,” not according to the seminal virtue. Because the matter from which His Body was formed, and which was supplied by the Virgin Mother, was derived from Adam; whereas the active virtue was not derived from Adam, because His Body was not formed by the seminal virtue of a man, but by the opera-

tion of the Holy Ghost. For “such a birth was becoming BLESSED. Amen.
